# 1. Introduction

Extend is a declarative programming language meant to support spreadsheet-like functionality. It contains features such as complex calculations on large inputs of data, side-effect free and immutable values, and automatic formula adjustments relative to rows and columns. Extend is compiled to the LLVM (Low Level Virtual Machine) intermediate representation, which in turn is reduced to machine assembly. Extend takes inspiration from software such as Microsoft Excel, which allows users to link several formulae on dependent groups of data together, but takes this technology a step further by allowing users to encapsulate such calculations as functions.

## 1.1 Inspiration & Use Cases

### Inspiration

The design goal of our language was to be "a spreadsheet you can compile". Extend was conceptualized to address the limitations that prevented the spreadsheet environment from evolving into a compiled, flexible programming language. To create this, there were three main things that needed to be changed about the way interactive spreadsheets work:

- The language needs reusable functions as opposed to having to copy & paste a block of cells.
- Cell ranges need to be created with dynamic runtime-determined decisions.
- In order to support more complex data structures, we must allow complex content within cells as opposed to single numbers or strings.

With these changes in mind, we attempted to keep the semantics as similar as possible to traditional spreadsheet programs; this meant implementing a dynamically typed language that is fairly forgiving to the user.

Microsoft Excel and Google Sheets find issues at scale when users need to process more and more complicated calculations on several different sets of data, sometimes at scheduled intervals. Extend was conceptualized as a standalone application that removes the manual element of entering new inputs. It brings the best of spreadsheets and computation into one product.

### Complex Calculations Across Many Inputs

Extend is spiritually closer in behavior to Microsoft Excel than other conventional programming languages. Extend can nest basic operations in cells of a range, Extend's proprietary data type, and apply mathematical operations on both individual cells of a range and the entire range itself. A dependency graph is evaluated at runtime to optimize and execute these calculations.

### Flexibility

Extend, as a declarative language, allows you to keep dimensional values potentially variable until runtime, and handles some errors with the "empty" keyword, which persists throughout calculation instead of

crashing the program. It supports a range of standard library functions that are additionally supported in conventional spreadsheet technology as well.

## 2. Language Reference Manual

### 2.1 Introduction to Extend

Extend is a domain-specific programming language used to designate ranges of cells as reusable functions. It is a dynamically-typed, statically-scoped, declarative language that uses lazy evaluation to carry out computations. Once computed, all values are immutable. In order to offer the best performance, Extend compiles down to LLVM.

Extend's syntax is meant to provide clear punctuation and easily understandable cell range access specifications, while borrowing elements from languages with C-style syntax for ease of development. Despite these syntactic similarities, the semantics of an Extend program have more in common with a spreadsheet such as Microsoft Excel than imperative languages such as C, Java or Python.

### 2.2 Structure of an Extend Program

An Extend program consists of one or more source files. A source file can contain any number of import directives, function definitions, global variable declarations, and external library declarations, in any order.

#### Import Statements

Import statements in Extend are written with `import`, followed by the name of a file in double quotes, and terminated with a semicolon. The syntax is as follows:

```
1 import "string.xtnd";
```

Extend imports act like `#include` in C, except that multiple imports of the same file are ignored. The imports are all aggregated into a single namespace.

#### Function Definitions

Function definitions comprise the bulk of an Extend program. In short, a function consists of a set of variable declarations, formula assignments, and a return expression. Each variable consists of cells; the values of each cell are, if necessary, calculated according to formulas which each apply to a specified subset of the cells. Each cell value, once calculated, is immutable. A couple examples follow for context; functions are described in detail in section 2.5.

```
1 isNumber(x) {
2     return type(x) == "Number";
3 }
4
5 sum_column([m,1] rng) {
6     /* Returns the sum of the values in the column, skipping any values that are non-
7        numeric */
7     [m,1] running_sum;
8     running_sum[0,0] = #rng;
```

```

9   running_sum[1:,0] = running_sum[[-1],] + (isNumber(#rng) ? #rng : 0);
10  return running_sum[-1];
11 }

```

## Global Variables

In essence, global variable declarations function as constants in Extend. They are written with the keyword **global**, followed by a variable declaration in the combined variable declaration and assignment format described in section 2.5. As with local variables, the cell values of a global variable, once computed, are immutable. A few examples follow:

```

1 global pi := 3.14159265359;
2 global num_points := 24;
3 global [num_points,1]
4   circle_x_vals := cos(2 * pi * row() / num_points),
5   circle_y_vals := sin(2 * pi * row() / num_points);

```

## External Library Declarations

An external library is declared with the **extern** keyword, followed by the name of an object file in double quotes, followed by a semicolon-delimited list of external function declarations enclosed by curly braces. A library declaration informs the compiler of the functions' names and signatures and instructs the compiler to link the object file when producing an executable. An external function declared as **foo** will call an appropriately written C function **extend\_foo**. An example follows:

```

1 extern "mylib.o" {
2   foo(arg1, arg2);
3   bar();
4 }

```

This declaration would cause the compiler to link **mylib.o** and would make the C functions **extend\_foo** and **extend\_bar** available to Extend programs as **foo** and **bar** respectively. The required signature and format of the external functions is specified precisely in section 2.5.

## main function

When a compiled Extend program is executed, the **main** function is evaluated. All computations necessary to calculate the return value of the function are performed, after which the program terminates. The **main** function must be a function of a single argument, conventionally denoted **args**, which is guaranteed to be a 1-by-n range containing the command line arguments.

## Scoping and Namespace

For functions and for global variables, there is a single namespace that is shared between all files composing an Extend program, and they are visible throughout the entire program. Functions declared in external libraries share this namespace as well. For a local variable, the scope is the entire body of the function in which it is defined. Functions may declare local variables sharing a name with a global variable; inside that function, the name will refer to the local variable.

```

1 global x := "I'm a global";
2
3 foo() {
4   y := x; // Scope of x is entire function
5   x := "In here I'm a local";
6   return y; // Returns "In here I'm a local"

```

```

7 }
8
9 bar(x) {
10     return x; // Parameters mask globals; returns argument
11 }
12
13 baz() {
14     return x; // Returns "I'm a global"
15 }

```

## 2.3 Types and Literals

Extend has three primitive data types, **Number**, **String**, and **Empty**, and one composite type, **Range**.

### Primitive Data Types

A **Number** is an immutable primitive value corresponding to a double-precision 64-bit binary format IEEE 754 value. Numbers can be written in an Extend source file as either integer or floating point constants; both are represented internally as floating-point values. There is no separate type representing an integer.

A **String** is an immutable primitive value that is internally represented a C-style null-terminated byte array corresponding to ASCII values. A String can be written in an Extend source file as a sequence of characters enclosed in double quotes, with the usual escaping conventions. Extend does not allow for slicing of strings to access specific characters; access to the contents of a string will only be available through standard library functions.

The **Empty** type can be written as the keyword **empty**, and serves a similar function to NULL in SQL; it represents the absence of a value.

Primitive Data Types	Examples
Number	42 or -5 or 2.71828 or 314159e-5
String	"Hello, World!\n" or "foo" or ""
Empty	empty

### Ranges

Extend has one composite type, **Range**. A range borrows conceptually from spreadsheets; it is a group of cells with two dimensions, described as rows and columns. Each cell is assigned a formula that either evaluates to a Number, a String, **empty**, or another Range. Cell formulas are described in detail in section 2.5. A range can either be declared as described in section 2.5 or with a range literal expression. Ranges can be nested arbitrarily deeply and can be used to represent (immutable) lists, matrices, or more complicated data structures.

### Range Literals

A range literal is a semicolon-delimited list of rows, enclosed in curly brackets. Each row is a comma-delimited list of numbers, strings, or range literals. A few examples follow:

```

1 legal_ranges() {
2     r1 := {"Don't"; "Panic"}; // two rows, one column
3     r2 := {"Don't", "Think", "Twice"}; // one row, three columns
4     r3 := {1,2,3;4,5,6;7,8,9}; // three rows, three columns
5     r4 := {"Hello";0,1,2,3,4}; // two rows, five columns

```

```
6   r5 := {{{{{1}}}}}; // one row, one column
7   r7 := {-1.5,-2.5,{-2,"nested"},-3.5}; // one row, four columns
8   return 0;
9 }
```

## 2.4 Expressions

Expressions in Extend allow for arithmetic and boolean operations, function calls, conditional branching, extraction of contents of other variables, string concatenation, and determination of the location of the cell containing the expression. The sections for boolean and conditional operators refer to **truthy** and **falsey** values: the **Number** 0 is the only falsey value; all other values are **truthy**. As **empty** represents the absence of a value, it is neither **truthy** nor **falsey**.

## Arithmetic Operators

The arithmetic operators listed below take one or two expressions and return a number, if both expressions are Numbers, or **empty** otherwise. Operators grouped within the same inner box have the same level of precedence, and are listed from highest precedence to lowest precedence. All of the binary operators are infix operators, and, with the exception of exponentiation, are left-associative. Exponentiation, bitwise negation, and unary negation are right-associative. All of the unary operators are prefix operators. The bitwise operators round their operands to the nearest signed 32-bit integer (rounding half to even) before performing the operation and evaluate to a Number.

Operator	Description	Definition
<code>~</code>	Bitwise NOT	Performs a bitwise negation on the binary representation of an expression.
<code>-</code>	Unary negation	A simple negative sign to negate expressions.
<code>**</code>	Power	Returns the first expression raised to the power of the second expression
<code>*</code>	Multiplication	Multiplies two expressions
<code>/</code>	Division	Divides first expression by second.
<code>%</code>	Modulo	Finds the remainder by dividing the expression on the left side of the modulo by the right side expression.
<code>&lt;&lt;</code>	Left Shift	Performs a bitwise left shift on the binary representation of an expression.
<code>&gt;&gt;</code>	Right Shift	Performs a sign-propagating bitwise right shift on the binary representation of an expression.
<code>&amp;</code>	Bitwise AND	Performs a bitwise AND between two expressions.
<code>+</code>	Addition	Adds two expressions together.
<code>-</code>	Subtraction	Subtracts second expression from first.
<code> </code>	Bitwise OR	Performs a bitwise OR between two expressions.
<code>^</code>	Bitwise XOR	Performs a bitwise exclusive OR between two expressions.

```
1 easy() {  
2   return 3 - -3 ** 2 %5; //-1  
3 }  
4 g_eazy() {  
5   return (((1 << 2 | 1) << 2) | 1) << 1; //42  
6 }
```

## Boolean Operators

These operators take one or two expressions and evaluate to **empty**, 0 or 1. Operators grouped within the same inner box have the same level of precedence and are listed from highest precedence to lowest precedence. All of these operators besides logical negation are infix, left-associative operators. The logical AND and OR operators feature short-circuit evaluation. Logical NOT is a prefix, right-associative operator. Besides logical NOT, all boolean operators have lower precedence than all arithmetic operators. For Strings, the boolean operators `<`, `<=`, `>`, and `>=` implement case-sensitive lexicographic comparison.

Operator	Description	Definition
!	Logical NOT	Evaluates to 0 or 1 given a truthy or falsey value respectively. <code>!empty</code> evaluates to <code>empty</code> . It has equal precedence with <code>and</code> and unary minus.
==	Equals	Always evaluates to 0 if the two expressions have different types. If both expressions are primitive values, evaluates to 1 if they have the same type and the same value, or 0 otherwise. If both expressions are ranges, evaluates to 1 if the two ranges have the same dimensions and each cell of the first expression == the corresponding cell of the second expression. <code>empty == empty</code> evaluates to 1. Strings are compared by value.
!=	Not equals	<code>x != y</code> is equivalent to <code>!(x == y)</code> .
<	Less than	If the expressions are both Numbers or both Strings and the first expression is less than the second, evaluates to 1. If the expressions are both Numbers or both Strings and the first expression is greater than or equal to the second, evaluates to 0. Otherwise, evaluates to <code>empty</code> .
>	Greater than	Equivalent rules about typing as for <.
<=	Less than or equal to	Equivalent rules about typing as for <.
>=	Greater than or equal to	Equivalent rules about typing as for <.
&&	Short-circuit Logical AND	If the first expression is falsey or <code>empty</code> , evaluates to 0 or <code>empty</code> respectively. Otherwise, if the second expression is truthy, falsey, or <code>empty</code> , evaluates to 1, 0, or <code>empty</code> respectively.
	Short-circuit Logical OR	If the first expression is truthy or <code>empty</code> , evaluates to 1 or <code>empty</code> respectively. Otherwise, if the second expression is truthy, falsey, or <code>empty</code> , evaluates to 1, 0, or <code>empty</code> respectively.

```

1 somethings_false() {
2   return !1 != !1 || 4 <= 3;
3 }
4 somethings_empty() {
5   return empty || empty <= !3 || 5 > 3;
6 }
7 somethings_true() {
8   return 6 > 2 && !(1 == !1);
9 }

```

## Conditional Expressions

There are two types of conditional expressions: a simple ternary if-then-else expression and a **switch** expression which can represent more complex logic.

### Ternary Expressions

A ternary expression, written either as `cond-expr ? expr-if-true : expr-if-false` or, equivalently, `if(cond-expr, expr-if-true, expr-if-false)` evaluates to `expr-if-true` if `cond-expr` is truthy, or `expr-if-false` if `cond-expr` is falsey. If `cond-expr` is empty, the expression evaluates to `empty`. Both `expr-if-true` and `expr-if-false` are mandatory. `expr-if-true` is only evaluated if `cond-expr` is truthy, and `expr-if-false` is only evaluated if `cond-expr` is falsey. If `cond-expr` is empty, neither expression is evaluated. The ternary operator `? :` has the lowest precedence level of all operators.

### Switch Expressions

A **switch** expression takes a optional condition, and a list of cases and expressions that the overall expression should evaluate to if the case applies. In the event that multiple cases are true, the expression of the first matching case encountered will be evaluated. An example is provided below:

```
1 switch_example(foo) {
2   return switch (foo) {
3     case 2: "foo is 2";
4     case 3,4: "foo is 3 or 4";
5     default: "none of the above";
6   };
7 }
8
9 alternate_format(foo) {
10  return switch {
11    case foo == 2:
12      "foo is 2";
13    case foo == 3, foo == 4:
14      "foo is 3 or 4";
15    default:
16      "none of the above";
17  };
18 }
```

The format for a **switch** statement is the keyword **switch**, optionally followed by pair of parentheses containing an expression **switch-expr**, followed by a list of case clauses enclosed in curly braces and delimited by semicolons. A case clause consists of the keyword **case** followed by a comma-separated list of expressions **case-expr1** [, **case-expr2**, [...]], a colon, and an expression **match-expr**, or the keyword **default**, a colon, and an expression **default-expr**. If **switch-expr** is omitted, the **switch** expression evaluates to the **match-expr** for the first case where one of the **case-exprs** is truthy, or **default-expr** if none of the **case-exprs** apply. If **switch-expr** is present, the **switch** expression evaluates to the **match-expr** for the first case where one of the **case-exprs** is equal (with equality defined as for the `==` operator) to **switch-expr**, or **default-expr** if none of the **case-exprs** apply.

The **switch** expression can be used to compactly represent what in most imperative languages would require a long string such as `if (cond1) {...} else if (cond2) {...}`. The **switch** operator is internally converted to an equivalent (possibly nested) ternary expression; as a result, it features short-circuit evaluation throughout.

## Additional Operators

There are four additional operators available to determine the size and type of other expressions. In addition, the infix `+` operator is overloaded to perform string concatenation.

Operator	Description	Definition
<code>size(expr)</code>	Dimensions	Evaluates to a Range consisting of one row and two columns; the first cell contains the number of rows of <code>expr</code> and the second contains the number of columns. If <code>expr</code> is a Number, a String, or Empty, both cells will contain 1.
<code>type(expr)</code>	Value Type	Evaluates to "Number", "String", "Range", or "Empty".
<code>row()</code>	Row Location	No arguments; returns the row of the cell that is being calculated
<code>column()</code>	Column Location	No arguments; returns the column of the cell that is being calculated
<code>+</code>	String concatenation	"Hello, " + "World!\n" == "Hello, World!\n"

Given `[5,5]foo`, then `foo[1,4] = row() * 2 + col()` will evaluate to 6.

## Function Calls

A function expression consists of an identifier and an optional list of expressions enclosed in parentheses and separated by commas. The value of the expression is the result of applying the function to the arguments passed in as expressions. The arguments are evaluated from left to right before the function is called. For more detail, see section 2.5.

## Range Expressions

Range expressions are used to select part or all of a range. A range expression consists of a bare identifier, a bare range literal, or an expression and a selector. If a range expression has exactly 1 row and 1 column, the value of the expression is the value of the single cell of the range. If it has more than 1 row or more than 1 column, the value of the expression is the selected range. If the range has zero or fewer rows or zero or fewer columns, the value of the expression is `empty`. If a range expression with a selector would access a row index or column index greater than the number of rows or columns of the range, or a negative row or column index, the value of the expression is `empty`.

## Slices

A slice consists of an optional integer literal or expression `start`, a colon, and an optional integer literal or expression `end`, or a single integer literal or expression `index`. If `start` is omitted, it defaults to 0. If `end` is omitted, it defaults to the length of the dimension. A single `index` with no colon is equivalent to `index:index+1`. Enclosing `start` or `end` in square brackets is equivalent to the expression `row() + start` or `row() + end`, for a row slice, or `column() + start` or `column() + end` for a column slice. The slice includes `start` and excludes `end`, so the length of a slice is `end - start`. A negative value is interpreted as the length of the dimension minus the value. As mentioned above, the value of a range that is not 1 by 1 is a range, but the value of a 1 by 1 range is essentially dereferenced to the result of the cell formula.

## Selections

A selection expression consists of an expression and a pair of slices separated by a comma and enclosed in square brackets, i.e. `[row_slice, column_slice]`. If one of the dimensions of the range has length 1, the comma and the slice for that dimension can be omitted. If the comma is present but a slice is omitted, that slice defaults to `[0]` for a slice corresponding to a dimension of length greater than one, or `0` for a slice corresponding to a dimension of length one.

## Corresponding Cell

A very common selection to make is the cell in the "corresponding location" of a different variable. Since this case is so common, `#var` is syntactic sugar for `var[,]`. As a result, if `var` has more than column and more than one row, `#var` is equivalent to `var[row()],column()]`. If `var` has multiple rows and one column, it is equivalent to `var[row(),0]`. If `var` has one row and multiple columns, it is equivalent to `var[0,column()]`; and if `var` has one row and one column, it is equal to `var[0,0]`.

## Selection Examples

```
1 selection_examples() {
2   foo[0,2] /* This evaluates to the cell value in the first row and third column. */
3   foo[0,:] /* Evaluates to the range of cells in the first row of foo. */
4   foo[:,2] /* Evaluates to the range of cells in the third column of foo. */
5   foo[:,[1]] /* The internal brackets denote RELATIVE notation.
6   In this case, 1 column right of the column of the left-hand-side cell. */
7
8   foo[3,] /* Equivalent to foo[3,[0]] if foo has more than one column
9   or foo[3,0] if foo has one column */
10
11  foo[5:, 7:] /* All cells starting from the 6th row and 8th column to the bottom
12             right */
13
14  foo[[1]:[2], 0:[7]]
15  /* Selects the rows between the 1st and 2nd row after LHS row, and
16     all the columns up to the 7th column to the right of the LHS column */
17
18  /* In this example, each cell of bar would be equal to the cell
19     * in foo in the equivalent location plus 1. */
20  [5,5] foo;
21  [5,5] bar := #foo + 1; // #foo = foo[[0],[0]]
22
23  /* In this example, bar would be a 3x5 range where in each row,
24     * the value in bar is equal to the value in foo in the same column.
25     * In other words, each row of bar would be a copy of foo. */
26  [1,5] foo; // foo has 1 row, 5 columns
27  [3,5] bar := #foo; // #foo = foo[0,[0]]
28
29  /* In this example, the values of baz would be
30     * 11, 12, 13 in the first row;
31     * 21, 22, 23 in the second row;
32     * 31, 32, 33 in the third row. */
33  foo := {1,2,3}; // 1 row, 3 columns
34  bar := {10;20;30}; // 3 rows, 1 column
35  [3,3] baz := #foo + #bar; // Equivalent to foo[0,[0]] + bar[[0],0]
36 }
```

## Precedence Expressions

A precedence expression is used to force the evaluation of one expression before another, when that order of operation is required for functions with side-effects. It consists of an expression `prec-expr`, the precedence operator `->`, and an expression `succ-expr`. The value of the expression is `succ-expr`, but the value of `prec-expr` will be calculated first and the result ignored. All functions written purely in Extend are free of side effects. However, some of the external functions provided by the standard library, such as for file I/O and plotting, do have side effects. The precedence operator has the second-lowest grammatical precedence of all operators, higher only than the ternary operator.

## 2.5 Functions

The bulk of an Extend program consists of functions. Although Extend has some features, such as immutability and lazy evaluation, that are inspired by functional languages, its functions are not *first class objects*. By default, the standard library is automatically compiled and linked with a program, but there are no functions built into the language itself.

### Format

As in most programming languages, the header of the function declares the parameters it accepts. The body of the function consists of an optional set of variable declarations and formula assignments, which can occur in any order, and a return statement, which must be the last statement in the function body. All variable declarations and formula assignments, in addition to the return statement, must be terminated by a semicolon. This very simple function returns whatever value is passed into it:

```
1  foo(arg) {  
2      return arg;  
3  }
```

### Variable Declarations

A variable declaration associates an identifier with a range of cells of the specified dimensions, which are listed in square brackets before the identifier. For convenience, if the square brackets and dimensions are omitted, the identifier will be associated with a single cell. In addition, multiple identifiers, separated by commas, can be listed after the dimensions; all of these identifiers will be separate ranges, but with equal dimension sizes. The dimensions can be specified as any valid expression that evaluates to a Number, which will be rounded to the nearest signed 32-bit integer. If either dimension is zero or negative, or if the expression does not evaluate to a Number, a runtime error causing the program to halt will occur.

```
1  [2, 5] foo; // Declares foo as a range with 2 rows and 5 columns  
2  [m, n] bar; // Declares bar as a range with m rows and n columns  
3  [3, 3] ham, eggs, spam; // Declares ham, eggs and spam as distinct 3x3 ranges  
4  baz; // Declares baz as a single cell
```

### Formula Assignment

A formula assignment assigns an expression to a subset of the cells of a variable. Unlike most imperative languages, this expression is not immediately evaluated, but is instead only evaluated if and when it is needed to calculate the return value of the function. A formula assignment consists of an identifier, an optional pair of slices enclosed in square brackets specifying the subset of the cells that the assignment applies to, an `=`, and an expression, followed by a semicolon. As with the expressions specifying the dimensions of a range, these slices specifying the cell subset can contain arbitrary expressions, as long as the expression taken as a

whole evaluates to a Number, which will be rounded to the nearest signed 32-bit integer. Negative numbers are legal in these slices, and correspond to (dimension length + value).

```
1 [5, 2] foo, bar, baz; // Declares foo, bar, and baz as distinct 5x2 ranges
2 foo[0,0] = 42; // Assigns the expression 42 to the first cell of the first row of foo
3 foo[0,1] = foo[0,0] * 2; // Assigns (foo[0,0] * 2) to the 2nd cell of the 1st row of
   foo
4 bar = 3.14159; // Assigns pi to every cell of every row of bar
5 baz[1:-1,0:1] = 2.71828; // Assigns e to cells (1,0) through (3,1), inclusive, of baz
6
7 /* The next line assigns foo[[-1],0] + 2 to every cell in
8    both columns of foo, besides the first row */
9 foo[1:,: ] = foo[[-1],0] + 2;
```

The last line of the source snippet above demonstrates the idiomatic Extend way of simulating an imperative language's loop; `foo[4,0]` would evaluate to  $42+2+2+2+2 = 50$  and `foo[4,1]` would evaluate to  $(42*2)+2+2+2+2 = 92$ .

### Combined Variable Declaration and Formula Assignment

For convenience, a variable declaration and a formula assignment to all cells of that variable can be combined on a single line by inserting a `:=` and an expression after the identifier. Multiple variables and assignments, separated by commas, can be declared on a single line as well. All global variables must be defined using the combined declaration and formula assignment syntax.

```
1 /* Creates two 2x2 ranges; every cell of foo evaluates to 1 and every cell of
2    bar evaluates to 2. */
3 [2,2] foo := 1, bar := 2;
```

### Formula Assignment Errors

If the developer writes code in such a way that more than one formula applies to a cell, a runtime error will occur if the cell's value is required to compute the return expression. If there is no formula assigned to a cell, the cell will evaluate to `empty`.

### Parameter Declarations

Parameters can be declared with or without dimensions. If dimensions are declared, they can either be specified as integer literals or as identifiers. If a dimension is specified as an integer literal, the program will verify the dimension of the argument before beginning to evaluate the return expression; if it does not match, a runtime error will occur causing the program to halt. If it is specified as an identifier, that variable will contain the dimension size and will be available inside the function body. If the same identifier is repeated in the function declaration, the program will verify that every parameter dimension with that identifier has equal dimension size; if they differ, a runtime error will occur causing the program to halt. A few examples follow:

```
1 number_of_cells([m,n] arg) {
2   return m*n; // m and n are initialized with the dimensions of arg
3 }
4
5 die_unless_primitive([1,1] arg) {
6   return 0; // If arg is not a primitive value, a runtime error will occur
7 }
8
9 num_cells_if_column_vector([m,1] arg) {
10  // If arg has one column, return number of cells; otherwise runtime error
```

```

11     return m;
12 }
13
14 die_unless_square([m,m] arg) {
15     return 0; // Runtime error if number of rows != number of columns
16 }
17
18 num_cells_if_same_size([m,n] arg1, [m,n] arg2) {
19     // If arguments are the same size, return # of cells, otherwise runtime error
20     return m*n;
21 }

```

## Application on Ranges

Extend gives the developer the power to easily apply operations in a functional style on ranges. For example, the following function performs cell wise addition:

```

1 foo([m,n] arg1, [m,n] arg2) {
2     [m,n] bar := #arg1 + #arg2;
3     return bar;
4 }

```

This function normalizes a column vector to have unit norm:

```

1 normalize_column_vector([m,1] arg) {
2     [m,1] squared_lengths := #arg * #arg, normalized := #arg / vector_norm;
3     vector_norm := sqrt(sum(squared_lengths));
4     return normalized;
5 }

```

## Lazy Evaluation and Circular References

All cell values and variable dimensions are evaluated lazily if and when they are needed to calculate the return expression. Using lazy evaluation ensures that the cell values are calculated in a valid topological sort order and allows for detection of circular references; internally this is accomplished by constructing a function for each formula which is called the first time the cell's value is needed, and marking the cell as "in-progress" once it starts being evaluated and as "complete" once the value has been calculated. The only guarantees the language places on the order of cell evaluation are: (1) It will be a valid topological ordering; (2) In conditional expressions and in short-circuiting operator expressions, only the relevant conditional branches will be evaluated; and (3) In an expression using the precedence operator, the preceding expression will be evaluated before the succeeding expression. A range selection consisting of multiple cells will not cause the constituent cells to be evaluated; however, selection of a single cell will cause that cell's value to be evaluated. If a program is written in such a way as to cause a circular dependency of one cell on another, and the return expression is dependent on that cell's value, a runtime error will occur. For example, in the following function:

```

1 maybeCircular(truth_value) {
2     x := x;
3     return truth_value ? x : 0;
4 }

```

A runtime error will occur if `maybeCircular(1)` is called; but if `maybeCircular(0)` is called, the function will simply return 0.

## External Libraries

Using the following library declaration:

```
1 extern "mylib.o" {
2     foo(arg1, arg2);
3     bar();
4 }
```

will make the functions `foo` (taking two arguments) and `bar` (taking zero arguments) available within Extend. In LLVM, the compiler will declare external functions `extend_foo` and `extend_bar` as functions of two and zero arguments respectively. All arguments must have the type `value_p`, and the function must have return type `value_p`, declared in the Extend standard library header file. In other words, the C file compiled to generate the library must have defined:

```
1 value_p extend_foo(value_p arg1, value_p arg2) {
2     /* function body here; */
3 }
4
5 value_p extend_bar() {
6     /* function body here; */
7 }
```

## 2.6 Introduction to Extend

Extend is a domain-specific programming language used to designate ranges of cells as reusable functions. It is a dynamically-typed, statically-scoped, declarative language that uses lazy evaluation to carry out computations. Once computed, all values are immutable. In order to offer the best performance, Extend compiles down to LLVM.

Extend's syntax is meant to provide clear punctuation and easily understandable cell range access specifications, while borrowing elements from languages with C-style syntax for ease of development. Despite these syntactic similarities, the semantics of an Extend program have more in common with a spreadsheet such as Microsoft Excel than imperative languages such as C, Java or Python.

## 2.7 Structure of an Extend Program

An Extend program consists of one or more source files. A source file can contain any number of import directives, function definitions, global variable declarations, and external library declarations, in any order.

### Import Statements

Import statements in Extend are written with `import`, followed by the name of a file in double quotes, and terminated with a semicolon. The syntax is as follows:

```
1 import "string.xtnd";
```

Extend imports act like `#include` in C, except that multiple imports of the same file are ignored. The imports are all aggregated into a single namespace.

### Function Definitions

Function definitions comprise the bulk of an Extend program. In short, a function consists of a set of variable declarations, formula assignments, and a return expression. Each variable consists of cells; the values of each cell are, if necessary, calculated according to formulas which each apply to a specified subset

of the cells. Each cell value, once calculated, is immutable. A couple examples follow for context; functions are described in detail in section 2.5.

```
1 isNumber(x) {
2     return type(x) == "Number";
3 }
4
5 sum_column([m,1] rng) {
6     /* Returns the sum of the values in the column, skipping any values that are non-
7        numeric */
8     [m,1] running_sum;
9     running_sum[0,0] = #rng;
10    running_sum[1:,0] = running_sum[[-1],] + (isNumber(#rng) ? #rng : 0);
11    return running_sum[-1];
12 }
```

## Global Variables

In essence, global variable declarations function as constants in Extend. They are written with the keyword `global`, followed by a variable declaration in the combined variable declaration and assignment format described in section 2.5. As with local variables, the cell values of a global variable, once computed, are immutable. A few examples follow:

```
1 global pi := 3.14159265359;
2 global num_points := 24;
3 global [num_points,1]
4     circle_x_vals := cos(2 * pi * row() / num_points),
5     circle_y_vals := sin(2 * pi * row() / num_points);
```

## External Library Declarations

An external library is declared with the `extern` keyword, followed by the name of an object file in double quotes, followed by a semicolon-delimited list of external function declarations enclosed by curly braces. A library declaration informs the compiler of the functions' names and signatures and instructs the compiler to link the object file when producing an executable. An external function declared as `foo` will call an appropriately written C function `extend_foo`. An example follows:

```
1 extern "mylib.o" {
2     foo(arg1, arg2);
3     bar();
4 }
```

This declaration would cause the compiler to link `mylib.o` and would make the C functions `extend_foo` and `extend_bar` available to Extend programs as `foo` and `bar` respectively. The required signature and format of the external functions is specified precisely in section 2.5.

## main function

When a compiled Extend program is executed, the `main` function is evaluated. All computations necessary to calculate the return value of the function are performed, after which the program terminates. The `main` function must be a function of a single argument, conventionally denoted `args`, which is guaranteed to be a 1-by-n range containing the command line arguments.

## Scoping and Namespace

For functions and for global variables, there is a single namespace that is shared between all files composing an Extend program, and they are visible throughout the entire program. Functions declared in external libraries share this namespace as well. For a local variable, the scope is the entire body of the function in which it is defined. Functions may declare local variables sharing a name with a global variable; inside that function, the name will refer to the local variable.

```
1 global x := "I'm a global";
2
3 foo() {
4     y := x; // Scope of x is entire function
5     x := "In here I'm a local";
6     return y; // Returns "In here I'm a local"
7 }
8
9 bar(x) {
10     return x; // Parameters mask globals; returns argument
11 }
12
13 baz() {
14     return x; // Returns "I'm a global"
15 }
```

## 2.8 Standard Library Reference

### 2.9 Example Program

```
1 import "./samples/stdlib.xtnd";
2
3 main([1,n] args) {
4     /* Get a working copy */
5     return 0;
6 }
```

## 3. Project Plan

### 3.1 Meetings

Our goals were outlined by weekly meetings. We regularly met with Jacob Graff, our advisor throughout the development of Extend. Jacob served as a sounding board whenever Extend’s fundamental design philosophy was debated, and as a guide as we determined whether we were on track. We used any leftover time on those days to set goals for the upcoming week and pair program if time permitted.

Our team also met weekly on Fridays to further discuss the progression of Extend. In the first half of the semester, the discussions were primarily philosophical, as decisions had to be made about the language grammar and behavior of certain Extend artifacts prior to development. In the second half, time was devoted to ironing out the development timeline, discussing bugs, and making compiler implementation decisions.

### 3.2 Development Workflow

### Github & Travis CI

Our development and documentation were all done entirely through version control to maximize independent productivity. New features were introduced to the master branch through pull requests, and the team used this as a platform to peer review code to maximize code quality before such features entered production.

An important aspect of development for us was continuous integration. We used Travis CI to trigger project builds on each pull request, which kept us informed regarding unexpected hiccups that sometimes arose during development. Travis CI ensured that new features were implemented with protecting the code base in mind, and provided quick visibility as to whether a new feature would break the existing build.

### 3.3 Team Member Responsibilities

Team Member	Responsibilities	GitHub Profile
Jared Samet	design philosophy, semantic transformations, code generation	<a href="#">oracleofnj</a>
Nigel Schuster	development protocol, code generation, scripting	<a href="#">Neitsch</a>
Ishaan Kolluri	initial LRM, Final Report, regression tests, stdlib functions, scripting	<a href="#">ishaankolluri</a>
Kevin Ye	initial scanner, regression tests, stdlib functions	<a href="#">kevinye1</a>

## 4. Extend's Internal Architecture

## 4.1 The Extend Compiler

The Extend compilation process consists of several source files, each of which performs a different function in the compilation pipeline.

- `scanner.mll`: OCamllex scanner - consumes tokens.
- `parser.mly`: OCamllyacc parser - represents the Extend grammar.
- `ast.ml`: Abstract Syntax Tree, created from the output of the parser and representing the structure of an Extend program.
- `transform.ml`: Performs syntactic desugaring for easier compilation.
- `semant.ml`: Analyzes the semantics of the program to ensure that the program adheres to the rules of the language.
- `codegen.ml`: The LLVM IR code generator.
- `linker.ml`: Calls intermediary compilation steps on the generated `.ll`, including external functions if needed.

### The Scanner

The function of `scanner.mll` is to parse a text stream into various tokens to be used in an Extend program. Only the tokens that are valid in Extend are to be given to the parser; all others will return a syntax error marked by the line and character number.

### The Parser and Abstract Syntax Tree

The parser converts the tokens read by the scanner into a syntax tree deemed acceptable grammar within the Extend Language. This is converted into an Abstract Syntax Tree, which has nodes that can be consumed by the back end of the Extend compiler.

### The Transformer

The transformer expands compact statements in the Extend syntax tree into statements with equivalent functionality, but reduced breadth. This step is done to preserve the convenience for the user, but revert the code later into a form that is easier for the compiler to chew on.

### The Semantic Analyzer

The semantic analyzer ensures that Extend functions, variables, expressions, and more are being used properly at compile time, and throws flavorful exceptions to the user so that they may better understand why their program was illegal.

### The Code Generator

Provided that the program was deemed legal by `transform.ml`, the code generator will take the program definition in the abstract syntax tree and generate the appropriate LLVM IR to turn it into a functional program. Instructions to allocate memory, interact with external functions, and platform optimization can be found here.

## The Linker

If successful LLVM IR is generated, the linker will adopt the role of building an executable object from the .ll file. This includes compiling it to an object file and linking the runtime environment along with other imported libraries.

## 5. Testing

Due to Extend being a large undertaking, we took steps to ensure that all features were working as the design of the language intended.

This was done through implementing test cases that isolated specific aspects of the Extend language to ensure that each feature worked correctly. For basic components, we wrote a plethora of tests to illustrate functionality. For undertakings that required more debate on the design of the language, other tests were created and modified throughout development.

### 5.1 Feature Integration & Testing

Development of new features naturally means that they must be deemed legal by the scanner, parser, semantic analyzer, and code generator. As we developed new features, the process was roughly as follows:

1. Write a simple test that illustrated the feature to test.
2. Write the expected output of the aforementioned test to a text file.
3. Confirm that the scanner consumes the tokens related to the feature.
4. Confirm that the parser grammar has been adjusted to accomodate the new feature.
5. Confirm that the semantic analyzer and transformer can properly identify and check the new feature code.
6. Confirm that code generation generates the appropriate LLVM IR for the new features - such as allocating memory, building calls, and more.
7. Ensure that the test written can write its output to `stdout`, to be compared with expected output.
8. Compile and test the code to ensure that the code has worked to the team's expectations.

Earlier in the development process, we tested the front end of our compiler by JSON-ifying the abstract syntax tree, printing it, and examinining it. As we settled into full-fledged development, we would test with a full-feature regression test suite. Later in the semester, JSON-ifying still proved to be useful, as it gave us the option to print debug statements if needed.

### 5.2 Regression Test Suite

Extend's test suite is executable through the `testscript.sh` script at the top level of the project. There are over 100 integration test files for various features of the Extend language, and a corresponding file with their expected output to `stdout`. This is to ensure that the successful implementation of one feature does not impact that of others.

Regression tests were placed in the `testcases/inputs_regression` directory. Tests that did not pass at the time were placed in the `testcases/inputs` directory. The test script compiles and executes each test, and compares it with the corresponding expected output file, living in the `testcases/expected` directory. Whenever a test passed in `inputs`, it was automatically moved over to `inputs_regression`.

**Note:** We have added a full test listing at the end of this document. Please refer to the chapter titled "Test Listing" for more detail.

## Integration with Travis CI

The aforementioned test suite is run by Travis CI in the event that the Extend compiler is successfully built; otherwise, the build will fail and exit. In our development workflow, checking the logs during build failures sometimes revealed that tests in the regression test suite did not succeed as expected. This integration kept the far-reaching effects of newly introduced features entirely transparent throughout the process.

Using Travis CI allowed us to maintain the working ability of our compiler, as it ensured that every new feature pushed to the master branch would still result in a successful build. This proved to be invaluable when testing the compiler at a macro-level, or providing Jacob, our TA, with up-to-date demonstrations.

42 | | |
43 | | |      Merge pull request #74 from ExtendLang/fix-tc
44 | | |
```

```

45 | | | Fixed ternary testcase
46 | | |
47 | * | commit d9abfc09658cf505f5f9b9239953cb7b1347bef7
48 | | \ Merge: 324779a 23328f1
49 | | / Author: Nigel Schuster <Neitsch@users.noreply.github.com>
50 | / | Date: Tue Dec 13 15:38:38 2016 -0500
51 | | |
52 | | | Merge branch 'master' into fix-tc
53 | | |
54 | * | commit 324779a30d19b74050584d4ef2bd536d3f1b4943
55 | | | Author: Nigel Schuster <nigel.schusters@googlemail.com>
56 | | | Date: Tue Dec 13 15:32:26 2016 -0500
57 | | |
58 | | | Corrected expected value
59 | | |
60 | * | commit fafe2e602f3a091d77ddbb90887680bcefc9bd95
61 | | | Author: Nigel Schuster <nigel.schusters@googlemail.com>
62 | | | Date: Tue Dec 13 15:29:00 2016 -0500
63 | | |
64 | | | Fixed string tc
65 | | |
66 | * | commit 022f05c5b303b6c567d38393517803276c90b157
67 | | | Author: Nigel Schuster <nigel.schusters@googlemail.com>
68 | | | Date: Tue Dec 13 15:23:59 2016 -0500
69 | | |
70 | | | Fixed testcase
71 | | |
72 | | * commit f8c9b435857d699209cfe033171f124ce78e3dae
73 | | | Author: oracleofnj <jared.samet@aya.yale.edu>
74 | | | Date: Tue Dec 13 16:13:09 2016 -0500
75 | | |
76 | | | Make TypeOf work
77 | | |
78 | | * commit bfe1c07e3b3ec6d5237043eb50ce73f2fac80fb9
79 | | | Merge: 50ed49c 23328f1
80 | | | Author: oracleofnj <jared.samet@aya.yale.edu>
81 | / | Date: Tue Dec 13 15:39:45 2016 -0500
82 | | |
83 | | | Merge branch 'master' into unop-unary-minus
84 | | |
85 | * | commit 23328f10c3bf28e27a7e6a081fa91eea27611b5b
86 | \ \ Merge: 6ad8512 b12fe37
87 | | | Author: Nigel Schuster <Neitsch@users.noreply.github.com>
88 | | | Date: Tue Dec 13 15:37:18 2016 -0500
89 | | |
90 | | | Merge pull request #73 from ExtendLang/and-or-xor
91 | | |
92 | | | And or xor
93 | | |
94 | * | commit b12fe378c00d0782b36cc270a1388b2bb9094a52
95 | | | Author: Nigel Schuster <nigel.schusters@googlemail.com>
96 | | | Date: Tue Dec 13 15:18:57 2016 -0500
97 | | |
98 | | | Implemented and, or and xor
99 | | |
100 | * | commit 90cbaa089e26f712bdb0321c66604d5ab83d4a75

```

```

1909 | | | | Date:   Mon Nov 28 23:05:28 2016 -0500
1910 | | | |
1911 | | | |     Merge pull request #9 from ExtendLang/func-calls
1912 | | | |
1913 | | | |     Function calls work now
1914 | | | |
1915 | | | * commit 7a2af4937e6abf0621cfabad4ee463dfa7b64e20
1916 | | | | Author: Nigel Schuster <nigel.schusters@googlemail.com>
1917 | | | | Date:   Mon Nov 28 20:33:53 2016 -0500
1918 | | | |
1919 | | | |     Removed another ocaml 4.3 dep
1920 | | | |
1921 | | | * commit 468e79f88bcecd2d60c822799c353bc00ee11099
1922 | | | | Author: Nigel Schuster <nigel.schusters@googlemail.com>
1923 | | | | Date:   Mon Nov 28 19:50:53 2016 -0500
1924 | | | |
1925 | | | |     Added ocaml 4.3 as dep for travis (hopefully this works)
1926 | | | |
1927 | | | * commit a40876103c19a444466a07019854cf508ccfe276
1928 | | | | Author: Nigel Schuster <nigel.schusters@googlemail.com>
1929 | | | | Date:   Mon Nov 28 19:35:49 2016 -0500
1930 | | | |
1931 | | | |     Fixed String.equal
1932 | | | |
1933 | | | * commit 90c3cafldc0ebf18d2e8709df39be6333266bc56
1934 | | | | Author: Nigel Schuster <nigel.schusters@googlemail.com>
1935 | | | | Date:   Sun Nov 27 22:52:14 2016 -0500
1936 | | | |
1937 | | | |     Fixed interpreter for now

```

```

1938 | |
1939 | * commit a18da787c64c95ed8cc31f8f188bb1ef9507453b
1940 | | Author: Nigel Schuster <nigel.schusters@googlemail.com>
1941 | | Date: Sun Nov 27 22:42:27 2016 -0500
1942 | |
1943 | | Added accidentally created file
1944 | |
1945 | * commit 5647312ef3939b7417783c3ff7620a90d3b002fe
1946 | | Author: Nigel Schuster <nigel.schusters@googlemail.com>
1947 | | Date: Sun Nov 27 22:41:22 2016 -0500
1948 | |
1949 | | Made extern function calls work
1950 | |
1951 | * commit 872aa8c4c287ddb35dd5d529df2122e1b38a0fb9
1952 | | Merge: 26ef1cc 877336f
1953 | | Author: Nigel Schuster <nigel.schusters@googlemail.com>
1954 | | Date: Sun Nov 27 13:52:44 2016 -0500
1955 | |
1956 | | Merge branch 'func-calls' of https://github.com/ExtendLang/Extend into func-
calls
1957 | | |
1958 | | * commit 877336f09f10848092540a3349b1a42c9a6ebd9
1959 | | | Merge: 374273f 5b3edb0
1960 | | | Author: Nigel Schuster <Neitsch@users.noreply.github.com>
1961 | | | Date: Sun Nov 27 12:15:11 2016 -0500
1962 | | |
1963 | | | Merge branch 'master' into func-calls
1964 | | |
1965 | * | | commit 5b3edb0d0b6e8764cadd9290eab3c9dad7fb782d
1966 | | | Merge: 442ae91 952aab8
1967 | | | Author: Nigel Schuster <Neitsch@users.noreply.github.com>
1968 | | | Date: Sun Nov 27 12:14:43 2016 -0500
1969 | | |
1970 | | | Merge pull request #8 from ExtendLang/stdlib-template
1971 | | |
1972 | | | Stdlib template
1973 | | |
1974 | | * | commit 26ef1cc506931d6771cf950fdae016f9f3874bbe
1975 | | | Author: Nigel Schuster <nigel.schusters@googlemail.com>
1976 | | | Date: Sun Nov 27 13:51:06 2016 -0500
1977 | | |
1978 | | | Merging list of functions
1979 | | |
1980 | | * commit 374273f2ceb3b69ee489c39c0f3767ab4748f246
1981 | | | Author: Nigel Schuster <nigel.schusters@googlemail.com>
1982 | | | Date: Sun Nov 27 12:13:52 2016 -0500
1983 | | |
1984 | | | Function calls work now
1985 | | |
1986 | * commit 952aab83190eb5b8e3be609fe44fa0fc0cbe8f2b
1987 | | Merge: ac6268f 554fbb2
1988 | | Author: Nigel Schuster <nigel.schusters@googlemail.com>
1989 | | Date: Sun Nov 27 09:54:12 2016 -0500
1990 | | |
1991 | | | Merge extern
1992 | | |

```

```

1993 | | * commit 554fbb28bf7e995117790bd17770af810b1caa37
1994 | | | Author: oracleofnj <jared.samet@aya.yale.edu>
1995 | | | Date:   Wed Nov 23 22:28:29 2016 -0500
1996 | | |
1997 | | |     Better error message for WrongNumberArgs
1998 | | |
1999 | | * commit f09e40e405befe48f3b2310c6f4a0aec48dbcf7
2000 | | | Author: oracleofnj <jared.samet@aya.yale.edu>
2001 | | | Date:   Wed Nov 23 12:47:39 2016 -0500
2002 | | |
2003 | | |     Make sequence work
2004 | | |
2005 | | * commit 053980bc62d59316a73fe42efaf1706d8f8d813c
2006 | | | Author: oracleofnj <jared.samet@aya.yale.edu>
2007 | | | Date:   Tue Nov 22 16:02:27 2016 -0500
2008 | | |
2009 | | |     Actually commit all the extern stuff
2010 | | |
2011 | | * commit ac6268fd89de976aa5d355e09215f5bab22d128f
2012 | | | Author: Nigel Schuster <nigel.schusters@googlemail.com>
2013 | | | Date:   Sat Nov 26 23:06:00 2016 -0500
2014 | | |
2015 | | |     Boxing ints, added unop sizeof, actually returning subrange not dummy object
2016 | | |
2017 | | * commit ca07be3d9e79a9398b1da5fbc30a22976fbe2246
2018 | | | Author: Nigel Schuster <nigel.schusters@googlemail.com>
2019 | | | Date:   Sat Nov 26 21:27:19 2016 -0500
2020 | | |
2021 | | |     Unboxing hello world to and from subrange
2022 | | |
2023 | | * commit aef6c1964b6e8ca2b0d05d3a5e1efb8a5b0f8159
2024 | | | Author: Nigel Schuster <nigel.schusters@googlemail.com>
2025 | | | Date:   Sat Nov 26 16:55:48 2016 -0500
2026 | | |
2027 | | |     Made Hello World somewhat workable
2028 | | |
2029 | | * commit cfb637efdc1747331c83e6ccfe9f417fb8fc3c1d
2030 | | | Author: Nigel Schuster <nigel.schusters@googlemail.com>
2031 | | | Date:   Fri Nov 25 18:27:37 2016 -0500
2032 | | |
2033 | | |     Fixed faulty setup on call
2034 | | |
2035 | | * commit ebf926a2c3cd85309b6dfac4febc166d381c8ca2
2036 | | | Author: Nigel Schuster <nigel.schusters@googlemail.com>
2037 | | | Date:   Fri Nov 25 17:48:57 2016 -0500
2038 | | |
2039 | | |     Added template in C
2040 | | |
2041 | | * commit 0e0fa23bclb0fb0bc039fa0d1cbcb5f617f0cc9c
2042 | | / Author: Nigel Schuster <nigel.schusters@googlemail.com>
2043 | | | Date:   Tue Nov 22 14:36:54 2016 -0500
2044 | | |
2045 | | |     Added extern in Ast
2046 | | |
2047 | | * commit aac63be5941852ff37036e5a69d1347ba7744a82
2048 | | | Author: oracleofnj <jared.samet@aya.yale.edu>

```

```

2049 | | Date:   Mon Nov 21 23:52:25 2016 -0500
2050 | |
2051 | |     Better duplicate definition checking
2052 | |
2053 | | * commit 08e2d073c08f1b2067f9e8a130595114815091ae
2054 | | Author: oracleofnj <jared.samet@aya.yale.edu>
2055 | | Date:   Mon Nov 21 23:29:28 2016 -0500
2056 | |
2057 | |     Check assertions before evaluating fn return expression
2058 | |
2059 | | * commit 69fa332091dfb61848a9c7b47092c31244e74153
2060 | | Author: oracleofnj <jared.samet@aya.yale.edu>
2061 | | Date:   Mon Nov 21 18:01:23 2016 -0500
2062 | |
2063 | |     Add size assertions
2064 | |
2065 | | * commit 22541c427b7883b6fc89841b077ec8c1c9d41c80
2066 | | Author: oracleofnj <jared.samet@aya.yale.edu>
2067 | | Date:   Mon Nov 21 12:48:34 2016 -0500
2068 | |
2069 | |     Fix bug in Call()
2070 | |
2071 | | * commit 9ald24bb89721d76c3987f50d3095b16c182f38e
2072 | | Author: oracleofnj <jared.samet@aya.yale.edu>
2073 | | Date:   Mon Nov 21 12:39:41 2016 -0500
2074 | |
2075 | |     Working on crazy bug
2076 | |
2077 | | * commit a485ceef7e987cdef7cd4321d01849bc73342e78
2078 | | Author: oracleofnj <jared.samet@aya.yale.edu>
2079 | | Date:   Sun Nov 20 22:13:46 2016 -0500
2080 | |
2081 | |     Add test case for foo([m, n] arg)
2082 | |
2083 | | * commit 10afe9a2fdb645fbb146c724d6281d34d4ba3f8a
2084 | | Author: oracleofnj <jared.samet@aya.yale.edu>
2085 | | Date:   Sun Nov 20 22:07:17 2016 -0500
2086 | |
2087 | |     Expand function signature
2088 | |
2089 | | * commit 325e9ba5b275d2d312953e02eb1abca561a31a74
2090 | | Author: oracleofnj <jared.samet@aya.yale.edu>
2091 | | Date:   Sun Nov 20 18:53:52 2016 -0500
2092 | |
2093 | |     Well, this is awkward
2094 | |
2095 | | * commit 0a76dc987d319e86ab1e342c5d96bbc624c4bbdb
2096 | | Author: oracleofnj <jared.samet@aya.yale.edu>
2097 | | Date:   Sun Nov 20 18:41:12 2016 -0500
2098 | |
2099 | |     Add check of return value
2100 | |
2101 | | * commit 488e34ea0aeebc91443a355a94e9586351d57049
2102 | | Author: oracleofnj <jared.samet@aya.yale.edu>
2103 | | Date:   Sun Nov 20 18:31:39 2016 -0500
2104 | |

```

```

2105 | |      Add sample #1
2106 | |
2107 | * commit 93eebc5c3442929d4d2f2a1f99c199538009d707
2108 | | Author: oracleofnj <jared.samet@aya.yale.edu>
2109 | | Date:   Sun Nov 20 18:27:23 2016 -0500
2110 | |
2111 | |      Add semantic checking to make sure functions and variables on RHS exist
2112 | |
2113 | * commit 881f164a15251a781692045ce602dc5153adbbb7
2114 | / Author: oracleofnj <jared.samet@aya.yale.edu>
2115 | | Date:   Sun Nov 20 17:22:40 2016 -0500
2116 | |
2117 | |      Check RHS slice to ensure end > start, otherwise evaluate to empty
2118 | |
2119 | * commit 442ae9121c99adeb30215e524022e1dd046e0e66
2120 | \ Merge: 367bc2b f7f701d
2121 | | Author: Nigel Schuster <Neitsch@users.noreply.github.com>
2122 | | Date:   Sun Nov 20 11:42:54 2016 -0500
2123 | |
2124 | |      Merge pull request #73 from Neitsch/interpreter-global
2125 | |
2126 | |      Added use of global variables to interpreter
2127 | |
2128 | * commit f7f701d56f6e553742adcf396bffd7d0d2021cd2
2129 | / Author: Nigel Schuster <nigel.schusters@googlemail.com>
2130 | | Date:   Sun Nov 20 11:30:06 2016 -0500
2131 | |
2132 | |      Added use of global variables to interpreter, fixed specs for logical or and
2133 | |      and testcases with empty
2134 | * commit 367bc2b3b07ed593eba6475aa42d3d66bada93c9
2135 | \ Merge: e956238 bdca834
2136 | | Author: Nigel Schuster <Neitsch@users.noreply.github.com>
2137 | | Date:   Sun Nov 20 00:33:17 2016 -0500
2138 | |
2139 | |      Merge pull request #72 from Neitsch/codegen-part-app-fix
2140 | |
2141 | |      Fixed partial function application warning
2142 | |
2143 | * commit bdca8349c823e69a9065ca2f7efd24d8ba3d3482
2144 | | \ Merge: 9b742d1 e956238
2145 | | / Author: Nigel Schuster <Neitsch@users.noreply.github.com>
2146 | | / Date:   Sun Nov 20 00:31:04 2016 -0500
2147 | |
2148 | |      Merge branch 'master' into codegen-part-app-fix
2149 | |
2150 | * commit e956238e31b3811552c0c4fblab6ea10f00107e1
2151 | \ \ Merge: f87cb94 32f2989
2152 | | | Author: Nigel Schuster <Neitsch@users.noreply.github.com>
2153 | | | Date:   Sun Nov 20 00:28:49 2016 -0500
2154 | | |
2155 | | |      Merge pull request #71 from Neitsch/tc-fixes
2156 | | |
2157 | | |      Tc fixes
2158 | | |
2159 | * commit 32f2989ad2a169fe36509509b8bf8aeb61e7d8f4

2855 | |
2856 | | Merge pull request #42 from Neitsch/llvm-gen
2857 | |
2858 | | Lllvm gen
2859 | |
2860 | * commit 25b23cd3df1e93a00a330b2e02166d41e4dfea
2861 | | Author: Nigel Schuster <nigel.schusters@googlemail.com>
2862 | | Date: Tue Nov 15 17:23:54 2016 -0500
2863 | |
2864 | | Fixed column retrieval for 1x1
2865 | |
2866 | * commit 3f022031254b6da7a3278153288a09d052d16fa2
2867 | | Author: Nigel Schuster <nigel.schusters@googlemail.com>
2868 | | Date: Tue Nov 15 17:17:02 2016 -0500
2869 | |
2870 | | Fixed tests
2871 | |
2872 | * commit 26b8fcf1a26394ee6c82f447330ef2510aa32dc8
2873 | \ Merge: e347a87 aed28b3
2874 | | Author: Nigel Schuster <nigel.schusters@googlemail.com>
2875 | | Date: Tue Nov 15 17:15:08 2016 -0500
2876 | | |
2877 | | | Merge
2878 | | |
2879 | | * commit aed28b3e2ad836558e1ecdb4afb276f5bd022114
2880 | | | Author: oracleofnj <jared.samet@aya.yale.edu>
2881 | | | Date: Tue Nov 15 17:08:07 2016 -0500
2882 | | |
2883 | | | Add is_subrange_1x1
2884 | | |

```

```

2885 | | *   commit cf5cbf0613395995f0ee23f19ab4a1a879364385
2886 | | | \ Merge: c71d469 4b34abd
2887 | | | | Author: oracleofnj <jared.samet@aya.yale.edu>
2888 | | | | Date:   Tue Nov 15 14:51:40 2016 -0500
2889 | | | |
2890 | | | |     Merge branch 'llvm-gen' of https://github.com/Neitsch/plt into llvm-gen
2891 | | | |
2892 | | | *   commit 4b34abd125b1651df31211d8779b7c549d515ae7
2893 | | | | \ Merge: a80a6d0 8ad5a19
2894 | | | | / Author: Nigel Schuster <Neitsch@users.noreply.github.com>
2895 | / | | | Date:   Tue Nov 15 14:41:37 2016 -0500
2896 | | | |
2897 | | | |     Merge branch 'master' into llvm-gen
2898 | | | |
2899 * | | |   commit 8ad5a19ed1d3e25da7ee9995fa1079fab3d08cb5
2900 | \ \ \ \ Merge: d6daff3 3f0362a
2901 | | | | | Author: Jared Samet <jared.samet@aya.yale.edu>
2902 | | | | | Date:   Tue Nov 15 14:33:40 2016 -0500
2903 | | | | |
2904 | | | | |     Merge pull request #40 from Neitsch/interpreter
2905 | | | | |
2906 | | | | |     Interpreter
2907 | | | | |
2908 | * | | |   commit 3f0362aff5a44f3c39f0d991c5cc11b85dc7c47e
2909 | | \ \ \ \ Merge: d5f4024 d6daff3
2910 | | / / / / Author: Jared Samet <jared.samet@aya.yale.edu>
2911 | / | | | | Date:   Tue Nov 15 14:28:44 2016 -0500
2912 | | | | |
2913 | | | | |     Merge branch 'master' into interpreter
2914 | | | | |
2915 * | | | |   commit d6daff3a9c877c8277f1bd86f080f0defa597ead
2916 | \ \ \ \ \ Merge: 443a818 6afe599
2917 | | | | | | Author: Jared Samet <jared.samet@aya.yale.edu>
2918 | | | | | | Date:   Sun Nov 13 20:26:14 2016 -0500
2919 | | | | | |
2920 | | | | | |     Merge pull request #41 from Neitsch/LRM_String_Update
2921 | | | | | |
2922 | | | | | |     Added changes relating to strings.
2923 | | | | | |
2924 | * | | | |   commit 6afe5996ee757b714490685718f04027e04532ab
2925 | | | | | | Author: Ishaan Kolluri <ishaankolluri@gmail.com>
2926 | | | | | | Date:   Sun Nov 13 18:44:58 2016 -0500
2927 | | | | | |
2928 | | | | | |     Added changes relating to strings.
2929 | | | | | |
2930 | | | | * |   commit c71d469cf691b624960ee4657697d623f0055f55
2931 | | | | | / Author: oracleofnj <jared.samet@aya.yale.edu>
2932 | | | | | Date:   Tue Nov 15 14:51:19 2016 -0500
2933 | | | | |
2934 | | | | |     Replace String.equal with =
2935 | | | | |
2936 | | | | *   commit a80a6d0053c71eb473fbbe5b3cdcaca004be4b48
2937 | | | | | Author: oracleofnj <jared.samet@aya.yale.edu>
2938 | | | | | Date:   Tue Nov 15 14:41:07 2016 -0500
2939 | | | | |
2940 | | | | |     Add compile option to main

```

```

2941 | | | | |
2942 | | | * | commit e347a876c8713deff609324bae48d55ba8a69f04
2943 | | | | / Author: Nigel Schuster <nigel.schusters@googlemail.com>
2944 | | | | Date: Tue Nov 15 17:12:26 2016 -0500
2945 | | | |
2946 | | | | Using more generic flag for values
2947 | | | |
2948 | | | * | commit c0c95a24323efbbe0abab2632671275c6ba0854a
2949 | | | | \ Merge: aa61ac9 d5f4024
2950 | | | | / Author: Nigel Schuster <nigel.schusters@googlemail.com>
2951 | | | | / Date: Tue Nov 15 14:16:13 2016 -0500
2952 | | | |
2953 | | | | Merge
2954 | | | |
2955 | | * | commit d5f4024aab33d3307ddea75005f9885dc03395dc
2956 | | | | Author: Nigel Schuster <nigel.schusters@googlemail.com>
2957 | | | | Date: Tue Nov 15 13:44:44 2016 -0500
2958 | | | |
2959 | | | | Moved failing TCs
2960 | | | |
2961 | | * | commit 42fd9ef88b59f80351a1170a3c5fc3d393ad55b6
2962 | | | | Author: oracleofnj <jared.samet@aya.yale.edu>
2963 | | | | Date: Tue Nov 15 12:21:57 2016 -0500
2964 | | | |
2965 | | | | Fix bug in import
2966 | | | |
2967 | | * | commit 9c567c954d5e4f576f1ffaec3c5f152e86761c65
2968 | | | | Author: Nigel Schuster <nigel.schusters@googlemail.com>
2969 | | | | Date: Tue Nov 15 11:11:30 2016 -0500
2970 | | | |
2971 | | | | Working on imports, fixed most testcases
2972 | | | |
2973 | | * | commit cf1ebf94b4dfacc0163e479d2ed6979146b47e2e
2974 | | | | Author: oracleofnj <jared.samet@aya.yale.edu>
2975 | | | | Date: Sun Nov 13 23:09:30 2016 -0500
2976 | | | |
2977 | | | | Rewrite main to take options; fix bug where import didn't know about first
      | | | | filename
2978 | | | |
2979 | | * | commit 0a5d484dba0b5e288e3b2bad4d6a4c044e1f8da9
2980 | | | | Author: oracleofnj <jared.samet@aya.yale.edu>
2981 | | | | Date: Sun Nov 13 18:45:29 2016 -0500
2982 | | | |
2983 | | | | Revert "Generating function header"
2984 | | | |
2985 | | | | This reverts commit f83a0bcc6ca8d58d79bdfb4b49471c6031e8d201.
2986 | | | |
2987 | | * | commit 137d7e2b95b7340894b1d826dc38ef91a958e731
2988 | | | \ \ Merge: 118bfc5 bf1d8bb
2989 | | | | / Author: oracleofnj <jared.samet@aya.yale.edu>
2990 | | | | / Date: Sun Nov 13 18:39:33 2016 -0500
2991 | | | |
2992 | | | | Merge branch 'interpreter' of https://github.com/Neitsch/plt into
      | | | | interpreter
2993 | | | |
2994 | | * | commit 118bfc54ba67ecba87442b26112557c59868220e

```

```

2995 | | | | Author: oracleofnj <jared.samet@aya.yale.edu>
2996 | | | | Date: Sun Nov 13 18:38:34 2016 -0500
2997 | | | |
2998 | | | | Allow single slice on RHS; make hashtag work
2999 | | | |
3000 | | * | | commit 3addcc8b8c5029a7635a4b7edb5d718917618304
3001 | | | | Author: oracleofnj <jared.samet@aya.yale.edu>
3002 | | | | Date: Sun Nov 13 14:38:11 2016 -0500
3003 | | | |
3004 | | | | Make size(expr) an operator instead of built-in function
3005 | | | |
3006 | | * | | commit 9a74e14abc798cab3268420451b7b9f3a9a2b7aa
3007 | | | | Author: oracleofnj <jared.samet@aya.yale.edu>
3008 | | | | Date: Sun Nov 13 14:22:44 2016 -0500
3009 | | | |
3010 | | | | Changing size() to be an operator
3011 | | | |
3012 | | | | * commit aa61ac98d42571ab91a54ff06cb80be3deaa76b7
3013 | | | | Author: Nigel Schuster <nigel.schusters@googlemail.com>
3014 | | | | Date: Tue Nov 15 09:31:42 2016 -0500
3015 | | | |
3016 | | | | Allocating scope object
3017 | | | |
3018 | | | | * commit 574953833ac17b8d9c86faa967568ee8a27c7c22
3019 | | | | Author: Nigel Schuster <nigel.schusters@googlemail.com>
3020 | | | | Date: Sun Nov 13 21:59:28 2016 -0500
3021 | | | |
3022 | | | | Added main function
3023 | | | |
3024 | | | | * commit e376270c9b5af196cac37f5cd2f64071b9768ace
3025 | | | | Author: Nigel Schuster <nigel.schusters@googlemail.com>
3026 | | | | Date: Sun Nov 13 17:55:41 2016 -0500
3027 | | | |
3028 | | | | Added type arguments for functions
3029 | | | |
3030 | | | | * commit 5cfb5199f5effd2ce86663bfce7ba388a169bb6f
3031 | | | | / Author: Nigel Schuster <nigel.schusters@googlemail.com>
3032 | | | | Date: Sun Nov 13 17:26:23 2016 -0500
3033 | | | |
3034 | | | | Set more types up
3035 | | | |
3036 | | | | * commit bf1d8bb2b3965e4aeab26a1f4d1c91569c2eb6f2
3037 | | | | \ Merge: f83a0bc d6d2eaa
3038 | | | | / Author: Nigel Schuster <nigel.schusters@googlemail.com>
3039 | | | | Date: Sun Nov 13 15:30:35 2016 -0500
3040 | | | |
3041 | | | | Merge branch 'interpreter' of https://github.com/Neitsch/plt into
3042 | | | | interpreter
3043 | | * | | commit d6d2eaa5440fbb39958b104a520197857514ea06
3044 | | | | Author: oracleofnj <jared.samet@aya.yale.edu>
3045 | | | | Date: Sun Nov 13 00:08:41 2016 -0500
3046 | | | |
3047 | | | | Add closure to interpreter_variable
3048 | | | |
3049 | | * | | commit 64fba825d3c3d6eb216bfa6228cab91c8985d048

```

```

3050 | | | Author: oracleofnj <jared.samet@aya.yale.edu>
3051 | | | Date: Sat Nov 12 22:38:39 2016 -0500
3052 | | |
3053 | | | Added bsearch to show logic bug
3054 | | |
3055 | | * | commit 66ffdb1cdd48dfdb93653a30e07ea47573fbb42c
3056 | | | Author: oracleofnj <jared.samet@aya.yale.edu>
3057 | | | Date: Sat Nov 12 19:21:07 2016 -0500
3058 | | |
3059 | | | Add alpha version of function calls
3060 | | |
3061 | | * | commit 376b29aelf4b72fedb438e13b5fd1b3373c827bb
3062 | | | Author: oracleofnj <jared.samet@aya.yale.edu>
3063 | | | Date: Sat Nov 12 17:17:23 2016 -0500
3064 | | |
3065 | | | Add string as value type
3066 | | |
3067 | | * | commit 08c61ee7724a15c9f95f1afbaabfe69aff63c2a4
3068 | | | Author: oracleofnj <jared.samet@aya.yale.edu>
3069 | | | Date: Sat Nov 12 17:14:47 2016 -0500
3070 | | |
3071 | | | Clean up discrepancies
3072 | | |
3073 | | | * commit f83a0bcc6ca8d58d79bdfb4b49471c6031e8d201
3074 | | | / Author: Nigel Schuster <nigel.schusters@googlemail.com>
3075 | | | Date: Sun Nov 13 15:30:28 2016 -0500
3076 | | |
3077 | | | Generating function header
3078 | | |
3079 | | * | commit a18d5fc571d7ad30c4720b2a2ab5a58865726120
3080 | | | Author: oracleofnj <jared.samet@aya.yale.edu>
3081 | | | Date: Tue Nov 8 11:38:22 2016 -0500
3082 | | |
3083 | | | Fix bug with x[-1]
3084 | | |
3085 | | * | commit 962f81284eea2537d5b92451fb5494e52c1600a1
3086 | | | Author: oracleofnj <jared.samet@aya.yale.edu>
3087 | | | Date: Mon Nov 7 23:27:08 2016 -0500
3088 | | |
3089 | | | Refactor scope for interpreter; resolve variables on demand; make selections
    | | | work properly
3090 | | |
3091 | | * | commit 47bbef19ea8c13e555d5751a1ae4f369b8d0007d
3092 | | | Author: oracleofnj <jared.samet@aya.yale.edu>
3093 | | | Date: Sun Nov 6 22:05:55 2016 -0500
3094 | | |
3095 | | | Minor adjustments to interpreter to work with mapped AST
3096 | | |
3097 | | * | commit fddc6bc63b746a5aa19fb96fc1100a9da62ef94f
3098 | | | Author: oracleofnj <jared.samet@aya.yale.edu>
3099 | | | Date: Sun Nov 6 18:32:17 2016 -0500
3100 | | |
3101 | | | Eliminate extraneous nulls in JSON
3102 | | |
3103 | | * | commit ffddb17fb3d6995f44b24199a1fa6a45289ec8a3
3104 | | | Author: oracleofnj <jared.samet@aya.yale.edu>

```

```

3105 | | | Date:    Sun Nov 6 18:15:40 2016 -0500
3106 | | |
3107 | | |     Turn statement and function lists into StringMaps
3108 | | |
3109 | | |     * Lists of statements are organized into StringMaps, mapping
3110 | | |     * variable names to (dimensions, [formula assignments])
3111 | | |     * Each dimension is either an integer or an ID (no "Some")
3112 | | |     * For each formula assignment, row_start, row_end, col_start, col_end
3113 | | |     * are now either integers or IDs
3114 | | |     *
3115 | | |     * Lists of functions are organized into StringMaps, mapping function
3116 | | |     * names to (parameters, StringMap{variable name: def}, return val)
3117 | | |     *
3118 | | |     * Throws an exception if duplicate variable definitions or function
3119 | | |     * definitions are encountered
3120 | | |     *
3121 | | |     * Throws an exception if an assignment to an unknown variable
3122 | | |     * is encountered
3123 | | |
3124 | | | * commit 6810003e25ead7a1cb013849cb94600ab501dae8
3125 | | | Author: oracleofnj <jared.samet@aya.yale.edu>
3126 | | | Date:    Sat Nov 5 19:47:57 2016 -0400
3127 | | |
3128 | | |     Fix pattern matching warning
3129 | | |
3130 | | | * commit 7107a46504b717448dcd1f51a969fe5d0fc289e8
3131 | | | Author: oracleofnj <jared.samet@aya.yale.edu>
3132 | | | Date:    Sat Nov 5 18:01:34 2016 -0400
3133 | | |
3134 | | |     Add function to check range literals for legality at parse time
3135 | | |
3136 | | | * commit 80b13d19d1c44db5109f6bcaf2a484175a0340a6
3137 | | | Author: oracleofnj <jared.samet@aya.yale.edu>
3138 | | | Date:    Sat Nov 5 15:13:10 2016 -0400
3139 | | |
3140 | | |     Handle selections better
3141 | | |
3142 | | | * commit 6cbb009ff6e6d1cee972a5cf79520797c685a52f
3143 | | | Author: oracleofnj <jared.samet@aya.yale.edu>
3144 | | | Date:    Fri Nov 4 15:48:58 2016 -0400
3145 | | |
3146 | | |     Count to 1,000,000 using tail-recursive versions of List.map and cartesian
3147 | | |     product
3148 | | | * commit 9b2252d163cb36dee96cc654b3b33a2adb96825e
3149 | | | Author: oracleofnj <jared.samet@aya.yale.edu>
3150 | | | Date:    Fri Nov 4 15:25:13 2016 -0400
3151 | | |
3152 | | |     Show enter and exit
3153 | | |
3154 | | | * commit 3585e432acf0c6aef34585cad6ef491f1e0aalcd
3155 | | | Author: oracleofnj <jared.samet@aya.yale.edu>
3156 | | | Date:    Fri Nov 4 02:21:38 2016 -0400
3157 | | |
3158 | | |     See how high it can count recursively
3159 | | |

```

```

3160 | | * commit 38cf541bfd31e7fe9458c287c39c639ddda2792f
3161 | | | Author: oracleofnj <jared.samet@aya.yale.edu>
3162 | | | Date:   Fri Nov 4 02:15:50 2016 -0400
3163 | | |
3164 | | |     Get the easy parts of the interpreter working
3165 | | |
3166 | | * commit 5d81d6ebc492cd13db7ea52a35f104512a5873c9
3167 | | | Author: oracleofnj <jared.samet@aya.yale.edu>
3168 | | | Date:   Thu Nov 3 17:17:51 2016 -0400
3169 | | |
3170 | | |     Start working on interpreter
3171 | | |
3172 | | * commit 0078cee2ecbb431212849db233909580a2bb8c41
3173 | | | Author: oracleofnj <jared.samet@aya.yale.edu>
3174 | | | Date:   Tue Nov 1 23:40:57 2016 -0400
3175 | | |
3176 | | |     Got a non-tail-recursive version of topological sort working
3177 | | |
3178 | | * commit 85df17519a57bf08f21d20c97c7c768e294673ac
3179 | | | Author: oracleofnj <jared.samet@aya.yale.edu>

3507 | | Date:   Mon Oct 24 23:14:30 2016 -0400
3508 | |
3509 | |     Fix file inclusion and rebuild PDF
3510 | |
3511 | * commit b24edd3a58eed2763abdlfeld4023138af05bbf7
3512 | | \ Merge: 44a1cc5 2f09a64
3513 | | | Author: oracleofnj <jared.samet@aya.yale.edu>
3514 | | | Date:   Mon Oct 24 23:11:50 2016 -0400
3515 | | |
3516 | | |     Merge in expressions section
3517 | | |
3518 | | * commit 2f09a643221dec47af99592d0a53e15bcc7d67d7
3519 | | | Author: Kevin <kevinye1113@gmail.com>
3520 | | | Date:   Mon Oct 24 15:52:10 2016 -0400
3521 | | |
3522 | | |     Added the Expression Section 4 to LRM
3523 | | |
3524 | | * commit 8cd39aca8a29d19fe986ad4e7a3540fa4347221f
3525 | | | \ Merge: e5d2478 3609366
3526 | | | | Author: Kevin <kevinye1113@gmail.com>
3527 | | | | Date:   Mon Oct 24 11:05:33 2016 -0400
3528 | | | |
3529 | | | |     Added string literals to scanner
3530 | | | |
3531 | | * | commit e5d247809c610f428568dce665213019bc368047
3532 | | | | Author: Kevin <kevinye1113@gmail.com>
3533 | | | | Date:   Mon Oct 24 11:00:39 2016 -0400
3534 | | | |
3535 | | | |     Added string literals to scanner
3536 | | | |
3537 | * | | commit 44a1cc53aee333cb2d9832f66c0750b8a7add7d8
3538 | | \ \ \ Merge: 1ea3c28 3609366
3539 | | | | / Author: oracleofnj <jared.samet@aya.yale.edu>
3540 | | | | | Date:   Mon Oct 24 23:06:07 2016 -0400
3541 | | | | |
3542 | | | | |     Merge scanner changes and add regexp to properly escape strings
3543 | | | | |
3544 | | * | commit 36093668180db647b45e208d1dfe0158e7281281
3545 | | | | Author: kevinyel <kevinyel@users.noreply.github.com>
3546 | | | | Date:   Thu Oct 20 21:14:00 2016 -0400
3547 | | | |
3548 | | | |     Update scanner.mll
3549 | | | |
3550 | | * | commit 0d57652f53d8a6f4dbbb84d58a6807e5ef59a6fe
3551 | | | | Author: Kevin <kevinye1113@gmail.com>

```

```

3552 | | | | Date: Thu Oct 20 21:10:27 2016 -0400
3553 | | | |
3554 | | | | Fixed bug in scanner
3555 | | | |
3556 | | * | commit 1848813885a8c826151e62a27b4ef97b99004a96
3557 | | | | Author: Kevin <kevinye1113@gmail.com>
3558 | | | | Date: Thu Oct 20 20:21:49 2016 -0400
3559 | | | |
3560 | | | | Made scanner
3561 | | | |
3562 | * | | commit 1ea3c283f511068ed0886e67e5e65e974b646015
3563 | | \ \ Merge: a692466 ec7cc9c

3820 | | | | | | Completed initial functions section doc
3821 | | | | | |
3822 | | | * | | | commit 0797f328f6f6f6e696a72b1222d4cab38f8e8507
3823 | | | | | | Author: Nigel Schuster <nigel.schusters@googlemail.com>
3824 | | | | | | Date: Thu Oct 20 13:40:00 2016 -0400
3825 | | | | | |
3826 | | | | | | Changed subsection header
3827 | | | | | |
3828 | | | * | | | commit 9df31f7322f58cbcb1b14ea9740b102750e0321ae
3829 | | | | | | Author: Nigel Schuster <nigel.schusters@googlemail.com>
3830 | | | | | | Date: Thu Oct 20 11:16:35 2016 -0400
3831 | | | | | |

```

```

3832 | | | | | Added dimension section
3833 | | | | |
3834 | | | * | | commit 8939903db79ed9dela8e4b97fc02e79b4be54b61
3835 | | | | | Author: Nigel Schuster <nigel.schusters@googlemail.com>
3836 | | | | | Date: Wed Oct 19 12:28:09 2016 -0400
3837 | | | | |
3838 | | | | | Started working on Functions
3839 | | | | |
3840 | | | * | | commit cae3b37031dc87451ff03790eb6321dce42c516b
3841 | | | | | Author: Nigel Schuster <nigel.schusters@googlemail.com>
3842 | | | | | Date: Thu Oct 20 11:16:35 2016 -0400
3843 | | | | |
3844 | | | | | Added dimension section
3845 | | | | |
3846 | | | * | | commit 049c95d512ce6e6e8e48d4b2c838fd06df40b619
3847 | | _|/ / / Author: Nigel Schuster <nigel.schusters@googlemail.com>
3848 | /| | | | Date: Wed Oct 19 12:28:09 2016 -0400
3849 | | | | |
3850 | | | | | Started working on Functions
3851 | | | | |
3852 | | | | * commit 167ddd2addae79549eb6d887b98bee35cf2cc4cf
3853 | | | | | Author: Neitsch <ns3158@columbia.edu>
3854 | | | | | Date: Sun Oct 23 17:18:35 2016 -0400
3855 | | | | |
3856 | | | | | Removed test output
3857 | | | | |
3858 | | | | * commit 84d20b5448f24b98f308c1fb319f213de230d4f1
3859 | | | | / Author: Neitsch <ns3158@columbia.edu>
3860 | | | | | Date: Sun Oct 23 16:01:00 2016 -0400
3861 | | | | |
3862 | | | | | Comparing sample code with correctly parsed code in samples_comp
3863 | | | | |
3864 | | | | * commit 4652c6727f848dd573a44509fb498729b28b3080
3865 | | _|/ Author: Neitsch <ns3158@columbia.edu>
3866 | /| | | Date: Sun Oct 23 15:00:35 2016 -0400
3867 | | | | |
3868 | | | | | Added simple TCs, Moved Makefile to oasis config
3869 | | | | |
3870 * | | | | commit 143fcba457b49d2c4ab1495d17b830534554508e
3871 | \ \ \ Merge: 660de8c a726236
3872 | | | | | Author: Jared Samet <jared.samet@aya.yale.edu>
3873 | | | | | Date: Sat Oct 22 23:23:10 2016 -0400
3874 | | | | |
3875 | | | | | Merge pull request #16 from Neitsch/more-AST
3876 | | | | |
3877 | | | | | Hook up scanner and parser
3878 | | | | |
3879 | * | | | | commit a7262368b391c2031c66cfcf1d9fd6224749be69
3880 | | | | | Author: oracleofnj <jared.samet@aya.yale.edu>
3881 | | | | | Date: Sat Oct 22 20:51:27 2016 -0400
3882 | | | | |
3883 | | | | | Add comments and sample program
3884 | | | | |
3885 | | | | | * Added multiline comments using microC code
3886 | | | | | * Added one-line comments but didn't test it yet
3887 | | | | | * Added example file sequence.xtnd which is the program from proposal

```

```

3888 | | | |
3889 | | | | To try:
3890 | | | |
3891 | | | | $ make
3892 | | | | $ ./jsonify < sequence.xtnd
3893 | | | |
3894 | | | | paste output into https://jqplay.org/
3895 | | | |
3896 | * | | commit 8db40989c4efe4ecefdb8409d45fe8347adc0c79
3897 | | | | Author: oracleofnj <jared.samet@aya.yale.edu>
3898 | | | | Date: Sat Oct 22 19:44:48 2016 -0400
3899 | | | |
3900 | | | | Fix minor grammar bug
3901 | | | |
3902 | | | | * foo[:4,:5] was not being accepted
3903 | | | | * Added rules to lslice and rslice to allow this
3904 | | | |
3905 | * | | commit 80754c3f3072609502c902d6d26c2e6c33885a84
3906 | / / / Author: oracleofnj <jared.samet@aya.yale.edu>
3907 | | | | Date: Sat Oct 22 18:19:27 2016 -0400
3908 | | | |
3909 | | | | Hook up scanner and parser
3910 | | | |
3911 | | | | * Added hand coded jsonification
3912 | | | | * Didn't look like Yojson would work with our types
3913 | | | | * Currently not working on any input besides EOF
3914 | | | | * Added temporary makefile
3915 | | | |
3916 | * | | commit 660de8c848406e8f5fffe099610b6147bc553cad
3917 | / / Author: Jared Samet <jared.samet@aya.yale.edu>
3918 | | | | Date: Sat Oct 22 13:54:32 2016 -0400
3919 | | | |
3920 | | | | Add stuff to the grammar, minor corrections (#14)
3921 | | | |
3922 | | | | * Started AST
3923 | | | |
3924 | | | | * Made scanner
3925 | | | |
3926 | | | | * Fixed bug in scanner
3927 | | | |
3928 | | | | * Update scanner.mll
3929 | | | |
3930 | | | | * Add stuff to the grammar, minor corrections
3931 | | | |
3932 | | | | Operators, in order of precedence (lowest first)
3933 | | | | * LOGOR ||
3934 | | | | * LOGAND &&
3935 | | | | * EQ NOTEQ LT GT LTEQ GTEQ == != < > <= >=
3936 | | | | * PLUS MINUS BITOR BITXOR + - | ^
3937 | | | | * TIMES DIVIDE MOD LSHIFT RSHIFT BITAND * / % << >> &
3938 | | | | * POWER **
3939 | | | | * BITNOT LOGNOT NEG ~ ! -
3940 | | | | * I took the precedence from Golang
3941 | | | |
3942 | | | | String and char literals
3943 | | | | New token ASN which is = (as opposed to EQ ==)

```

```

3944 | |
3945 | |     Range literals
3946 | |     * {1, 2, 3; 4, 5, 6} is a 2x3 range
3947 | |     * {foo(1); bar(2)} should work too
3948 | |     * The semantic analysis phase will be responsible
3949 | |     *   for ensuring that the dimensions make sense
3950 | |     * Had to add mandatory parentheses to switch(cond) to
3951 | |     *   avoid shift/reduce conflicts but C has that anyway
3952 | |
3953 | |     * Allow general expr slicing, imports and globals
3954 | |     * New HASH token #
3955 | |     * New IMPORT and GLOBAL tokens ("import", "global")
3956 | |
3957 | |     Expr slicing:
3958 | |     * rls_sel no longer -> epsilon
3959 | |     * replaced by expr -> expr rhs_sel, expr -> ID, expr -> HASH expr
3960 | |
3961 | |     Import:
3962 | |     * import "othermodule";
3963 | |
3964 | |     Global variables:
3965 | |     * global PI := 3.14159;
3966 | |     * global [3,5] foo; is legal but has no effect
3967 | |
3968 | |     Program structure:
3969 | |     * imports followed by globals followed by functions
3970 | |     * This should theoretically be mix-and-matchable without much more work
3971 | |
3972 | |     Size inference:
3973 | |     * foo := "Hello, world!" right now results in [1,1] foo == "H"
3974 | |     * Semantic not grammar issue
3975 | |
3976 | |     * Fix error in col_list production
3977 | |
3978 | |     * Remove intermediate files
3979 | |
3980 | |     * Remove intermediate files
3981 | |
3982 | |     * Rework AST
3983 | |
3984 * |   commit a15772cba8b1fd16e7d21da07ec9b89d34b3062e
3985 | \ \   Merge: d8794e9 dee63c7
3986 | | /   Author: Ishaan Kolluri <ishaankolluri@users.noreply.github.com>
3987 | / \   Date:   Thu Oct 20 13:38:08 2016 -0400
3988 | |
3989 | |       Merge pull request #10 from ishaankolluri/LRM
3990 | |
3991 | |       Initial LRM Commit
3992 | |
3993 | *   commit dee63c70c8c9e7396e255662c302f3d77a7bf7db
3994 | | \   Merge: 4d763cb dc93dbf
3995 | | |   Author: Ishaan Kolluri <ishaankolluri@users.noreply.github.com>
3996 | | |   Date:   Thu Oct 20 13:26:28 2016 -0400
3997 | | |
3998 | | |   Merge pull request #1 from Neitsch/grammar-doc
3999 | | |

```

```

4000 | | | Grammar import
4001 | | |
4002 | | * commit dc93dbfa68ff7ee65eb38ce8a26baf081da0fe30
4003 | | / Author: Nigel Schuster <nigel.schusters@googlemail.com>
4004 | | Date: Thu Oct 20 13:18:29 2016 -0400
4005 | |
4006 | | Grammar import
4007 | |
4008 | | * commit 4d763cbd2505f38028dc9ba820c02aea2b66a380
4009 | | / Author: Ishaan Kolluri <ishaankolluri@gmail.com>
4010 | | Date: Thu Oct 20 12:21:21 2016 -0400
4011 | |
4012 | | Made refactor and edits to intro section of LRM
4013 | |
4014 | | * commit e7443cc478f120ea4aff5db91f7dbfa55e94c4b4
4015 | | \ Merge: 02a5c17 40c2a5a
4016 | | / Author: Ishaan Kolluri <ishaankolluri@gmail.com>
4017 | | / Date: Thu Oct 20 11:46:54 2016 -0400
4018 | | |
4019 | | | Merging
4020 | | |
4021 | | * commit 40c2a5aa75310086dbcfab58eaale3ce86ccbe72
4022 | | / Author: ishaankolluri <ishaankolluri@gmail.com>
4023 | | / Date: Wed Oct 19 03:43:06 2016 -0400
4024 | |
4025 | | Initial LRM Commit part 1
4026 | |
4027 | | * commit 02a5c175a1032b34fbf0f1726596270d934aec11
4028 | | / Author: Ishaan Kolluri <ishaankolluri@gmail.com>
4029 | | Date: Tue Oct 18 18:38:21 2016 -0400
4030 | |
4031 | | Added LRM initial info
4032 | |
4033 | * commit d8794e96f4544ed0af9678ecb55e83e1e4b46c25
4034 | \ Merge: 5111202 70aalb9
4035 | | Author: Ishaan Kolluri <ishaankolluri@users.noreply.github.com>
4036 | | Date: Mon Oct 17 19:47:42 2016 -0400
4037 | |
4038 | | Merge pull request #9 from Neitsch/documentation
4039 | |
4040 | | Added PDF Latex template
4041 | |
4042 | | * commit 70aalb9846e135d1e8e3f2159148d1bc4e9ea0d8
4043 | | / Author: Nigel Schuster <nigel.schusters@googlemail.com>
4044 | | Date: Sun Oct 16 13:36:23 2016 -0400
4045 | |
4046 | | Added PDF Latex template
4047 | |
4048 | * commit 5111202a9f0992d7b5a3f934f4109552064df4e1
4049 | / Author: Jared Samet <jared.samet@aya.yale.edu>
4050 | / Date: Fri Oct 14 19:59:45 2016 -0400
4051 | |
4052 | | Added a bunch of stuff to the grammar: (#8)
4053 | |
4054 | | * Cleaned up the existing token list
4055 | | ** Removed a couple duplicates/unused that menhir flagged

```

```

4056 |      ** Added PLUS MINUS TIMES DIVIDE MOD
4057 |      ** Added SWITCH CASE DEFAULT
4058 |      ** Added UNDERSCORE (for [_ ,2] in function declaration)
4059 |      ** Separated LITERAL into LIT_INT and LIT_FLOAT (dimensions can
4060 |      **      only be integers)
4061 |      ** Added a couple associativity/precedence rules that
4062 |      **      are undoubtedly incomplete
4063 |
4064 |      * Made hopefully all the optional / repetition cases consistent
4065 |      ** Function declarations [] foo() {}      [] bar() {}      ....
4066 |      ** Function parameters ()      ([] foo)      ([]foo, []bar), ...
4067 |      ** Statements stmt1; stmt2; ...
4068 |      ** Function arguments (), (foo), (foo, bar), ...
4069 |      ** Switch cases (>=1 required) case foo1: bar1; case foo2: bar2; ...
4070 |      ** Case conditions (>=1 required) case foo1, foo2, ...
4071 |
4072 |      * Added a few expression types
4073 |      ** switch [expr] {case foo_1a, foo_1b: bar1; case foo_2: bar2}
4074 |      *** intended to work as in Go: if condition is present, evaluates
4075 |      *** to first case where foo == expr. if condition is absent, evaluates
4076 |      *** to first case where foo is truthy.
4077 |      ** function calls foo(x,y,z)
4078 |      ** expression in parentheses
4079 |      ** literals
4080 |
4081 |      * Slicing
4082 |      ** Refactored slice_val into lslice_val and rslice_val
4083 |      ** lslice_val can be any expr
4084 |      ** rslice_val can be any expr or [expr]
4085 |      ** both types of selections and slices are now consistent until
4086 |      **      you get down to val
4087 |
4088 |      * Function return dimensions
4089 |      ** Added _ to the allowed return dimension (for [_ ,2])
4090 |
4091 | * commit da967e421b3f6887acd7c0d659f13d60b1898b6a
4092 | | Author: Nigel Schuster <Neitsch@users.noreply.github.com>
4093 | | Date:   Wed Oct 12 13:24:50 2016 -0400
4094 | |
4095 | |     CFG Grammar (#6)
4096 | |
4097 | |     Added simple parser that has most of our rules.
4098 | |
4099 | * commit fea4e4b262513b011775899f35d17e29cb7a1642
4100 | | Author: Nigel Schuster <Neitsch@users.noreply.github.com>
4101 | | Date:   Sat Oct 8 11:42:39 2016 -0400
4102 | |
4103 | |     There is no need to constantly build all branches. (#2)
4104 | |
4105 | |     Only building master.
4106 | |
4107 | * commit 7a5ccfc7ada9ddefba61d5da995a7949d7fd1e9d
4108 | | Author: Jared Samet <jared.samet@aya.yale.edu>
4109 | | Date:   Sat Oct 8 11:31:31 2016 -0400
4110 | |
4111 | |     Added greeting and newlines (#4)

```

```

4112 |
4113 * commit 10b17f7772e4f7521d248b9656a917df781d96a4
4114 | Author: Nigel Schuster <Neitsch@users.noreply.github.com>
4115 | Date: Sat Oct 8 11:31:08 2016 -0400
4116 |
4117 | Imported microc (#5)
4118 |
4119 | * Imported microc
4120 | * Fixed sources
4121 |
4122 * commit 726456fcc25a785cc26d90845b8c0c6292fec61f
4123 | Author: Ishaan Kolluri <ishaankolluri@users.noreply.github.com>
4124 | Date: Tue Sep 20 09:45:07 2016 -0400
4125 |
4126 | [test] Add sample greeting to repo (#3)
4127 |
4128 | * Added sample greeting
4129 |
4130 | * Add double semicolon notation
4131 |
4132 * commit 9a2183d3439d67d696ec6babcb6c2be233c2f3bd
4133 | Author: Nigel Schuster <nigel.schusters@googlemail.com>
4134 | Date: Thu Sep 15 18:44:00 2016 -0400
4135 |
4136 | Added merlin config
4137 |
4138 * commit 163e1761ac0f8113e017511f456029282e665d8b
4139 | Author: Nigel Schuster <nigel.schusters@googlemail.com>
4140 | Date: Wed Sep 14 18:51:53 2016 -0400
4141 |
4142 | Moved whole build to script
4143 |
4144 * commit d401eeaab71e5e927932c403be099e24700cdc8f
4145 | Author: Nigel Schuster <nigel.schusters@googlemail.com>
4146 | Date: Wed Sep 14 18:43:58 2016 -0400
4147 |
4148 | Added oasis opam package
4149 |
4150 * commit ba7fd9c3ccaa617d0709b395da84b43cca2c1860
4151 | Author: Nigel Schuster <nigel.schusters@googlemail.com>
4152 | Date: Wed Sep 14 18:38:58 2016 -0400
4153 |
4154 | Added ocaml configure (maybe this helps travis)
4155 |
4156 * commit a461eae15fdf84b3a580af6cfa46451ab490b31
4157 | Author: Nigel Schuster <nigel.schusters@googlemail.com>
4158 | Date: Wed Sep 14 18:26:10 2016 -0400
4159 |
4160 | Configuring opam environment for travis
4161 |
4162 * commit ba2df2f48c360588df163b22ad674297e3ae8b16
4163 | Author: Nigel Schuster <nigel.schusters@googlemail.com>
4164 | Date: Wed Sep 14 18:19:26 2016 -0400
4165 |
4166 | Added ocaml native compiler to apt package list
4167 |

```

```

4168 * commit a8e5958abf68181b0a7b4e7995a2cd7044de3bd4
4169 | Author: Nigel Schuster <nigel.schusters@googlemail.com>
4170 | Date:   Wed Sep 14 17:24:36 2016 -0400
4171 |
4172 |     Added some more (possibly necessary opam packages
4173 |
4174 * commit c54f5e367d0d985d54bf89630e51a59203f91065
4175 | Author: Nigel Schuster <nigel.schusters@googlemail.com>
4176 | Date:   Wed Sep 14 17:18:32 2016 -0400
4177 |
4178 |     Missed opam option
4179 |
4180 * commit b10adf0f2964eff28de9f33618806e7d614573fc
4181 | Author: Nigel Schuster <nigel.schusters@googlemail.com>
4182 | Date:   Wed Sep 14 17:13:57 2016 -0400
4183 |
4184 |     Fixed opam install
4185 |
4186 * commit 124f7f37083351df7beaed11cc77d503blff0d9b
4187 | Author: Nigel Schuster <nigel.schusters@googlemail.com>
4188 | Date:   Wed Sep 14 17:08:09 2016 -0400
4189 |
4190 |     Fixed YML error
4191 |
4192 * commit 4909fa82e010b27f9dc0f2489ebf5cad790e4e3
4193 | Author: Nigel Schuster <nigel.schusters@googlemail.com>
4194 | Date:   Wed Sep 14 17:03:54 2016 -0400
4195 |
4196 |     Using avsm source
4197 |
4198 * commit 4b24046db1b50e97bac103170056c77be7273155
4199 | Author: Nigel Schuster <nigel.schusters@googlemail.com>
4200 | Date:   Wed Sep 14 16:58:33 2016 -0400
4201 |
4202 |     Allow sudo
4203 |
4204 * commit e7b50dbb8b2c463fa67f9ce07b6a8413f905b259
4205 | Author: Nigel Schuster <nigel.schusters@googlemail.com>
4206 | Date:   Wed Sep 14 16:56:57 2016 -0400
4207 |
4208 |     Fixed setup order
4209 |
4210 * commit f6d7ac43f5f27fc4c641667bfe8e24ea3b0d7117
4211 | Author: Nigel Schuster <nigel.schusters@googlemail.com>
4212 | Date:   Wed Sep 14 16:50:02 2016 -0400
4213 |
4214 |     Manually installing apt packages
4215 |
4216 * commit f4084ab464f4f3097d11e0582328f351c40d9516
4217 | Author: Nigel Schuster <nigel.schusters@googlemail.com>
4218 | Date:   Wed Sep 14 16:40:55 2016 -0400
4219 |
4220 |     Test commit
4221 |
4222 * commit d7c5e9a4dadd09c6d7ad97fc727f61aff1e88779
4223 | Author: Nigel Schuster <Neitsch@users.noreply.github.com>
