1. Introduction

Extend is a declarative programming language meant to support spreadsheet-like functionality. It contains features such as side-effect-free values, immutability, and automatic formula adjustments relative to rows and columns. Extend is compiled to the LLVM (Low Level Virtual Machine) intermediate representation, which in turn is reduced to machine assembly. Extend takes inspiration from software such as Microsoft Excel, which allows users to link several formulae on dependent groups of data together, but takes this technology a step further by allowing users to encapsulate such calculations as functions.

1.1 Inspiration & Use Cases

Inspiration

The design goal of our language was to be "a spreadsheet you can compile". Extend was conceptualized to address the limitations that prevented the spreadsheet environment from evolving into a compiled, flexible programming language. To create this, there were three main things that needed to be changed about the way interactive spreadsheets work:

- The language needs reusable functions as opposed to having to copy & paste a block of cells.
- Cell ranges need to be created with dynamic runtime-determined dimensions.
- Cells need to be able to contain composite values in addition to single numbers or strings.

With these changes in mind, we attempted to keep the semantics as similar as possible to traditional spreadsheet programs; this meant implementing a dynamically typed language that is tolerant of potential errors in its input data. Extend degrades gracefully in the presence of potential data errors.

Spreadsheet applications cannot be 'run' on different sets of input data. Extend was conceptualized as a language to create standalone executables that can be repeatedly run on multiple files, thereby removing the need to manually enter inputs. In building this language, our mission was to bring the best of spreadsheets and computation into one product.

Complex Calculations Across Many Inputs

Extend is spiritually closer in behavior to Microsoft Excel than traditional imperative programming languages. The order of computation is determined implicitly by the language rather than explicitly by the developer. In addition, in one line of code, a single formula can be assigned to all the cells in a variable. The feature acts similarly to Python's list comprehension, or OCaml's `List.map` functionality.

Flexibility

Extend allows the dimensions of ranges to be determined dynamically at runtime, and handles most type errors by degrading gracefully instead of crashing the program. The standard library that Extend delivers

includes a subset of the functions that are built into conventional spreadsheet applications. As many of these as possible were implemented in Extend itself.

2. Language Usage Tutorial

This will cover the configuration of the user's environment and the usage of Extend's features.

2.1 Setup

The Extend compiler requires that the OCaml Language and LLVM be installed on the host machine. Development was done in a virtual machine running the 64-bit Ubuntu operating system. In order to quickly get Extend up and running, please use [this virtual machine](#), which has been provided as part of the course.

After booting up the virtual machine, clone the Extend git repository:

```
1 git clone https://github.com/ExtendLang/Extend.git
```

2.2 Compiling and Running Extend Code

To build the Extend compiler, the first steps are the following.

```
1 cd Extend/  
2 make
```

If this does not successfully build, run `eval 'opam config env'`, which should configure the environment to use OPAM packages. Alternatively, add this command to your bash profile.

After running `make`, you should see a `main.byte` file. To compile and run an Extend program, we have provided a shell script to simplify the process for the user:

```
1 ./compile.sh samples/helloworld.xtnd
```

This should produce an `out` file. Running `./out` should successfully execute the program.

2.3 Illustrating the Benefits of Extend

Spreadsheet applications require the use of manual input in order to apply the same calculation to a different set of data. Extend aims to tackle this problem by offering portability. Below is an example of a spreadsheet user calculating the unit vector of a column vector:

	A	B	C	D	E
1	1	1			0.050965
2	2	4			0.101929
3	3	9			0.152894
4	4	16			0.203859
5	5	25			0.254824
6	6	36			0.305788
7	7	49			0.356753
8	8	64			0.407718
9	9	81			0.458682
10	10	100			0.509647
11	=A!*A!		385	19.62142	=A!/\$D\$11
12			=SUM(B1:B10)	=C11^0.5	

The Excel user must manually input the data, and additionally make space for the intermediate steps of the calculation. If the number of elements of the vector were changed, the formulas would need to be changed in the spreadsheet; similarly, if you needed to do this on a second vector, you would have to copy and paste the cells doing intermediate calculations. Below is the equivalent function in Extend, written to work on any column vector that is passed in:

```

1  normalize_column_vector([m,1] arg) {
2      [m,1] squared_lengths := #arg * #arg, normalized := #arg / vector_norm;
3      vector_norm := sqrt(sum(squared_lengths));
4      return normalized;
5  }
```

Another simple example is concatenating a row of strings of variable length with a common delimiter. This in an entirely manual operation for the spreadsheet user; a step-by-step attempt is shown below.

	A	B	C	D	E	F
1	hello	world	hello again	,	<- comma, space	
2						
3	hello,	<- This fails.				
4	=CONCATENATE(A1:C1, D1)					
5						
6	hello	hello, world	hello, world, hello again			
7	=A1	=CONCATENATE(A1,D1,B1)	=CONCATENATE(B6,D1,C1)			

Performing a delimiter 'join' like the above can be performed in a simple program in Extend without knowing the size of the row. The following function, which is included in the Extend standard library, performs this on arguments of any size and can be reused throughout the program.

```

1  main(args) {
2      bar := {"Hello", "Goodbye", "Hello Again"};
3      str := ", ";
4      return print_endline(concatRow(bar, str));\\ prints "Hello, Goodbye, Hello Again"
5  }
6
7  concatRow([1,n] cells, joiner) {
8      [1,n] accum;
9      accum[0,0] = #cells;
10     accum[0,1:] = accum[[-1]] + joiner + #cells;
11     return accum[-1];
12 }
```

As evidenced above by simple examples, Extend offers flexibility that is significantly harder to achieve with conventional spreadsheet applications. As the nature of the data grows in complexity and variety, Extend's value increases.

2.4 Writing Extend Code - The Basics

As is tradition, here is "Hello World" in Extend. The following program, `helloworld.xtnd`, illustrates a basic usage of the Extend language.

```
1  main(args) {
2      foo := printv(1,"Hello World\n") -> 0;
3      return foo;
4  }
```

Below is a short tour of the features of Extend. More detail can be found in the next chapter - the Language Reference Manual.

Adjusting to Extend's Declarative Nature

The biggest difference between Extend and most traditional programming languages is that the concept of an imperative statement does not exist. An Extend function consists solely of variable declarations, formula assignments, and a return expression. When a function is called, its **return** expression is evaluated, along with the values of any variables that the return expression depends on. In a traditional imperative language, the order of operations is determined explicitly by the developer; in Extend, the order is determined implicitly by the desired result.

The following file compiles and prints successfully.

```
1  main(args) {
2      foo := "Hello World!";    // Combined var declaration and formula assignment
3      return print_endline(foo); // Return expression is a call to print_endline().
4  }
```

However, the file below is not a legal Extend program:

```
1  main(args) {
2      foo := "Hello World!"; // OK
3      print_endline(foo);    // Not OK
4      return foo;
5  }
```

As illustrated, Extend only evaluates what is needed to produce the value required by **return**. Any non-essential declarations or formula assignments will not be evaluated by the program.

Functions

An Extend program is mostly composed of functions. They are declared with the syntax `function_name([optional_dimensions] function_arguments){...}`. Below is the syntax of the **main** function, which is needed to run Extend code, within a simple Extend program.

```
1  main(args) {
2      return 0;
3  }
```

The return type of a function is a value that can be of any type or dimensions. **Ranges** will be discussed in a later section of this chapter. A function is composed of variable declarations and formula assignments and concludes with the **return** statement. Note that the **return** statement is always the last statement in the function.

Function Parameters

Function parameters consist of zero or more ranges, signed with an optional dimension. If the arguments have been written with dimensions, those dimensions will be verified at runtime. this can either be used to initialize a variable with the dimensions of the argument, or verify that the dimensions are what the function expects.

```
1     foo([m,n] arg){
2         return m * n; \\ m and n initialized through arg
3     }
4
5     bar([1,1] arg){
6         return 0; \\ 1 by 1 ranges should be primitive data types. If arg is not a
           primitive, a runtime error will be thrown
7     }
```

Data Types

Extend has three primitive data types: Numbers, Strings, and `empty`; and one composite type, `Range`. An example of each is shown below.

```
1     myNumber    := 5;
2     myString    := "Hello World";
3     myEmpty     := empty;
4     my2x3Range  := {3, 4, "five"; "a", "b", "c"};
```

Variables

In Extend, **variables** are composed of cells to which formulas are assigned. The first time (and only the first time!) an individual cell is referenced by an expression, its value is calculated according to its assigned formula. A cell's value is not calculated if the cell is never referred to, and is never recalculated; all cell values are immutable. A cell's value can be any of Extend's types, and different cells of a single variable can have different types.

```
1     [1,2] foo; // Declares a variable with 1 row and 2 columns (2 cells total)
2     [1,3] bar := 4; // Declares a variable with 1 row and 3 columns and
3                   // assigns the literal value 4 as the formula for each cell
4     [1,2] baz;           // Declares a 1x2 variable baz
5     baz[0,0] = "first";   // Assigns literal "first" as the formula for the
6     baz[0,1] = 1 + 1;     // 1st cell and the expression 1+1 for the 2nd cell
7     life := 6, universe := 7; // Declares 1x1 variables life and universe
8     answer := life * universe; // Declares a 1x1 variable the_answer and assigns
9                                // the formula life * universe to its sole cell
10    [1,10] half_and_half; // Declares a 1x10 variable half_and_half
11    half_and_half[0,0:5] = "milk"; // Assigns "milk" to the first five cells
12    half_and_half[0,5:10] = "cream"; // and "cream" to the second five cells
```

Note that we declare a variable and assign a formula to all of its cells in a single line with `:=`. If the variable has already been declared, a formula must be assigned using `=` instead of `:=`. As illustrated in this example, a single formula can be assigned to multiple cells of a variable with the slice syntax. The converse is not true: multiple formulas applying to a single cell will cause a runtime error. The contents of the slice, as well as the dimensions of the variable, can be any expression that evaluates to a number, not just a literal number. For example, this code snippet assigns the dimensions based on the `howBig()` function and the "left" and "right" formulas based on the `breakpoint()` function:

```

1     breakpoint() {
2         return 7;
3     }
4     howBig() {
5         return 11;
6     }
7     foo_func() {
8         [1,howBig()] foo;
9         foo[0, :breakpoint()] = "left";
10        foo[0, breakpoint():-1] = "right";
11        foo[0, -1] = "last";
12        return foo;
13    }

```

This example also illustrates that the start (or end) index of a slice can be omitted if the developer wants the formula to apply from the beginning (or to the end) of the dimension, and that negative numbers can be used in a slice to count backwards from the end. As with all values in Extend, the dimensions of a variable, and the slices to which a formula applies, are immutable. The first time a variable is referred to (directly or indirectly) by the return expression, its dimensions and the formula assignment slices are computed; from that point on, they never change. In the example above, the `howBig()` function is invoked once, but the `breakpoint()` function is actually called twice: once for the "left" formula, and once for the "right" formula.

Variables vs. Ranges

A variable is not a data type; it is a collection of one or more cells with assigned formulas. A range is a value, which is internally implemented as a pointer to a subset of a variable's cells. A range is always composed of more than one value; a variable may have a single cell. The variable "backing" a range may not have been explicitly defined by the developer; for example, range literals are implemented using an anonymous variable.

Range Slicing & Selection

Python-style array-slicing syntax can be applied to ranges, which will return a subrange based on either absolute or relative indexing. All indices are zero-based.

```

1     foo[0,2] \\ The cell in the first row, third column
2     foo[0,:] \\ The range of cells in the first row
3     foo[0,[1]] \\ The range in the column that is 1 column right of the left-hand-
                side cell.
4     foo[,] \\ Cell in first row, first column if 1 by 1. If not, then relative first
                row and relative first column

```

More examples and detail can be found in the next chapter.

The Hash Operator

A common case for ranges in Excel is to perform calculations on specific cells. For example, `foo[,]` is commonly used to retrieve the cell that is being calculated on. Since this is a popular use case, the `#` operator will perform the same functionality.

Application on Ranges

Extend, in the vein of spreadsheets, allows the programmer to apply functions cell-wise on a range. Using the `#` operator, we can perform cell-wise multiplication across two ranges.

```

1     foo([m,n] arg1, [m,n] arg2){
2         [m,n] bar := #arg1 * #arg2; \\ Multiplies the cell in arg1 with the
           corresponding cell in arg2.
3         return bar;
4     }

```

This is an incredibly powerful aspect of Extend. Make sure to study it well!

Range Attribute Functions

Extend has the `row()` and `column()` functions, which respectively return the row and column of the cell that is being calculated at that point in time. There is also a `size(expr)` function, which returns a 1 by 2 range; the first cell contains the number of rows, and the second cell contains the number of columns.

Cell Evaluation, Side Effects, and Precedence Expressions

As mentioned before, a cell's value is calculated at most once. It is evaluated when it is the only cell selected from a variable, or when a selection containing the cell is assigned as a range to another cell. In general, the language is designed so you don't have to think about this! However, in the case of formulas that call functions with side effects, it's important to understand the behavior. When necessary, a precedence expression (using the `->` operator) can be used to force the evaluation of one expression before another. A precedence expression calculates the first expression, discards the result, and evaluates to the second expression. The following example should help clarify how cell evaluation is performed:

```

1     main(args) {
2         foo := print_endline("Once") -> 2;
3         bar := foo + foo;
4         return print_endline(bar);
5     }

```

This program prints "Once" and then prints 4. Before calling `print_endline`, Extend calculates the value of `bar`, which in turn requires the value of `foo` (twice). The first time `foo`'s value is calculated, `print_endline()` is called with the argument "Once", and then `foo` evaluates to the constant 2. The second time that `foo`'s value is required to calculate `bar`, it's already available: it is 2. Therefore, `print_endline("Once")` is not called a second time.

Operators

Extend includes a comprehensive set of operators. Each category is listed in order of precedence. A more detailed explanation of each operator can be found in the Language Reference Manual.

Arithmetic Operators

- Unary Operations: `-`
- Binary Operations: `**`, `*`, `/`, `%`, `+`, `-`

Bitwise Operators

- Unary Operations: `~`
- Binary Operations: `<<`, `>>`, `&`, `|`, `^`

Boolean Operators

- Unary Operations: `!`
- Binary Operations: `==`, `!=`, `<`, `>`, `<=`, `>=`, `&&`, `||`

String Concatenation

Note that the `+` symbol can be used to perform concatenation between two strings.

```
1 "Hello " + "World\n"
```

The size and typeof operators

Extend offers a `typeof(expr)` operator, which takes an expression and returns Number, String, Range, or Empty (as a string). It also has the `size(expr)` operator, which returns the dimensions of its argument as a 1 x 2 range.

Conditionals

There are two types of conditional expressions: the if-then-else (ternary) conditional and a `switch` expression.

If-Then-Else

The two equivalent ways to write the ternary expression are as follows:

C/Java style: `condition ? expr_if_true : expr_if_false`

Spreadsheet style: `if(condition, expr_if_true, expr_if_false)`

The Switch Expression

Below is an example of the switch expression used in a function:

```
1 odd_or_even(foo) {  
2   return switch(foo \% 2) {  
3     case 0: "Even";  
4     case 1: "Odd";  
5     default: "Not an integer";  
6   };  
7 }
```

In the example above, the `switch` expression used `foo % 2` as an argument; however, this is not required, so a switch expression can be used (as in Go) as a replacement for a sequence of if-then-else conditionals.

Import Statements

In Extend, you can import other Extend files at the top of your program via relative directory path. The use case is below:

```
1 import "../programs/stat_library.xtnd"
```

2.5 Standard Library Functions

Extend offers an assortment of standard library functions. Extend imports `stdlib.xtnd`, which has aggregated all the standard library functions for the user's disposal.

While their usage will be covered in more length in the Language Reference Manual, here are some of the more useful standard library functions to remember.

Basic Functions

The `toString()` Function

The `toString()` function takes an argument and renders its value as a string.

```
1 return "Hello " + toString(14); \\ "Hello 14"
```

The Print Function

As used throughout this tutorial, the `print_endline` function is used to print an expression with a newline.

Math Functions

Borrowing from C's standard library math functions, Extend offers: `sin`, `cos`, `tan`, `acos`, `asin`, `atan`, `sinh`, `cosh`, `tanh`, `exp`, `log`, `log10`, `sqrt`, `ceil`, `fabs` and `floor`.

```
1 main(args){
2     bar := sqrt(16);
3     return print_endline(bar) -> 0; \\ Prints 4 to stdout
4 }
```

File I/O

Extend has `open`, `close`, `read`, and `write` functions to interact with files. Usage is as follows:

```
1 main(args){
2     return write(STDOUT, read(open("test_file.txt", "r"),5)) -> 0; \\ Writes 5
3     characters from test_file.txt to stdout
4 }
```

Additional Standard Library Functions

Flatten

The `flatten` function turns a rectangular range into a long row vector.

```
1 flatten({1,2,3; 4,5,6}) // yields {1,2,3,4,5,6}
```

Match

The `match` function takes a row or column vector and a value, and locates the index of that value, if applicable

Binary Search

The `bsearch` function will search a sorted column vector for a value.

Statistics Functions

Extend additionally offers basic statistical functions such as `sum`, `max`, `avg`, and `stddev`.

Matrix Multiplication

The `mmult` function multiplies two compatible rectangular ranges together in matrix-fashion.

Concatenation

The `concatRow` function takes a column vector and a delimiter and returns a string of each element in the vector joined by the delimiter.

Repeat

The `repeat` function takes a string and number `x`, and returns a string where the argument string is repeated `x` times.

```
1 repeat("Hello", 3) \\ "HelloHelloHello"
```

Split & Split to Range

The `split` function takes a string and a splitter and returns a vector of the delimited characters. Expanding on this, the `splittoRange` function takes a string, row splitter, and column splitter and returns a rectangular range with the characters delimited by the splitters.

Parsing Strings

The `parseString` function leverages the above two functions to create an actual range with the characters parsed as numeric values.

Reverse

Reverse takes a string and reverses it.

Trim Functions

The `trim` function removes preceding and following whitespace from a string and returns the new string. Similarly, the `ltrim` function removes preceding whitespace, and `rtrim` the following whitespace.

Plotting Bar Charts

Providing a file handle, a row vector, and an equivalently sized vector of labels to `bar_chart` will allow the user to write a bar graph in GIF form to the file descriptor.

3. Language Reference Manual

3.1 Introduction to Extend

Extend is a domain-specific programming language used to designate ranges of cells as reusable functions. It is a dynamically-typed, statically-scoped, declarative language that uses lazy evaluation to carry out computations. Once computed, all values are immutable. In order to offer the best performance, Extend compiles down to LLVM.

Extend's syntax is meant to provide clear punctuation and easily understandable cell range access specifications, while borrowing elements from languages with C-style syntax for ease of development. Despite these syntactic similarities, the semantics of an Extend program have more in common with a spreadsheet such as Microsoft Excel than imperative languages such as C, Java or Python.

3.2 Structure of an Extend Program

An Extend program consists of one or more source files. A source file can contain any number of import directives, function definitions, global variable declarations, and external library declarations, in any order.

Import Statements

Import statements in Extend are written with `import`, followed by the name of a file in double quotes, and terminated with a semicolon. The syntax is as follows:

```
1 import "string.xtnd";
```

Extend imports act like `#include` in C, except that multiple imports of the same file are ignored. The imports are all aggregated into a single namespace.

Function Definitions

Function definitions comprise the bulk of an Extend program. In short, a function consists of a set of variable declarations, formula assignments, and a return expression. Each variable consists of cells; the values of each cell are, if necessary, calculated according to formulas which each apply to a specified subset of the cells. Each cell value, once calculated, is immutable. A couple examples follow for context; functions are described in detail in section 3.5.

```
1 isNumber(x) {
2     return typeof(x) == "Number";
3 }
4
5 sum_column([m,1] rng) {
6     /* Returns the sum of the values in the column, skipping any values that are non-
7        numeric */
7     [m,1] running_sum;
8     running_sum[0,0] = #rng;
```

```

9   running_sum[1:,0] = running_sum[[-1],] + (isNumber(#rng) ? #rng : 0);
10  return running_sum[-1];
11 }

```

Global Variables

In essence, global variable declarations function as constants in Extend. They are written with the keyword **global**, followed by a variable declaration in the combined variable declaration and assignment format described in section 3.5. As with local variables, the cell values of a global variable, once computed, are immutable. A few examples follow:

```

1  global pi := 3.14159265359;
2  global num_points := 24;
3  global [num_points,1]
4     circle_x_vals := cos(2 * pi * row() / num_points),
5     circle_y_vals := sin(2 * pi * row() / num_points);

```

External Library Declarations

An external library is declared with the **extern** keyword, followed by the name of an object file in double quotes, followed by a semicolon-delimited list of external function declarations enclosed by curly braces. A library declaration informs the compiler of the functions' names and signatures and instructs the compiler to link the object file when producing an executable. An external function declared as **foo** will call an appropriately written C function **extend_foo**. An example follows:

```

1  extern "mylib.o" {
2     foo(arg1, arg2);
3     bar();
4 }

```

This declaration would cause the compiler to link **mylib.o** and would make the C functions **extend_foo** and **extend_bar** available to Extend programs as **foo** and **bar** respectively. The required signature and format of the external functions is specified precisely in section 3.5.

main function

When a compiled Extend program is executed, the **main** function is evaluated. All computations necessary to calculate the return value of the function are performed, after which the program terminates. The **main** function must be a function of a single argument, conventionally denoted **args**, which is guaranteed to be a 1-by-n range containing the command line arguments.

Scoping and Namespace

For functions and for global variables, there is a single namespace that is shared between all files composing an Extend program, and they are visible throughout the entire program. Functions declared in external libraries share this namespace as well. For a local variable, the scope is the entire body of the function in which it is defined. Functions may declare local variables sharing a name with a global variable; inside that function, the name will refer to the local variable.

```

1  global x := "I'm a global";
2
3  foo() {
4     y := x; // Scope of x is entire function
5     x := "In here I'm a local";
6     return y; // Returns "In here I'm a local"

```

```

7 }
8
9 bar(x) {
10     return x; // Parameters mask globals; returns argument
11 }
12
13 baz() {
14     return x; // Returns "I'm a global"
15 }

```

3.3 Types and Literals

Extend has three primitive data types, **Number**, **String**, and **Empty**, and one composite type, **Range**.

Primitive Data Types

A **Number** is an immutable primitive value corresponding to a double-precision 64-bit binary format IEEE 754 value. Numbers can be written in an Extend source file as either integer or floating point constants; both are represented internally as floating-point values. There is no separate type representing an integer.

A **String** is an immutable primitive value that is internally represented a C-style null-terminated byte array corresponding to ASCII values. A String can be written in an Extend source file as a sequence of characters enclosed in double quotes, with the usual escaping conventions. Extend does not allow for slicing of strings to access specific characters; access to the contents of a string will only be available through standard library functions.

The **Empty** type can be written as the keyword **empty**, and serves a similar function to NULL in SQL; it represents the absence of a value.

Primitive Data Types	Examples
Number	42 or -5 or 2.71828 or 314159e-5
String	"Hello, World!\n" or "foo" or ""
Empty	empty

Ranges

Extend has one composite type, **Range**. A range borrows conceptually from spreadsheets; it is a group of cells with two dimensions, described as rows and columns. Each cell is assigned a formula that either evaluates to a Number, a String, **empty**, or another Range. Cell formulas are described in detail in section 3.5. A range can either be declared as described in section 3.5 or with a range literal expression. Ranges can be nested arbitrarily deeply and can be used to represent (immutable) lists, matrices, or more complicated data structures.

Range Literals

A range literal is a semicolon-delimited list of rows, enclosed in curly brackets. Each row is a comma-delimited list of numbers, strings, or range literals. A few examples follow:

```

1 legal_ranges() {
2     r1 := {"Don't"; "Panic"}; // two rows, one column
3     r2 := {"Don't", "Think", "Twice"}; // one row, three columns
4     r3 := {1,2,3;4,5,6;7,8,9}; // three rows, three columns
5     r4 := {"Hello";0,1,2,3,4}; // two rows, five columns

```

```

6   r5 := {{{{{1}}}}}; // one row, one column
7   r7 := {-1.5,-2.5,-2,"nested",-3.5}; // one row, four columns
8   return
9       print_endline(r1) ->print_endline(r2) ->print_endline(r3) ->
10      print_endline(r4) -> print_endline(r5) -> print_endline(r7);
11 }
12
13 main(args) {
14     return legal_ranges();
15 }

```

3.4 Expressions

Expressions in Extend allow for arithmetic and boolean operations, function calls, conditional branching, extraction of contents of other variables, string concatenation, and determination of the location of the cell containing the expression. The sections for boolean and conditional operators refer to *truthy* and *falsey* values: the **Number** 0 is the only falsey value; all other values are *truthy*. As **empty** represents the absence of a value, it is neither *truthy* nor *falsey*.

Arithmetic Operators

The arithmetic operators listed below take one or two expressions and return a number, if both expressions are Numbers, or **empty** otherwise. Operators grouped within the same inner box have the same level of precedence, and are listed from highest precedence to lowest precedence. All of the binary operators are infix operators, and, with the exception of exponentiation, are left-associative. Exponentiation, bitwise negation, and unary negation are right-associative. All of the unary operators are prefix operators. The bitwise operators round their operands to the nearest signed 32-bit integer (rounding half to even) before performing the operation and evaluate to a Number.

Operator	Description	Definition
<code>~</code>	Bitwise NOT	Performs a bitwise negation on the binary representation of an expression.
<code>-</code>	Unary negation	A simple negative sign to negate expressions.
<code>**</code>	Power	Returns the first expression raised to the power of the second expression
<code>*</code>	Multiplication	Multiplies two expressions
<code>/</code>	Division	Divides first expression by second.
<code>%</code>	Modulo	Finds the remainder by dividing the expression on the left side of the modulo by the right side expression.
<code><<</code>	Left Shift	Performs a bitwise left shift on the binary representation of an expression.
<code>>></code>	Right Shift	Performs a sign-propagating bitwise right shift on the binary representation of an expression.
<code>&</code>	Bitwise AND	Performs a bitwise AND between two expressions.
<code>+</code>	Addition	Adds two expressions together.
<code>-</code>	Subtraction	Subtracts second expression from first.
<code> </code>	Bitwise OR	Performs a bitwise OR between two expressions.
<code>^</code>	Bitwise XOR	Performs a bitwise exclusive OR between two expressions.

```
1 easy() {
2   return 3 - -3 ** 2 %5; //-1
3 }
4 g_eazy() {
5   return (((1 << 2 | 1) << 2) | 1) << 1; //42
6 }
```

Boolean Operators

These operators take one or two expressions and evaluate to **empty**, 0 or 1. Operators grouped within the same inner box have the same level of precedence and are listed from highest precedence to lowest precedence. All of these operators besides logical negation are infix, left-associative operators. The logical AND and OR operators feature short-circuit evaluation. Logical NOT is a prefix, right-associative operator. Besides logical NOT, all boolean operators have lower precedence than all arithmetic operators. For Strings, the boolean operators `<`, `<=`, `>`, and `>=` implement case-sensitive lexicographic comparison.

Operator	Description	Definition
!	Logical NOT	Evaluates to 0 or 1 given a truthy or falsey value respectively. <code>!empty</code> evaluates to <code>empty</code> . It has equal precedence with <code>and</code> and unary minus.
==	Equals	Always evaluates to 0 if the two expressions have different types. If both expressions are primitive values, evaluates to 1 if they have the same type and the same value, or 0 otherwise. If both expressions are ranges, evaluates to 1 if the two ranges have the same dimensions and each cell of the first expression == the corresponding cell of the second expression. <code>empty == empty</code> evaluates to 1. Strings are compared by value.
!=	Not equals	<code>x != y</code> is equivalent to <code>!(x == y)</code> .
<	Less than	If the expressions are both Numbers or both Strings and the first expression is less than the second, evaluates to 1. If the expressions are both Numbers or both Strings and the first expression is greater than or equal to the second, evaluates to 0. Otherwise, evaluates to <code>empty</code> .
>	Greater than	Equivalent rules about typing as for <.
<=	Less than or equal to	Equivalent rules about typing as for <.
>=	Greater than or equal to	Equivalent rules about typing as for <.
&&	Short-circuit Logical AND	If the first expression is falsey or <code>empty</code> , evaluates to 0 or <code>empty</code> respectively. Otherwise, if the second expression is truthy, falsey, or <code>empty</code> , evaluates to 1, 0, or <code>empty</code> respectively.
	Short-circuit Logical OR	If the first expression is truthy or <code>empty</code> , evaluates to 1 or <code>empty</code> respectively. Otherwise, if the second expression is truthy, falsey, or <code>empty</code> , evaluates to 1, 0, or <code>empty</code> respectively.

```

1 somethings_false() {
2   return !1 != !1 || 4 <= 3;
3 }
4 somethings_empty() {
5   return empty || empty <= !3 || 5 > 3;
6 }
7 somethings_true() {
8   return 6 > 2 && !(1 == !1);
9 }

```

Conditional Expressions

There are two types of conditional expressions: a simple ternary if-then-else expression and a **switch** expression which can represent more complex logic.

Ternary Expressions

A ternary expression, written either as `cond-expr ? expr-if-true : expr-if-false` or, equivalently, `if(cond-expr, expr-if-true, expr-if-false)` evaluates to `expr-if-true` if `cond-expr` is truthy, or `expr-if-false` if `cond-expr` is falsey. If `cond-expr` is empty, the expression evaluates to `empty`. Both `expr-if-true` and `expr-if-false` are mandatory. `expr-if-true` is only evaluated if `cond-expr` is truthy, and `expr-if-false` is only evaluated if `cond-expr` is falsey. If `cond-expr` is empty, neither expression is evaluated. The ternary operator `? :` has the lowest precedence level of all operators.

Switch Expressions

A **switch** expression takes a optional condition, and a list of cases and expressions that the overall expression should evaluate to if the case applies. In the event that multiple cases are true, the expression of the first matching case encountered will be evaluated. An example is provided below:

```
1 switch_example(foo) {
2   return switch (foo) {
3     case 2: "foo is 2";
4     case 3,4: "foo is 3 or 4";
5     default: "none of the above";
6   };
7 }
8
9 alternate_format(foo) {
10  return switch {
11    case foo == 2:
12      "foo is 2";
13    case foo == 3, foo == 4:
14      "foo is 3 or 4";
15    default:
16      "none of the above";
17  };
18 }
```

The format for a **switch** statement is the keyword **switch**, optionally followed by pair of parentheses containing an expression **switch-expr**, followed by a list of case clauses enclosed in curly braces and delimited by semicolons. A case clause consists of the keyword **case** followed by a comma-separated list of expressions **case-expr1** [, **case-expr2**, [...]], a colon, and an expression **match-expr**, or the keyword **default**, a colon, and an expression **default-expr**. If **switch-expr** is omitted, the **switch** expression evaluates to the **match-expr** for the first case where one of the **case-exprs** is truthy, or **default-expr** if none of the **case-exprs** apply. If **switch-expr** is present, the **switch** expression evaluates to the **match-expr** for the first case where one of the **case-exprs** is equal (with equality defined as for the `==` operator) to **switch-expr**, or **default-expr** if none of the **case-exprs** apply.

The **switch** expression can be used to compactly represent what in most imperative languages would require a long string such as `if (cond1) {...} else if (cond2) {...}`. The **switch** operator is internally converted to an equivalent (possibly nested) ternary expression; as a result, it features short-circuit evaluation throughout.

Additional Operators

There are four additional operators available to determine the size and type of other expressions. In addition, the infix `+` operator is overloaded to perform string concatenation.

Operator	Description	Definition
<code>size(expr)</code>	Dimensions	Evaluates to a Range consisting of one row and two columns; the first cell contains the number of rows of <code>expr</code> and the second contains the number of columns. If <code>expr</code> is a Number, a String, or Empty, both cells will contain 1.
<code>typeof(expr)</code>	Value Type	Evaluates to "Number", "String", "Range", or "Empty".
<code>row()</code>	Row Location	No arguments; returns the row of the cell that is being calculated
<code>column()</code>	Column Location	No arguments; returns the column of the cell that is being calculated
<code>+</code>	String concatenation	"Hello, " + "World!\n" == "Hello, World!\n"

Given `[5,5]foo`, then `foo[1,4] = row() * 2 + col()` will evaluate to 6.

Function Calls

A function expression consists of an identifier and an optional list of expressions enclosed in parentheses and separated by commas. The value of the expression is the result of applying the function to the arguments passed in as expressions. The arguments are evaluated from left to right before the function is called. For more detail, see section 3.5.

Range Expressions

Range expressions are used to select part or all of a range. A range expression consists of a bare identifier, a bare range literal, or an expression and a selector. If a range expression has exactly 1 row and 1 column, the value of the expression is the value of the single cell of the range. If it has more than 1 row or more than 1 column, the value of the expression is the selected range. If the range has zero or fewer rows or zero or fewer columns, the value of the expression is `empty`. If a range expression with a selector would access a row index or column index greater than the number of rows or columns of the range, or a negative row or column index, the value of the expression is `empty`.

Slices

A slice consists of an optional integer literal or expression `start`, a colon, and an optional integer literal or expression `end`, or a single integer literal or expression `index`. If `start` is omitted, it defaults to 0. If `end` is omitted, it defaults to the length of the dimension. A single `index` with no colon is equivalent to `index:index+1`. Enclosing `start` or `end` in square brackets is equivalent to the expression `row() + start` or `row() + end`, for a row slice, or `column() + start` or `column() + end` for a column slice. The slice includes `start` and excludes `end`, so the length of a slice is `end - start`. A negative value is interpreted as the length of the dimension minus the value. As mentioned above, the value of a range that is not 1 by 1 is a range, but the value of a 1 by 1 range is essentially dereferenced to the result of the cell formula.

Selections

A selection expression consists of an expression and a pair of slices separated by a comma and enclosed in square brackets, i.e. `[row_slice, column_slice]`. If one of the dimensions of the range has length 1, the comma and the slice for that dimension can be omitted. If the comma is present but a slice is omitted, that slice defaults to `[0]` for a slice corresponding to a dimension of length greater than one, or `0` for a slice corresponding to a dimension of length one.

Corresponding Cell

A very common selection to make is the cell in the "corresponding location" of a different variable. Since this case is so common, `#var` is syntactic sugar for `var[,]`. As a result, if `var` has more than column and more than one row, `#var` is equivalent to `var[row()],column()]`. If `var` has multiple rows and one column, it is equivalent to `var[row(),0]`. If `var` has one row and multiple columns, it is equivalent to `var[0,column()]`; and if `var` has one row and one column, it is equal to `var[0,0]`.

Selection Examples

```
1 selection_examples() {
2   foo[0,2] /* This evaluates to the cell value in the first row and third column. */
3   foo[0,:] /* Evaluates to the range of cells in the first row of foo. */
4   foo[:,2] /* Evaluates to the range of cells in the third column of foo. */
5   foo[:,[1]] /* The internal brackets denote RELATIVE notation.
6   In this case, 1 column right of the column of the left-hand-side cell. */
7
8   foo[3,] /* Equivalent to foo[3,[0]] if foo has more than one column
9   or foo[3,0] if foo has one column */
10
11  foo[5:, 7:] /* All cells starting from the 6th row and 8th column to the bottom
12             right */
13  foo[[1]:[2], 0:[7]]
14  /* Selects the rows between the 1st and 2nd row after LHS row, and
15     all the columns up to the 7th column to the right of the LHS column */
16
17  /* In this example, each cell of bar would be equal to the cell
18     * in foo in the equivalent location plus 1. */
19  [5,5] foo;
20  [5,5] bar := #foo + 1; // #foo = foo[[0],[0]]
21
22  /* In this example, bar would be a 3x5 range where in each row,
23     * the value in bar is equal to the value in foo in the same column.
24     * In other words, each row of bar would be a copy of foo. */
25  [1,5] foo; // foo has 1 row, 5 columns
26  [3,5] bar := #foo; // #foo = foo[0,[0]]
27
28  /* In this example, the values of baz would be
29     * 11, 12, 13 in the first row;
30     * 21, 22, 23 in the second row;
31     * 31, 32, 33 in the third row. */
32  foo := {1,2,3}; // 1 row, 3 columns
33  bar := {10;20;30}; // 3 rows, 1 column
34  [3,3] baz := #foo + #bar; // Equivalent to foo[0,[0]] + bar[[0],0]
35 }
```

Precedence Expressions

A precedence expression is used to force the evaluation of one expression before another, when that order of operation is required for functions with side-effects. It consists of an expression `prec-expr`, the precedence operator `->`, and an expression `succ-expr`. The value of the expression is `succ-expr`, but the value of `prec-expr` will be calculated first and the result ignored. All functions written purely in Extend are free of side effects. However, some of the external functions provided by the standard library, such as for file I/O and plotting, do have side effects. The precedence operator has the second-lowest grammatical precedence of all operators, higher only than the ternary operator.

3.5 Functions

The bulk of an Extend program consists of functions. Although Extend has some features, such as immutability and lazy evaluation, that are inspired by functional languages, its functions are not *first class objects*. By default, the standard library is automatically compiled and linked with a program, but there are no functions built into the language itself.

Format

As in most programming languages, the header of the function declares the parameters it accepts. The body of the function consists of an optional set of variable declarations and formula assignments, which can occur in any order, and a return statement, which must be the last statement in the function body. All variable declarations and formula assignments, in addition to the return statement, must be terminated by a semicolon. This very simple function returns whatever value is passed into it:

```
1  foo(arg) {  
2      return arg;  
3  }
```

Variable Declarations

A variable declaration associates an identifier with a range of cells of the specified dimensions, which are listed in square brackets before the identifier. For convenience, if the square brackets and dimensions are omitted, the identifier will be associated with a single cell. In addition, multiple identifiers, separated by commas, can be listed after the dimensions; all of these identifiers will be separate ranges, but with equal dimension sizes. The dimensions can be specified as any valid expression that evaluates to a Number, which will be rounded to the nearest signed 32-bit integer. If either dimension is zero or negative, or if the expression does not evaluate to a Number, a runtime error causing the program to halt will occur.

```
1  [2, 5] foo; // Declares foo as a range with 2 rows and 5 columns  
2  [m, n] bar; // Declares bar as a range with m rows and n columns  
3  [3, 3] ham, eggs, spam; // Declares ham, eggs and spam as distinct 3x3 ranges  
4  baz; // Declares baz as a single cell
```

Formula Assignment

A formula assignment assigns an expression to a subset of the cells of a variable. Unlike most imperative languages, this expression is not immediately evaluated, but is instead only evaluated if and when it is needed to calculate the return value of the function. A formula assignment consists of an identifier, an optional pair of slices enclosed in square brackets specifying the subset of the cells that the assignment applies to, an `=`, and an expression, followed by a semicolon. As with the expressions specifying the dimensions of a range, these slices specifying the cell subset can contain arbitrary expressions, as long as the expression taken as a

whole evaluates to a Number, which will be rounded to the nearest signed 32-bit integer. Negative numbers are legal in these slices, and correspond to (dimension length + value).

```
1 [5, 2] foo, bar, baz; // Declares foo, bar, and baz as distinct 5x2 ranges
2 foo[0,0] = 42; // Assigns the expression 42 to the first cell of the first row of foo
3 foo[0,1] = foo[0,0] * 2; // Assigns (foo[0,0] * 2) to the 2nd cell of the 1st row of
   foo
4 bar = 3.14159; // Assigns pi to every cell of every row of bar
5 baz[1:-1,0:1] = 2.71828; // Assigns e to cells (1,0) through (3,1), inclusive, of baz
6
7 /* The next line assigns foo[[-1],0] + 2 to every cell in
8    both columns of foo, besides the first row */
9 foo[1:,: ] = foo[[-1],0] + 2;
```

The last line of the source snippet above demonstrates the idiomatic Extend way of simulating an imperative language's loop; `foo[4,0]` would evaluate to $42+2+2+2+2 = 50$ and `foo[4,1]` would evaluate to $(42*2)+2+2+2+2 = 92$.

Combined Variable Declaration and Formula Assignment

For convenience, a variable declaration and a formula assignment to all cells of that variable can be combined on a single line by inserting a `:=` and an expression after the identifier. Multiple variables and assignments, separated by commas, can be declared on a single line as well. All global variables must be defined using the combined declaration and formula assignment syntax.

```
1 /* Creates two 2x2 ranges; every cell of foo evaluates to 1 and every cell of
2    bar evaluates to 2. */
3 [2,2] foo := 1, bar := 2;
```

Formula Assignment Errors

If the developer writes code in such a way that more than one formula applies to a cell, a runtime error will occur if the cell's value is required to compute the return expression. If there is no formula assigned to a cell, the cell will evaluate to `empty`.

Parameter Declarations

Parameters can be declared with or without dimensions. If dimensions are declared, they can either be specified as integer literals or as identifiers. If a dimension is specified as an integer literal, the program will verify the dimension of the argument before beginning to evaluate the return expression; if it does not match, a runtime error will occur causing the program to halt. If it is specified as an identifier, that variable will contain the dimension size and will be available inside the function body. If the same identifier is repeated in the function declaration, the program will verify that every parameter dimension with that identifier has equal dimension size; if they differ, a runtime error will occur causing the program to halt. A few examples follow:

```
1 number_of_cells([m,n] arg) {
2   return m*n; // m and n are initialized with the dimensions of arg
3 }
4
5 die_unless_primitive([1,1] arg) {
6   return 0; // If arg is not a primitive value, a runtime error will occur
7 }
8
9 num_cells_if_column_vector([m,1] arg) {
10  // If arg has one column, return number of cells; otherwise runtime error
```

```

11     return m;
12 }
13
14 die_unless_square([m,m] arg) {
15     return 0; // Runtime error if number of rows != number of columns
16 }
17
18 num_cells_if_same_size([m,n] arg1, [m,n] arg2) {
19     // If arguments are the same size, return # of cells, otherwise runtime error
20     return m*n;
21 }
22
23 main(args) {
24     [3,4] foo;
25     [3,5] bar;
26     return print_endline(num_cells_if_same_size(foo,bar));
27 }

```

Application on Ranges

Extend gives the developer the power to easily apply operations in a functional style on ranges. For example, the following function performs cell wise addition:

```

1 foo([m,n] arg1, [m,n] arg2) {
2     [m,n] bar := #arg1 + #arg2;
3     return bar;
4 }

```

This function normalizes a column vector to have unit norm:

```

1 normalize_column_vector([m,1] arg) {
2     [m,1] squared_lengths := #arg * #arg, normalized := #arg / vector_norm;
3     vector_norm := sqrt(sum(squared_lengths));
4     return normalized;
5 }

```

Lazy Evaluation and Circular References

All cell values and variable dimensions are evaluated lazily if and when they are needed to calculate the return expression. Using lazy evaluation ensures that the cell values are calculated in a valid topological sort order and allows for detection of circular references; internally this is accomplished by constructing a function for each formula which is called the first time the cell's value is needed, and marking the cell as "in-progress" once it starts being evaluated and as "complete" once the value has been calculated. The only guarantees the language places on the order of cell evaluation are: (1) It will be a valid topological ordering; (2) In conditional expressions and in short-circuiting operator expressions, only the relevant conditional branches will be evaluated; and (3) In an expression using the precedence operator, the preceding expression will be evaluated before the succeeding expression. A range selection consisting of multiple cells will not cause the constituent cells to be evaluated; however, selection of a single cell will cause that cell's value to be evaluated. If a program is written in such a way as to cause a circular dependency of one cell on another, and the return expression is dependent on that cell's value, a runtime error will occur. For example, in the following function:

```

1 maybeCircular(truth_value) {
2     x := x;
3     return truth_value ? x : 0;

```

```

4  }
5
6  main(args) {
7      foo :=
8          print_endline("To be or not to be?") ->
9          print_endline("Enter \"Not to be\" to attempt to evaluate a circular reference.")
10         ->
11         readline(STDIN);
12
13     return
14         maybeCircular(foo == "Not to be" || foo == "\"Not to be\"") ->
15         print_endline("Good thing I didn't look at the value of x.");
16 }

```

A runtime error will occur if `maybeCircular(1)` is called; but if `maybeCircular(0)` is called, the function will simply return 0.

External Libraries

Using the following library declaration:

```

1  extern "mylib.o" {
2      foo(arg1, arg2);
3      bar();
4  }

```

will make the functions `foo` (taking two arguments) and `bar` (taking zero arguments) available within `Extend`. In LLVM, the compiler will declare external functions `extend_foo` and `extend_bar` as functions of two and zero arguments respectively. All arguments must have the type `value_p`, and the function must have return type `value_p`, declared in the `Extend` standard library header file. In other words, the C file compiled to generate the library must have defined:

```

1  value_p extend_foo(value_p arg1, value_p arg2) {
2      /* function body here; */
3  }
4
5  value_p extend_bar() {
6      /* function body here; */
7  }

```

3.6 Standard Library Reference

3.7 Example Program

```

1  import "./samples/stdlib.xtnd";
2
3  main([1,n] args) {
4      /* Get a working copy */
5      return 0;
6  }

```

4. Project Plan

4.1 Meetings

Our goals were outlined by weekly meetings. We regularly met with Jacob Graff, our advisor throughout the development of Extend. Jacob served as a sounding board whenever Extend’s fundamental design philosophy was debated, and as a guide as we determined whether we were on track. We used any leftover time on those days to set goals for the upcoming week and pair program if time permitted.

Our team also met weekly on Fridays to further discuss the progression of Extend. In the first half of the semester, the discussions were primarily philosophical, as decisions had to be made about the language grammar and behavior of certain Extend artifacts prior to development. In the second half, time was devoted to ironing out the development timeline, discussing bugs, and making compiler implementation decisions.

4.2 Development Workflow

Github & Travis CI

Our development and documentation were all done entirely through version control to maximize independent productivity. New features were introduced to the master branch through pull requests, and the team used this as a platform to peer review code to maximize code quality before such features entered production.

An important aspect of development for us was continuous integration. Each pull request we made triggered a Travis build, which kept us informed regarding unexpected hiccups that sometimes arose during development. Travis CI ensured that new features were implemented with protecting the code base in mind, and provided quick visibility as to whether a new feature would break the existing build. Any changeset to the master branch must:

1. Pass Travis CI.
2. Be approved by another member of the team.

3. Be up to date with the master branch.

The Interpreter

In our efforts to maximize our effectiveness when building the compiler, we additionally built a working interpreter to test the language semantics and run example Extend programs. This helped us determine language decisions at an earlier stage in the process, and helped us benchmark the success of our compiler by comparing the number of testcases passed by both.

4.3 Team Member Responsibilities

Team Member	Responsibilities	GitHub Profile
Jared Samet	design philosophy, semantic transformations, code generation	oracleofnj
Nigel Schuster	development protocol, code generation, scripting	Neitsch
Ishaan Kolluri	initial LRM, Final Report, regression tests, stdlib functions, scripting	ishaankolluri
Kevin Ye	initial scanner, regression tests, stdlib functions	kevinye1

5. Extend's Internal Architecture

5.1 The Extend Compiler

The Extend compilation process consists of several source files, each of which performs a different function in the compilation pipeline.

- `scanner.mll`: OCamllex scanner - consumes tokens.
- `parser.mly`: OCamllyacc parser - represents the Extend grammar.
- `ast.ml`: Abstract Syntax Tree, created from the output of the parser and representing the structure of an Extend program.
- `transform.ml`: Performs syntactic desugaring for easier compilation.
- `semant.ml`: Analyzes the semantics of the program to ensure that the program adheres to the rules of the language.
- `codegen.ml`: The LLVM IR code generator.
- `linker.ml`: Calls intermediary compilation steps on the generated `.ll`, including external functions if needed.

The Scanner

The function of `scanner.mll` is to parse a text stream into various tokens to be used in an Extend program. Only the tokens that are valid in Extend are to be given to the parser; all others will return a syntax error marked by the line and character number.

The Parser and Abstract Syntax Tree

The parser converts the tokens read by the scanner into a syntax tree deemed acceptable grammar within the Extend Language. This is converted into an Abstract Syntax Tree, which has nodes that can be consumed by the back end of the Extend compiler.

The Transformer

The transformer expands compact statements in the Extend syntax tree into statements with equivalent functionality, but reduced breadth. This step is done to preserve the convenience for the user, but revert the code later into a form that is easier for the compiler to chew on. It's important to note that the amount of transformation here is large; every expression on the left hand side, even if just a single number, gets turned into a variable.

This is how the user declares a variable.

```
1 [2,2] foo;
```

This is how the transformer desugars the same code.

```
1 rows_of_foo := 2;  
2 cols_of_foo := 2;  
3 [rows_of_foo, cols_of_foo] foo;
```

Every expression before or after a comma or colon will become an internal temporary variable in the desugaring process. The transformer also transforms `&&`, `||`, `and` and `switch` into ternary conditionals to enable short-circuiting. Lastly, the transformer performs a small amount of semantic analysis to ensure that there are no duplicate variables within a function, and no duplicate functions within a program.

The Semantic Analyzer

The semantic analyzer ensures that Extend functions, variables, expressions, and more are being used properly at compile time, and throws flavorful exceptions to the user so that they may better understand why their program was illegal. In Extend, there are no real type errors, as we attempt to degrade many gracefully. However, the semantic analyzer ensures that functions exist and have the right number of arguments, and that identifiers refer to real variables within their scope.

The Code Generator

First and foremost, the code generator will validate the program's semantics with `semant.ml`. It also uses `transform.ml` to transform the syntax tree as aforementioned, and generate the appropriate LLVM IR to turn it into a functional program. Instructions to allocate memory, interact with external functions, and platform optimization can be found here.

The Linker

If successful LLVM IR is generated, the linker will adopt the role of building an executable object from the `.ll` file. This includes compiling it to an object file and linking the runtime environment along with other imported libraries.

5.2 Extend Runtime

When a function is called, we declare a scope, and a set of variable instances. Our LLVM `main` function is a call to set up variable definitions, then literals, and then a call to the Extend `main` function. While setting up these variable definitions, we hook up function pointers to the appropriate `..` in the array.

Take three arguments - scope, row, and cell. This lets the function refer to other local variables in that function. The function `getVal` tells us whether we can actually run the function or not.

We generate code for every single variable in every single function.

6. Testing

Due to Extend being a large undertaking, we took steps to ensure that all features were working as the design of the language intended.

This was done through implementing test cases that isolated specific aspects of the Extend language to ensure that each feature worked correctly. For basic components, we wrote a plethora of tests to illustrate functionality. For undertakings that required more debate on the design of the language, other tests were created and modified throughout development.

6.1 Feature Integration & Testing

Development of new features naturally means that they must be deemed legal by the scanner, parser, semantic analyzer, and code generator. As we developed new features, the process was roughly as follows:

1. Write a simple test that illustrated the feature to test.
2. Write the expected output of the aforementioned test to a text file.
3. Confirm that the scanner consumes the tokens related to the feature.
4. Confirm that the parser grammar has been adjusted to accomodate the new feature.
5. Confirm that the semantic analyzer and transformer can properly identify and check the new feature code.
6. Confirm that code generation generates the appropriate LLVM IR for the new features - such as allocating memory, building calls, and more.
7. Ensure that the test written can write its output to `stdout`, to be compared with expected output.
8. Compile and test the code to ensure that the code has worked to the team's expectations.

Earlier in the development process, we tested the front end of our compiler by JSON-ifying the abstract syntax tree, printing it, and examinining it. As we settled into full-fledged development, we would test with a full-feature regression test suite. Later in the semester, JSON-ifying still proved to be useful, as it gave us the option to print debug statements if needed.

6.2 Regression Test Suite

Extend's test suite is executable through the `testscript.sh` script at the top level of the project. There are over 100 integration test files for various features of the Extend language, and a corresponding file with their expected output to `stdout`. This is to ensure that the successful implementation of one feature does not impact that of others.

Regression tests were placed in the `testcases/inputs_regression` directory. Tests that did not pass at the time were placed in the `testcases/inputs` directory. The test script compiles and executes each test, and compares it with the corresponding expected output file, living in the `testcases/expected` directory. Whenever a test passed in `inputs`, it was automatically moved over to `inputs_regression`.

Note: We have added a full test listing at the end of this document. Please refer to the chapter titled "Test Listing" for more detail.

Integration with Travis CI

The aforementioned test suite is run by Travis CI in the event that the Extend compiler is successfully built; otherwise, the build will fail and exit. In our development workflow, checking the logs during build failures sometimes revealed that tests in the regression test suite did not succeed as expected. This integration kept the far-reaching effects of newly introduced features entirely transparent throughout the process.

Using Travis CI allowed us to maintain the working ability of our compiler, as it ensured that every new feature pushed to the master branch would still result in a successful build. This proved to be invaluable when testing the compiler at a macro-level, or providing Jacob, our TA, with up-to-date demonstrations.

7. Extend Code Listing

7.1 scanner.mll

```
1 {
2   open Lexing

9. Git Logs

```
1 1bcb830 2016-12-18T19:48:02-05:00 GitHub: Merge pull request #41 from ExtendLang/
   plotting
2 1cd2360 2016-12-18T19:46:21-05:00 GitHub: Merge branch 'master' into plotting
3 0058659 2016-12-18T19:30:35-05:00 GitHub: Merge pull request #129 from ExtendLang/
   remove-debug-final
4 b54f4aa 2016-12-18T18:54:47-05:00 GitHub: Fix MAXFLOAT
5 9324fb8 2016-12-18T18:50:59-05:00 GitHub: Merge branch 'master' into plotting
6 f152bc9 2016-12-18T18:32:21-05:00 oracleofnj: Remove Debug()
7 c069630 2016-12-18T18:15:40-05:00 Nigel Schuster: Linking plotter is optional
8 e9dbd0f 2016-12-18T17:05:54-05:00 GitHub: Merge pull request #128 from ExtendLang/back
   -to-parsing
9 b602263 2016-12-18T14:12:48-05:00 oracleofnj: Merge in cool program
10 45d14cf 2016-12-18T14:12:28-05:00 GitHub: Merge pull request #127 from ExtendLang/
   strcat-bug
11 790bc51 2016-12-18T14:00:48-05:00 oracleofnj: Merge branch 'cool_program' into back-to
   -parsing
12 2eba5e5 2016-12-18T13:59:44-05:00 oracleofnj: Replace C extend_parseString with in-
   language parseString
13 1b664be 2016-12-18T09:14:51-05:00 Nigel Schuster: Corrected travis file
14 554b584 2016-12-18T09:13:54-05:00 Nigel Schuster: Cleand up Makefile mess
15 a222916 2016-12-18T08:19:54-05:00 GitHub: Merge branch 'master' into plotting
16 d064d8a 2016-12-18T01:49:39-05:00 Ishaan: Cleanup line function
17 47dace5 2016-12-18T01:48:28-05:00 Ishaan: Test single parameter line chart
18 8f5cf52 2016-12-18T01:43:49-05:00 Ishaan: Fix the testcase fail
19 84cd775 2016-12-18T01:41:50-05:00 Ishaan: update testcase
20 a425775 2016-12-18T01:39:43-05:00 Ishaan: Figure out 2 line issue
21 ba2c3c1 2016-12-18T01:34:34-05:00 Ishaan: Add y values and update testcase
22 7ad5986 2016-12-18T01:18:28-05:00 Ishaan: Trying another version of line
23 b8732dd 2016-12-18T00:42:25-05:00 Ishaan: Fix derp in linechart
24 20e2c43 2016-12-18T00:40:22-05:00 Ishaan: Added basic linechart function to examine
25 b404e12 2016-12-17T23:56:16-05:00 Ishaan: Cast to float
26 e866f68 2016-12-17T23:38:40-05:00 Ishaan: Reverse row and col
27 8419510 2016-12-17T23:27:13-05:00 oracleofnj: That's a wrap
28 6ec3e0e 2016-12-17T23:17:46-05:00 oracleofnj: Proof of concept
29 302af00 2016-12-17T23:09:14-05:00 Ishaan: Updating checks
30 7b09def 2016-12-17T23:03:14-05:00 Ishaan: Testing bar chart plotting, will clean up
   later
31 20adaca 2016-12-17T20:40:13-05:00 oracleofnj: Some bugfixes
32 ad69dcf 2016-12-17T20:12:33-05:00 oracleofnj: Fixed extend side
33 8f76e59 2016-12-17T20:10:06-05:00 Kevin: Fixed highest_tsp to take in any number of
   players
34 0707084 2016-12-17T19:53:58-05:00 oracleofnj: Isolating
35 4479213 2016-12-17T19:47:38-05:00 oracleofnj: much longer
36 4be857f 2016-12-17T19:41:59-05:00 oracleofnj: seg fault
```

```

37 74358c1 2016-12-17T19:34:18-05:00 Kevin: Interesting program in Extend
38 ab1e1d2 2016-12-17T16:12:00-05:00 oracleofnj: Add some more stdlib funcs
39 b53463d 2016-12-17T14:51:24-05:00 GitHub: Merge pull request #125 from ExtendLang/
    stdlib-string
40 39046bc 2016-12-17T14:39:54-05:00 oracleofnj: Merge branch 'master' into stdlib-string
41 a01cc84 2016-12-17T14:39:40-05:00 oracleofnj: Use toString in toLiteral
42 ec7f10d 2016-12-17T14:38:30-05:00 GitHub: Merge pull request #102 from ExtendLang/
    circular-hotfix
43 73c454b 2016-12-17T14:34:42-05:00 GitHub: Merge branch 'master' into circular-hotfix
44 8126e2e 2016-12-17T14:24:22-05:00 oracleofnj: native toString
45 037728d 2016-12-17T13:46:34-05:00 Nigel Schuster: A lot of wrong paths make it work
46 0a4fd9d 2016-12-17T13:26:34-05:00 Nigel Schuster: Next attempt
47 56905f8 2016-12-17T13:19:59-05:00 Nigel Schuster: Merge branch 'plotting' of https://
    github.com/ExtendLang/Extend into plotting
48 fbf3a1e 2016-12-17T13:19:52-05:00 Nigel Schuster: Manual install (maybe?)
49 1171b71 2016-12-17T13:10:19-05:00 GitHub: Merge branch 'master' into plotting
50 0dbf85d 2016-12-17T13:07:56-05:00 Nigel Schuster: Added libgd for travis
51 060ae45 2016-12-17T13:01:35-05:00 oracleofnj: Merge branch 'master' into stdlib-string
52 4402208 2016-12-17T13:01:24-05:00 oracleofnj: Add round
53 23c2ae6 2016-12-17T13:00:05-05:00 GitHub: Merge pull request #123 from ExtendLang/size
    -asserts
54 0ef936b 2016-12-17T12:33:31-05:00 oracleofnj: Fix merge conflicts
55 4c51203 2016-12-17T11:59:30-05:00 oracleofnj: Right confusion
56 c05cf61 2016-12-17T11:52:34-05:00 oracleofnj: Fix import dir bug
57 39edbb4 2016-12-17T11:46:06-05:00 oracleofnj: Merge branch 'master' into size-asserts
58 339cb1f 2016-12-17T11:45:54-05:00 oracleofnj: Fix merge conflict
59 7462381 2016-12-17T11:44:50-05:00 GitHub: Merge pull request #122 from ExtendLang/
    split-stdlib
60 61ac8f2 2016-12-17T11:38:19-05:00 oracleofnj: Size asserts
61 606af9f 2016-12-17T11:22:36-05:00 oracleofnj: Transform asserts into more useful form;
    add calc of assert value to codegen
62 8743e4c 2016-12-17T11:07:31-05:00 Nigel Schuster: Explicit maxfloat
63 0f96e70 2016-12-17T11:02:09-05:00 Nigel Schuster: merge master; Keep tc around for
    testing
64 1882524 2016-12-17T10:54:10-05:00 Nigel Schuster: Creating archive
65 ee4f369 2016-12-17T10:40:17-05:00 oracleofnj: Combine asserts into a single expression
66 0f0f1c8 2016-12-17T10:38:56-05:00 Nigel Schuster: Added right and left to stdlib
67 4dc1597 2016-12-17T10:35:11-05:00 Nigel Schuster: Made compiling workable
68 fa43425 2016-12-17T10:30:23-05:00 oracleofnj: Split stdlib
69 824c53c 2016-12-17T10:11:13-05:00 Nigel Schuster: Added toUpper and toLower
70 ec24177 2016-12-17T10:02:30-05:00 Nigel Schuster: Implemented to and from ASCII
71 ab2e8f8 2016-12-17T09:15:39-05:00 GitHub: Merge pull request #116 from ExtendLang/line
    -plus
72 5d1610b 2016-12-17T09:08:57-05:00 GitHub: Merge branch 'master' into line-plus
73 df3a827 2016-12-17T09:08:48-05:00 GitHub: Merge pull request #117 from ExtendLang/cmd-
    args
74 32a3487 2016-12-17T09:02:27-05:00 GitHub: Merge branch 'master' into cmd-args
75 a8f9d33 2016-12-17T09:00:23-05:00 Nigel Schuster: Args
76 bfccf0c 2016-12-17T08:58:08-05:00 Nigel Schuster: Cut down line count for plus
77 a6bc89a 2016-12-17T08:48:31-05:00 GitHub: Merge pull request #114 from ExtendLang/only
    -new-string
78 5c96b7f 2016-12-17T08:03:27-05:00 GitHub: Merge pull request #109 from ExtendLang/unop
    -bitnot
79 3834210 2016-12-17T00:33:37-05:00 oracleofnj: Get rid of box string in favor of
    new_string_all_the_way, renamed new_string
80 375bea7 2016-12-16T23:56:35-05:00 oracleofnj: Merge branch 'unop-bitnot' into remove-

```

```

    interpreter
81  fb1bd77 2016-12-16T23:54:43-05:00 oracleofnj: Clean up; remove interpreter; change
    DimInt to DimOneByOne
82  539dd75 2016-12-16T23:46:35-05:00 GitHub: Merge branch 'master' into unop-bitnot
83  5668e53 2016-12-16T23:43:57-05:00 Nigel Schuster: Using lrint instead of fptosi
84  45691eb 2016-12-16T23:35:38-05:00 GitHub: Merge pull request #111 from ExtendLang/
    global-semant
85  2cdfb8b 2016-12-16T23:33:26-05:00 GitHub: Merge branch 'master' into global-semant
86  c9500d9 2016-12-16T23:33:14-05:00 GitHub: Merge pull request #112 from ExtendLang/
    remove-function-signatures
87  0c24f54 2016-12-16T23:25:23-05:00 oracleofnj: Remove return signature from grammar and
    all test cases
88  e7f2864 2016-12-16T23:03:53-05:00 oracleofnj: Merge branch 'cleanup-1' into global-
    semant
89  567507e 2016-12-16T22:53:20-05:00 oracleofnj: Check globals; use same symbol_table
    function for semant and codegen
90  33e3942 2016-12-16T22:11:13-05:00 GitHub: Merge branch 'master' into plotting
91  55d8185 2016-12-16T22:00:30-05:00 Nigel Schuster: Removed comments and unnecessary
    files
92  629042f 2016-12-16T21:37:07-05:00 GitHub: Merge branch 'master' into unop-bitnot
93  48b139a 2016-12-16T21:34:09-05:00 Nigel Schuster: Implemented unary bitnot
94  39b02cd 2016-12-16T21:27:22-05:00 oracleofnj: Merge branch 'master' into global-semant
95  28c0983 2016-12-16T21:27:05-05:00 oracleofnj: Remove leftover printf
96  dc182df 2016-12-16T21:09:00-05:00 GitHub: Merge pull request #105 from ExtendLang/rg-
    eq
97  8cdf5c4 2016-12-16T19:31:26-05:00 oracleofnj: Expand test cases for range equality
98  41a3ccc 2016-12-16T19:18:44-05:00 GitHub: Merge branch 'master' into rg-eq
99  8dbebc1 2016-12-16T19:18:15-05:00 GitHub: Merge pull request #104 from ExtendLang/
    prevent-overlapping-formulas
100 c1431b5 2016-12-16T18:55:07-05:00 Nigel Schuster: Implemented basic subrange
    comparison
101 546536e 2016-12-16T18:47:12-05:00 oracleofnj: Detect overlapping formulas and give
    runtime error if present
102 3562e1b 2016-12-16T18:45:12-05:00 oracleofnj: Merge branch 'sr-val-fix' into prevent-
    overlapping-formulas
103 8713fa0 2016-12-16T18:42:40-05:00 oracleofnj: Checking
104 77d80b9 2016-12-16T18:26:31-05:00 Nigel Schuster: Fixed check for subrange
105 69fb0d2 2016-12-16T17:46:48-05:00 oracleofnj: Circular hotfix
106 4a3ec8d 2016-12-16T17:21:18-05:00 oracleofnj: Add concat
107 962c744 2016-12-16T12:09:00-05:00 GitHub: Merge pull request #101 from ExtendLang/
    finishing-these-range-literals
108 f234e00 2016-12-16T00:21:06-05:00 oracleofnj: Merge branch 'more-stdlib-functions'
    into finishing-these-range-literals
109 c9246ce 2016-12-16T00:20:59-05:00 oracleofnj: testing testing
110 6914039 2016-12-16T00:14:09-05:00 oracleofnj: Third time's the charm
111 4617e44 2016-12-16T00:01:12-05:00 oracleofnj: It compiles now
112 1d8e290 2016-12-15T23:42:43-05:00 oracleofnj: Fingers crossed
113 c9d28d3 2016-12-15T21:50:01-05:00 oracleofnj: Move all initializations into their own
    function; only box strings once
114 1cfdd16 2016-12-15T18:47:30-05:00 oracleofnj: Merge branch 'master' into more-stdlib-
    functions
115 19c2beb 2016-12-15T18:40:12-05:00 oracleofnj: Try a couple more things out
116 845cb04 2016-12-15T18:33:07-05:00 GitHub: Merge pull request #96 from ExtendLang/
    ternary-fix
117 4bfb3bc 2016-12-15T18:23:00-05:00 oracleofnj: Merge branch 'ternary-fix' into more-
    stdlib-functions

```

```

118 ae55ca4 2016-12-15T18:21:58-05:00 oracleofnj: Define cell_row, cell_col
119 30a5db6 2016-12-15T18:19:56-05:00 oracleofnj: Merge branch 'ternary-fix' into more-
      stdlib-functions
120 b9f1f10 2016-12-15T18:17:53-05:00 oracleofnj: What is truth?
121 ac84c2f 2016-12-15T18:15:37-05:00 oracleofnj: Fix ternary to work properly with ranges
122 1f57d91 2016-12-15T17:03:26-05:00 oracleofnj: Look at this one
123 437ba46 2016-12-15T16:56:04-05:00 oracleofnj: Try this one
124 f0edf5b 2016-12-15T16:46:52-05:00 oracleofnj: Fixing bug
125 5ba31e6 2016-12-15T14:17:52-05:00 GitHub: Merge pull request #94 from ExtendLang/nan-
      inf
126 67c5739 2016-12-15T14:17:46-05:00 GitHub: Merge pull request #93 from ExtendLang/type-
      typeof
127 48a3d5c 2016-12-15T14:05:37-05:00 oracleofnj: Improve test case
128 8f08227 2016-12-15T13:58:46-05:00 oracleofnj: Add isNaN and isInfinite to stdlib
129 cbeec74 2016-12-15T13:30:31-05:00 oracleofnj: Rename token
130 9582228 2016-12-15T13:18:09-05:00 oracleofnj: Rename type to typeof
131 d1422c7 2016-12-15T10:42:19-05:00 GitHub: Merge pull request #92 from ExtendLang/
      compiler
132 66689bb 2016-12-15T09:08:56-05:00 Nigel Schuster: added working directory option,
      doing testing completely in tmp
133 a13ae93 2016-12-15T09:08:31-05:00 GitHub: Merge pull request #91 from ExtendLang/
      sizeof
134 a31add9 2016-12-15T09:08:13-05:00 GitHub: Merge pull request #90 from ExtendLang/
      subselect-C-side
135 2e67e06 2016-12-15T09:01:06-05:00 Nigel Schuster: Added option to specify compiler,
      using clang
136 c171450 2016-12-15T02:33:48-05:00 oracleofnj: SizeOf
137 c168044 2016-12-15T00:48:35-05:00 oracleofnj: Add row(), column() to codegen, add
      print_endline() to stdlib.xtnd
138 bf9426d 2016-12-15T00:27:13-05:00 oracleofnj: Print subrange
139 407ce41 2016-12-14T23:02:02-05:00 oracleofnj: Merge in subrange_string
140 756ea8e 2016-12-14T22:51:00-05:00 oracleofnj: Ranges
141 27a8e79 2016-12-14T22:16:13-05:00 oracleofnj: Resolve RHS slice
142 876d056 2016-12-14T22:02:56-05:00 oracleofnj: Resolve RHS index
143 b59e022 2016-12-14T21:46:00-05:00 Nigel Schuster: Added method to print subrange as
      string
144 a7d53a8 2016-12-14T19:55:38-05:00 oracleofnj: Merge branch 'master' into subselect-C-
      side
145 362e85b 2016-12-14T19:55:23-05:00 GitHub: Merge pull request #88 from ExtendLang/
      subselect
146 4912fa3 2016-12-14T19:40:10-05:00 oracleofnj: Add debug print info for slice
      structures
147 c1b33f4 2016-12-14T18:58:45-05:00 oracleofnj: Builder to end all builders
148 5d400c2 2016-12-14T18:55:06-05:00 oracleofnj: Add selection builders
149 29f6e28 2016-12-14T18:20:51-05:00 oracleofnj: Make additional infix operator for
      populating structure element
150 046d096 2016-12-14T17:49:19-05:00 oracleofnj: Set up RHS slice types
151 0d20933 2016-12-14T17:28:38-05:00 GitHub: Merge branch 'master' into plotting
152 614d84f 2016-12-14T17:25:20-05:00 Nigel Schuster: Dummy commit for travis
153 0e78574 2016-12-14T17:24:04-05:00 Nigel Schuster: Merge branch 'plotting' of https://
      github.com/ExtendLang/Extend into plotting
154 2da0d7d 2016-12-14T17:23:56-05:00 Nigel Schuster: Spelling fix
155 b25c2f5 2016-12-14T16:49:17-05:00 GitHub: Merge pull request #87 from ExtendLang/make-
      a-selection
156 7a12082 2016-12-14T16:43:38-05:00 oracleofnj: Move selection test cases back into
      inputs

```

```

157 e2c08d5 2016-12-14T16:31:00-05:00 oracleofnj: Make IDs work with deref_subrange
158 02f2f0c 2016-12-14T15:21:31-05:00 GitHub: Merge pull request #86 from ExtendLang/
    include-stdlib
159 8b0503f 2016-12-14T15:18:14-05:00 GitHub: Merge branch 'master' into include-stdlib
160 1f034a0 2016-12-14T15:17:52-05:00 GitHub: Merge pull request #84 from ExtendLang/math-
    linker
161 1e6dd91 2016-12-14T14:58:44-05:00 oracleofnj: Add expected output for slurp
162 ff1a5e3 2016-12-14T14:53:38-05:00 oracleofnj: Remove extend_ prefix from all sample
    code
163 81a2828 2016-12-14T14:48:38-05:00 oracleofnj: Automatically add extend_ prefix to
    external functions
164 dccled3 2016-12-14T14:30:52-05:00 oracleofnj: Fix samples
165 9b2c28f 2016-12-14T12:39:45-05:00 oracleofnj: Include stdlib automatically
166 13650ce 2016-12-14T12:35:21-05:00 Nigel Schuster: Merge branch 'math-linker' of https
    ://github.com/ExtendLang/Extend into math-linker
167 2e0d90d 2016-12-14T12:35:06-05:00 Nigel Schuster: Merge branch 'math-linker' of https
    ://github.com/ExtendLang/Extend into math-linker
168 83c689e 2016-12-14T12:34:14-05:00 Nigel Schuster: Merge branch 'math-linker' of https
    ://github.com/ExtendLang/Extend into math-linker
169 127f600 2016-12-14T12:34:07-05:00 Nigel Schuster: Include sys/resources
170 b34d97a 2016-12-14T12:03:44-05:00 GitHub: Merge branch 'master' into math-linker
171 8297f33 2016-12-14T12:01:47-05:00 GitHub: Merge pull request #85 from ExtendLang/put-
    lt-back
172 6b0c74f 2016-12-14T11:33:45-05:00 Nigel Schuster: Include sys/resources
173 37470e9 2016-12-14T11:14:06-05:00 oracleofnj: Put back LT, comment out sys/time.h
174 6bde590 2016-12-14T11:12:16-05:00 Nigel Schuster: Increasing stack size
175 6acc621 2016-12-14T11:03:31-05:00 Nigel Schuster: Disabled linking math when creating
    an intermediate
176 d87b73c 2016-12-14T10:51:58-05:00 GitHub: Merge pull request #82 from ExtendLang/hard-
    to-repro-bug
177 d126e3c 2016-12-14T00:51:00-05:00 oracleofnj: Try with time.h instead of sys/time.h
178 a535612 2016-12-14T00:48:35-05:00 oracleofnj: Remove lrints
179 e844853 2016-12-14T00:34:37-05:00 oracleofnj: Initialize all variables and remove
    pointer math; bug appears fixed
180 4c1a421 2016-12-13T22:55:07-05:00 oracleofnj: Some formula is weird
181 5dbd409 2016-12-13T22:43:19-05:00 oracleofnj: Merge branch 'hard-to-repro-bug' of
    https://github.com/ExtendLang/Extend into hard-to-repro-bug
182 879eaf3 2016-12-13T22:43:17-05:00 oracleofnj: Testing
183 37f5ce2 2016-12-13T22:42:40-05:00 GitHub: Merge pull request #83 from ExtendLang/
    rounding-for-read
184 a1cfc5a 2016-12-13T22:34:21-05:00 Nigel Schuster: Added rounding at several places
185 e20f7e4 2016-12-13T21:36:13-05:00 oracleofnj: Half the time it works
186 9f97b1a 2016-12-13T20:38:08-05:00 GitHub: Merge branch 'master' into plotting
187 61bc9b6 2016-12-13T20:33:27-05:00 GitHub: Merge pull request #81 from ExtendLang/fix-
    em-all
188 4a810df 2016-12-13T19:34:29-05:00 Nigel Schuster: Corrected testcase outputs
189 ae5b8a8 2016-12-13T19:08:43-05:00 GitHub: Merge pull request #80 from ExtendLang/
    select
190 70b2704 2016-12-13T19:02:32-05:00 oracleofnj: No C99
191 15fd762 2016-12-13T18:42:21-05:00 oracleofnj: Merge branch 'master' into select
192 8e6e9ba 2016-12-13T18:42:05-05:00 GitHub: Merge pull request #78 from ExtendLang/unop-
    unary-minus
193 7a93885 2016-12-13T18:41:49-05:00 oracleofnj: Calculate all formula indices
194 07e63dc 2016-12-13T18:19:58-05:00 oracleofnj: Properly build instantiate var
195 1a29129 2016-12-13T17:24:16-05:00 oracleofnj: Replace bools with chars for
    compatibility between C and LLVM

```

196 12e78a3 2016-12-13T17:17:54-05:00 oracleofnj: Added debug output
197 a483282 2016-12-13T16:13:30-05:00 oracleofnj: Merge branch 'master' into unop-unary-minus
198 f8c9b43 2016-12-13T16:13:09-05:00 oracleofnj: Make TypeOf work
199 8146d04 2016-12-13T16:12:17-05:00 GitHub: Merge pull request #75 from ExtendLang/fix-more-tc
200 94afc93 2016-12-13T16:02:35-05:00 Nigel Schuster: Corrected expected TC
201 f6f8276 2016-12-13T16:00:59-05:00 Nigel Schuster: Fixed string.xtnd file
202 dcd5766 2016-12-13T15:44:38-05:00 GitHub: Merge pull request #74 from ExtendLang/fix-tc
203 bfe1c07 2016-12-13T15:39:45-05:00 oracleofnj: Merge branch 'master' into unop-unary-minus
204 d9abfc0 2016-12-13T15:38:38-05:00 GitHub: Merge branch 'master' into fix-tc
205 50ed49c 2016-12-13T15:38:04-05:00 oracleofnj: Merging in main
206 23328f1 2016-12-13T15:37:18-05:00 GitHub: Merge pull request #73 from ExtendLang/and-or-xor
207 324779a 2016-12-13T15:32:26-05:00 Nigel Schuster: Corrected expected value
208 fafe2e6 2016-12-13T15:29:21-05:00 Nigel Schuster: Fixed string tc
209 022f05c 2016-12-13T15:23:59-05:00 Nigel Schuster: Fixed testcase
210 b12fe37 2016-12-13T15:18:57-05:00 Nigel Schuster: Implemented and, or and xor
211 90cbaa0 2016-12-13T15:16:31-05:00 Nigel Schuster: Added left and right shift
212 571ee7e 2016-12-13T14:56:05-05:00 Nigel Schuster: Merge branch 'power' of https://github.com/ExtendLang/Extend into power
213 aeab40d 2016-12-13T14:55:57-05:00 Nigel Schuster: Removed unnecessary level of indirection
214 e377567 2016-12-13T14:53:28-05:00 GitHub: Merge branch 'master' into power
215 6ad8512 2016-12-13T14:53:11-05:00 GitHub: Merge pull request #69 from ExtendLang/unop-unary-minus
216 71f395d 2016-12-13T14:46:27-05:00 Nigel Schuster: Power to the people of Extend
217 6a04209 2016-12-13T14:45:46-05:00 oracleofnj: Fix merge conflict
218 edb0ecc 2016-12-13T14:43:32-05:00 oracleofnj: Add unary minus
219 668a0eb 2016-12-13T14:37:19-05:00 GitHub: Merge pull request #68 from ExtendLang/mod-div
220 866b68f 2016-12-13T14:32:18-05:00 Nigel Schuster: Added modulo and division operation
221 46d5aa6 2016-12-13T14:26:35-05:00 oracleofnj: Merge branch 'master' into unop-typeof
222 84dfc33 2016-12-13T14:26:25-05:00 Nigel Schuster: Crunched some code
223 76210eb 2016-12-13T14:26:18-05:00 oracleofnj: Start on it
224 f4d5a81 2016-12-13T14:22:12-05:00 Nigel Schuster: Merge branch 'master' into simplification
225 f873242 2016-12-13T14:21:26-05:00 GitHub: Merge pull request #65 from ExtendLang/subtraction
226 fc94112 2016-12-13T14:20:35-05:00 Nigel Schuster: Added multiplication
227 6c26c2c 2016-12-13T14:19:07-05:00 GitHub: Merge branch 'master' into subtraction
228 4afd78e 2016-12-13T14:18:55-05:00 GitHub: Merge pull request #64 from ExtendLang/refactor-boolean-binops
229 d4d4388 2016-12-13T14:15:58-05:00 GitHub: Merge branch 'master' into refactor-boolean-binops
230 bd90241 2016-12-13T14:14:17-05:00 GitHub: Merge branch 'master' into subtraction
231 4042259 2016-12-13T14:13:09-05:00 Nigel Schuster: Added subtraction
232 663f399 2016-12-13T14:12:57-05:00 oracleofnj: Remove wildcard from BinOp pattern match
233 82a3db2 2016-12-13T14:11:31-05:00 Nigel Schuster: Merge branch 'master' into subtraction
234 1bf6bed 2016-12-13T14:09:47-05:00 oracleofnj: Add TransformedAway exception for LogAnd and LogOr
235 c7d4162 2016-12-13T14:02:13-05:00 GitHub: Merge pull request #63 from ExtendLang/more-binops

236 952778e 2016-12-13T14:01:54-05:00 oracleofnj: Change Lt, Lte in grammar; implement GTE
 237 97821c8 2016-12-13T13:47:52-05:00 oracleofnj: GT
 238 1e1f973 2016-12-13T13:44:36-05:00 Nigel Schuster: Subtraction
 239 e0a883a 2016-12-13T13:37:57-05:00 oracleofnj: Remove NotEq from AST since != is parsed
 to UnOp(LogNot, BinOp(Eq, ...))
 240 cc40008 2016-12-13T12:49:33-05:00 GitHub: Merge pull request #60 from ExtendLang/
 addition2

308 0ad195e 2016-12-11T12:42:42-05:00 oracleofnj: Merge branch 'master' into encapsulate-
    build-scope
309 9caf464 2016-12-11T12:41:40-05:00 oracleofnj: Encapsulate a little more of building
    the scope
310 1ae8d43 2016-12-11T12:23:04-05:00 Ishaan: Add new gitignore
311 6278c7b 2016-12-11T12:18:49-05:00 Ishaan: Rebase and add gdchart in lib/
312 5594687 2016-12-11T12:13:20-05:00 Ishaan: Remove images from version control
313 294a6db 2016-12-11T12:13:20-05:00 Ishaan: Write to file instead of stdout
314 08e9f75 2016-12-11T12:11:13-05:00 Ishaan: Add hardcoded graph functionality
315 d65aad4 2016-12-11T12:09:28-05:00 GitHub: Merge pull request #40 from ExtendLang/make-
    global-scope
316 b5b33f1 2016-12-11T12:09:12-05:00 Ishaan: Update gitignore to avoid the gdchart
    package
317 6746e8a 2016-12-11T12:09:12-05:00 Ishaan: Checking gif

```

318 83c2e09 2016-12-11T12:09:12-05:00 Ishaan: Add hardcoded plot function without params
 or installation
 319 0f5a6ba 2016-12-11T12:04:05-05:00 oracleofnj: Merge branch 'master' into make-global-
 scope
 320 56b58d9 2016-12-11T12:01:28-05:00 oracleofnj: Encapsulate build_var_defns
 321 f25e5b3 2016-12-11T11:43:19-05:00 oracleofnj: Only construct var_defns once
 322 9cee2fc 2016-12-11T10:07:36-05:00 Nigel Schuster: Testcases (#38)
 323 f3f4bef 2016-12-11T00:45:44-05:00 oracleofnj: Make global variable to hold vardefns
 324 a0ed757 2016-12-10T23:31:38-05:00 Nigel Schuster: Edited explanation for row() and
 column()
 325 7c50ef2 2016-12-10T23:27:07-05:00 Nigel Schuster: Added info for strings
 326 738e41b 2016-12-10T23:24:20-05:00 Nigel Schuster: Added boolean example
 327 5377fdf 2016-12-10T23:19:26-05:00 Nigel Schuster: Added arithmetic example
 328 a8f4ad9 2016-12-10T21:28:18-05:00 oracleofnj: Isolate the part of building a scope for
 reuse with global variables
 329 58f7a4d 2016-12-10T18:05:01-05:00 Nigel Schuster: Performing copy before returning, so
 that memory can be freed with alloca
 330 c0e56aa 2016-12-10T17:07:00-05:00 GitHub: Merge pull request #37 from ExtendLang/
 dereference
 331 a4b35df 2016-12-10T16:42:17-05:00 Nigel Schuster: Removed obsolete methods
 332 cf08a8c 2016-12-10T16:36:20-05:00 GitHub: Merge branch 'master' into dereference
 333 ef0e5e7 2016-12-10T16:36:03-05:00 GitHub: Merge pull request #36 from ExtendLang/comp-
 warn
 334 0177dc2 2016-12-10T16:35:50-05:00 GitHub: Merge pull request #35 from ExtendLang/
 linker
 335 127f99d 2016-12-10T16:35:41-05:00 GitHub: Merge pull request #34 from ExtendLang/rel-
 import
 336 b2e881d 2016-12-10T16:35:31-05:00 GitHub: Merge pull request #33 from ExtendLang/ts-
 fix
 337 ce833d4 2016-12-10T16:14:34-05:00 Nigel Schuster: Dereferencing 1x1 subrange
 338 e259556 2016-12-10T13:53:12-05:00 Nigel Schuster: Removed nodefaultlibs directive
 339 09c3961 2016-12-10T13:50:19-05:00 Nigel Schuster: Modified linker to work for travis
 340 36d662a 2016-12-10T13:37:27-05:00 Nigel Schuster: Attempt to link math
 341 2d4564a 2016-12-10T13:22:14-05:00 Nigel Schuster: Linking math library
 342 38ba6e6 2016-12-10T13:18:39-05:00 Nigel Schuster: Suppressing compiler warnings
 343 9deac9b 2016-12-10T13:06:39-05:00 Nigel Schuster: Modified compile script. Removed
 debug output
 344 d35607b 2016-12-10T13:04:30-05:00 Nigel Schuster: Simpler testscript
 345 d37dac2 2016-12-10T12:36:45-05:00 Nigel Schuster: Fixed duplicate import issue
 346 31c26bc 2016-12-10T12:30:29-05:00 Nigel Schuster: Added cmd args to link file
 347 a350720 2016-12-10T11:40:50-05:00 Nigel Schuster: Switched import style from root
 directory to relative path
 348 90e39b0 2016-12-10T11:24:19-05:00 Nigel Schuster: Fixed issue in testscript that might
 report false results when it fails early
 349 718ecd3 2016-12-10T03:09:18-05:00 oracleofnj: Some changes to LRM; add if(a,b,c)
 350 6a8f836 2016-12-09T18:29:22-05:00 GitHub: Merge pull request #24 from ExtendLang/final
 -draft-lrm
 351 fc886a9 2016-12-09T18:23:52-05:00 oracleofnj: Merge branch 'final-draft-lrm'
 352 cda63cb 2016-12-09T18:23:24-05:00 oracleofnj: Fix merge conflict
 353 eac9e77 2016-12-09T18:04:08-05:00 GitHub: Merge pull request #29 from ExtendLang/
 refactor
 354 fe825f4 2016-12-09T17:55:39-05:00 oracleofnj: Compact last bit
 355 b02dbbe 2016-12-09T17:49:00-05:00 oracleofnj: Give formula functions names
 356 edd7aa4 2016-12-09T17:40:57-05:00 Nigel Schuster: Removed artificats
 357 9b49e20 2016-12-09T17:37:59-05:00 Nigel Schuster: Fixed I/O testcases
 358 a4ad4b1 2016-12-09T17:18:13-05:00 Nigel Schuster: Merge

```

359 b07398b 2016-12-09T17:17:19-05:00 Nigel Schuster: Added macro for function definition
360 ed01567 2016-12-09T17:17:06-05:00 oracleofnj: Make sizeof not break tests
361 a0a7054 2016-12-09T17:01:20-05:00 oracleofnj: Use symbol table
362 56fd61b 2016-12-09T16:11:10-05:00 oracleofnj: Merge branch 'refactor' of https://
    github.com/ExtendLang/Extend into refactor
363 38aedba 2016-12-09T16:10:35-05:00 oracleofnj: Create symbol table
364 dfb702e 2016-12-09T16:01:08-05:00 Nigel Schuster: Converted more to value_p from
    subrange_p
365 e963186 2016-12-09T15:42:35-05:00 Nigel Schuster: Made example TC work
366 eb76234 2016-12-09T11:14:58-05:00 Nigel Schuster: Made Hello World work again
367 08aeb70 2016-12-09T02:13:09-05:00 oracleofnj: Done for the night
368 cb39114 2016-12-09T01:35:36-05:00 oracleofnj: More refactoring
369 7974bbd 2016-12-08T23:53:31-05:00 oracleofnj: Banish the term extern
370 49af972 2016-12-08T23:45:30-05:00 oracleofnj: Add a couple comments
371 0fbf461 2016-12-08T21:52:24-05:00 oracleofnj: Get my bearings
372 5ecb599 2016-12-08T19:47:51-05:00 Nigel Schuster: Added some documentation
373 65066fc 2016-12-08T12:18:57-05:00 Nigel Schuster: Added name display for variable
374 fb18949 2016-12-07T23:44:17-05:00 oracleofnj: Merge branch 'master' into final-draft-
    lrm
375 4aab3dc 2016-12-07T23:43:25-05:00 oracleofnj: Update PDF
376 ed44d27 2016-12-07T23:43:01-05:00 oracleofnj: Fix failing test cases
377 9354fa7 2016-12-07T23:06:36-05:00 oracleofnj: Final draft candidate
378 78649f4 2016-12-07T18:09:46-05:00 oracleofnj: Almost done
379 05ded19 2016-12-07T15:47:52-05:00 oracleofnj: More work
380 f985cc8 2016-12-07T12:14:59-05:00 Nigel Schuster: Merge branch 'finish-transformations
    ' into get-val-rev
381 4b58ce9 2016-12-07T12:13:23-05:00 Nigel Schuster: Tried to add more instructions
382 0722412 2016-12-07T11:32:11-05:00 oracleofnj: Working
383 099efe7 2016-12-07T10:48:35-05:00 Nigel Schuster: Making progress on evaluating
    dimensions
384 fa09df7 2016-12-07T09:51:23-05:00 Nigel Schuster: Finally it works
385 cbb0577 2016-12-07T02:35:06-05:00 oracleofnj: Still WIP
386 e3c9436 2016-12-07T00:44:22-05:00 oracleofnj: WIP
387 b265e74 2016-12-07T00:41:23-05:00 Nigel Schuster: test commit to look at
388 18bb182 2016-12-07T00:35:06-05:00 oracleofnj: Still work in progress
389 a4554c0 2016-12-06T23:14:32-05:00 Nigel Schuster: At least it compiles
390 3432484 2016-12-06T22:42:22-05:00 Nigel Schuster: Getting closer. Need to add var_defn
    wrapper in build_formula
391 05145ca 2016-12-06T21:10:11-05:00 Nigel Schuster: Minor fix
392 af69b92 2016-12-06T17:23:45-05:00 oracleofnj: More updates
393 a65c24e 2016-12-06T16:14:10-05:00 oracleofnj: Merge branch 'master' into finish-
    transformations
394 85a4ccb 2016-12-06T16:12:31-05:00 oracleofnj: LRM update part 1
395 174a7b8 2016-12-06T11:09:31-05:00 Nigel Schuster: Made partial progress on
    implementing variable instantiation and such
396 90fc58e 2016-12-05T22:14:41-05:00 GitHub: Merge pull request #23 from ExtendLang/read-
    empty
397 767851d 2016-12-05T16:18:17-05:00 Nigel Schuster: Finished C side implementation of
    getVal
398 6b837d4 2016-12-05T16:06:34-05:00 Nigel Schuster: Merge branch 'master' into get-val
399 04c2c65 2016-12-05T15:53:35-05:00 oracleofnj: Add slurp by passing 0 max bytes
400 d8cf316 2016-12-05T14:46:46-05:00 oracleofnj: Start handling empty
401 910bd01 2016-12-05T14:27:07-05:00 GitHub: Merge pull request #21 from ExtendLang/
    fileio
402 1ce7f83 2016-12-05T14:18:41-05:00 oracleofnj: Create patch file
403 88480fb 2016-12-05T13:36:28-05:00 GitHub: Merge branch 'master' into fileio

```

```

404 29d02d9 2016-12-05T13:34:27-05:00 oracleofnj: Fix merge conflict - keep expr_loc
405 52e7a8a 2016-12-05T13:32:54-05:00 GitHub: Merge pull request #22 from ExtendLang/rm-
    micro
406 bfa906b 2016-12-05T13:28:03-05:00 oracleofnj: Fix off-by-one bug
407 eb8dd71 2016-12-05T13:20:03-05:00 oracleofnj: Address issues
408 f1b11ee 2016-12-05T12:46:35-05:00 Nigel Schuster: Skeleton for get_val
409 e4e5e26 2016-12-05T09:25:17-05:00 Nigel Schuster: Removed microc reference
    implementation
410 270da2b 2016-12-05T02:40:59-05:00 GitHub: Merge branch 'master' into fileio
411 b928e98 2016-12-05T02:40:10-05:00 Ishaan: Remove bloat
412 894b511 2016-12-05T02:32:49-05:00 Ishaan: Added testcase
413 62b8e83 2016-12-05T02:30:16-05:00 Ishaan: Added fwrite implementation
414 77a23ae 2016-12-05T01:39:30-05:00 Ishaan: Added read
415 46e9b58 2016-12-05T00:07:16-05:00 Ishaan: Make refactoring changes and new helpers
416 a5b9066 2016-12-04T14:00:30-05:00 GitHub: Merge pull request #20 from ExtendLang/lhs-
    all-ids
417 35e9471 2016-12-04T13:38:44-05:00 oracleofnj: Put back Id(s) as it was
418 641d454 2016-12-04T13:36:36-05:00 oracleofnj: Always transform to ID on LHS, even for
    LitInts
419 0e8398f 2016-12-04T13:23:27-05:00 oracleofnj: Transform all LHS expressions including
    integers to IDs; check for strings or range literals and disallow
420 f47f2ba 2016-12-04T10:30:44-05:00 oracleofnj: Add error handling to close() and add a
    couple test cases
421 e95a95a 2016-12-04T10:07:01-05:00 oracleofnj: Add assertSingleNumber and get_number to
    eliminate more copy & paste
422 543e720 2016-12-04T09:47:03-05:00 oracleofnj: Add new_number() to eliminate some copy
    and paste
423 d7f10c9 2016-12-04T02:31:03-05:00 Ishaan: Tentative drafts of fileio functions
424 7d81e43 2016-12-04T00:15:20-05:00 oracleofnj: add diagnostic printf
425 868d9a4 2016-12-03T23:46:01-05:00 Ishaan: Cleanup
426 aa1e014 2016-12-03T23:42:46-05:00 Ishaan: Add file pointer array
427 88d05de 2016-12-03T18:38:34-05:00 Ishaan: Working on fopen
428 36f5848 2016-12-03T14:07:39-05:00 oracleofnj: Merge branch 'master' into finish-
    transformations
429 2ae2b83 2016-12-03T14:06:40-05:00 GitHub: Merge pull request #15 from ExtendLang/
    stdlib-fun
430 7c78a23 2016-12-03T14:02:51-05:00 oracleofnj: Move test_fabs out of regression test
    suite
431 0a8055b 2016-12-03T13:48:19-05:00 oracleofnj: make test | grep REGRESSION
432 a24742b 2016-12-02T22:50:43-05:00 Kevin: Merged stdlib with master
433 5243c5a 2016-12-02T18:16:36-05:00 Kevin: Removed magic numbers and add fabs test
434 330bec3 2016-12-02T13:49:34-05:00 oracleofnj: Merge branch 'master' into finish-
    transformations
435 8a60995 2016-12-01T23:38:54-05:00 GitHub: Merge pull request #18 from ExtendLang/
    parser-error
436 f0d33e2 2016-12-01T23:18:39-05:00 oracleofnj: Move error handling
437 3b24c3a 2016-12-01T23:16:53-05:00 oracleofnj: Adjust test script
438 60a732f 2016-12-01T22:55:28-05:00 oracleofnj: Merge branch 'master' into parser-error
439 5dec6a2 2016-12-01T22:55:05-05:00 oracleofnj: Thank you Nigel!!!

    value_p
468 cf36f70 2016-12-01T09:47:38-05:00 oracleofnj: Sample digits function
469 4eed07 2016-12-01T01:02:56-05:00 Ishaan: Change print return type to empty
470 fa42f27 2016-12-01T00:41:47-05:00 Kevin: Fixed acos function
471 53d34ad 2016-12-01T00:29:32-05:00 Nigel Schuster: Moved double values type to numeric
472 f769c61 2016-12-01T00:18:07-05:00 Nigel Schuster: Merge branch 'sinner' into stdlib-
    fun
473 3986f38 2016-12-01T00:17:21-05:00 Nigel Schuster: Merge branch 'value_p' into sinner
474 5bd87f9 2016-12-01T00:14:45-05:00 Nigel Schuster: Explicitly declaring to link math
    library
475 4604545 2016-12-01T00:12:08-05:00 Nigel Schuster: Consistently using floats
476 38b9824 2016-11-30T23:46:14-05:00 Nigel Schuster: Merge branch 'value_p' into sinner
477 3303575 2016-11-30T23:45:25-05:00 Nigel Schuster: Explicitly declaring to link math
    library
478 31a74ec 2016-11-30T23:35:34-05:00 Nigel Schuster: Merge branch 'master' into value_p
479 7f0bc86 2016-11-30T23:04:34-05:00 Kevin: Finished remainder of stdlib
480 cd160df 2016-11-30T22:50:18-05:00 Kevin: Added more c functions to stdlib
481 e085977 2016-11-30T19:59:57-05:00 Nigel Schuster: Made sin function work
482 206ee5a 2016-11-30T19:07:28-05:00 Nigel Schuster: Moved all function signatures to
    value_p return value
483 effc20b 2016-11-30T18:45:52-05:00 GitHub: Merge pull request #12 from ExtendLang/easy-
    compile
484 3b6d7b7 2016-11-30T17:51:19-05:00 Nigel Schuster: Added script to compile and link

```

```

485 febcff8 2016-11-30T15:54:45-05:00 oracleofnj: Add oddball formula test case and try
    out theory for range literal
486 4a1ff4f 2016-11-30T14:54:05-05:00 oracleofnj: Finish reducing Ternary to
    ReducedTernary
487 8f0a981 2016-11-30T12:35:43-05:00 oracleofnj: Working on reducing ternaries
488 d3c5812 2016-11-30T02:39:58-05:00 oracleofnj: Finish desugaring switch
489 0a22713 2016-11-30T00:09:10-05:00 oracleofnj: Getting ready to ternarize switch
490 84f016a 2016-11-29T21:54:15-05:00 oracleofnj: Fix bug in switch() with default case
491 d331b7a 2016-11-29T17:33:41-05:00 oracleofnj: Give desugaring variables easier-to-read
    names for debugging purposes
492 36f8de5 2016-11-29T16:14:46-05:00 oracleofnj: Missed one
493 d96da34 2016-11-29T16:13:21-05:00 oracleofnj: Transform &&, || into ternary
    expressions to support proper short-circuit evaluation
494 3a8efbc 2016-11-28T23:05:28-05:00 GitHub: Merge pull request #9 from ExtendLang/func-
    calls
495 7a2af49 2016-11-28T20:33:53-05:00 Nigel Schuster: Removed another ocaml 4.3 dep
496 468e79f 2016-11-28T19:50:53-05:00 Nigel Schuster: Added ocaml 4.3 as dep for travis (
    hopefully this works)
497 a408761 2016-11-28T19:35:49-05:00 Nigel Schuster: Fixed String.equal
498 90c3caf 2016-11-27T22:52:14-05:00 Nigel Schuster: Fixed interpreter for now
499 a18da78 2016-11-27T22:42:27-05:00 Nigel Schuster: Added accidentally created file
500 5647312 2016-11-27T22:41:22-05:00 Nigel Schuster: Made extern function calls work
501 872aa8c 2016-11-27T13:52:44-05:00 Nigel Schuster: Merge branch 'func-calls' of https
    ://github.com/ExtendLang/Extend into func-calls
502 26ef1cc 2016-11-27T13:51:06-05:00 Nigel Schuster: Merging list of functions
503 877336f 2016-11-27T12:15:11-05:00 GitHub: Merge branch 'master' into func-calls
504 5b3edb0 2016-11-27T12:14:43-05:00 GitHub: Merge pull request #8 from ExtendLang/stdlib
    -template
505 374273f 2016-11-27T12:13:52-05:00 Nigel Schuster: Function calls work now
506 952aab8 2016-11-27T09:54:12-05:00 Nigel Schuster: Merge extern
507 ac6268f 2016-11-26T23:06:00-05:00 Nigel Schuster: Boxing ints, added unop sizeof,
    actually returning subrange not dummy object
508 ca07be3 2016-11-26T21:27:19-05:00 Nigel Schuster: Unboxing hello world to and from
    subrange
509 aef6c19 2016-11-26T16:55:48-05:00 Nigel Schuster: Made Hello World somewhat workable
510 cfb637e 2016-11-25T18:27:37-05:00 Nigel Schuster: Fixed faulty setup on call
511 ebf926a 2016-11-25T17:48:57-05:00 Nigel Schuster: Added template in C
512 554fbb2 2016-11-23T22:28:29-05:00 oracleofnj: Better error message for WrongNumberArgs
513 f09e40e 2016-11-23T12:47:39-05:00 oracleofnj: Make sequence work
514 053980b 2016-11-22T16:02:27-05:00 oracleofnj: Actually commit all the extern stuff
515 0e0fa23 2016-11-22T14:36:54-05:00 Nigel Schuster: Added extern in Ast
516 aac63be 2016-11-21T23:52:25-05:00 oracleofnj: Better duplicate definition checking
517 08e2d07 2016-11-21T23:29:28-05:00 oracleofnj: Check assertions before evaluating fn
    return expression
518 69fa332 2016-11-21T18:01:23-05:00 oracleofnj: Add size assertions
519 22541c4 2016-11-21T12:48:34-05:00 oracleofnj: Fix bug in Call()
520 9a1d24b 2016-11-21T12:39:41-05:00 oracleofnj: Working on crazy bug
521 a485cee 2016-11-20T22:13:46-05:00 oracleofnj: Add test case for foo([m, n] arg)
522 10afe9a 2016-11-20T22:07:17-05:00 oracleofnj: Expand function signature
523 325e9ba 2016-11-20T18:53:52-05:00 oracleofnj: Well, this is awkward
524 0a76dc9 2016-11-20T18:41:12-05:00 oracleofnj: Add check of return value
525 488e34e 2016-11-20T18:31:39-05:00 oracleofnj: Add sample #1
526 93eebc5 2016-11-20T18:27:23-05:00 oracleofnj: Add semantic checking to make sure
    functions and variables on RHS exist
527 881f164 2016-11-20T17:22:40-05:00 oracleofnj: Check RHS slice to ensure end > start,
    otherwise evaluate to empty

```

```

528 442ae91 2016-11-20T11:42:54-05:00 GitHub: Merge pull request #73 from Neitsch/
    interpreter-global
529 f7f701d 2016-11-20T11:30:06-05:00 Nigel Schuster: Added use of global variables to
    interpreter, fixed specs for logical or and and testcases with empty
530 367bc2b 2016-11-20T00:33:17-05:00 GitHub: Merge pull request #72 from Neitsch/codegen-
    part-app-fix
531 bdca834 2016-11-20T00:31:04-05:00 GitHub: Merge branch 'master' into codegen-part-app-
    fix
532 e956238 2016-11-20T00:28:49-05:00 GitHub: Merge pull request #71 from Neitsch/tc-fixes
533 9b742d1 2016-11-20T00:24:39-05:00 Nigel Schuster: Fixed partial function application
    warning
534 32f2989 2016-11-20T00:20:51-05:00 GitHub: Merge branch 'master' into tc-fixes
535 f87cb94 2016-11-20T00:20:35-05:00 GitHub: Merge pull request #69 from Neitsch/
    regression-tests
536 842ee5a 2016-11-20T00:18:56-05:00 GitHub: Merge branch 'master' into regression-tests
537 6d73717 2016-11-19T23:55:35-05:00 GitHub: Merge pull request #66 from Neitsch/fix-test
    -cases
538 05f317a 2016-11-19T22:37:36-05:00 Nigel Schuster: Fixed output on TCs
539 aa1d974 2016-11-19T22:33:40-05:00 Nigel Schuster: Fixed expected value for ternary
540 ab7653a 2016-11-19T22:32:27-05:00 Nigel Schuster: Fixed import testcases
541 848066c 2016-11-19T22:24:55-05:00 Nigel Schuster: Moved testcase asset to asset folder
542 53c9206 2016-11-19T22:21:48-05:00 Nigel Schuster: Corrected use of global variable in
    test_globals
543 5fe74a8 2016-11-19T22:21:00-05:00 Nigel Schuster: Fixed expected output for
    test_access_column_cells
544 214ab9d 2016-11-19T22:10:33-05:00 Nigel Schuster: Merge
545 fb31505 2016-11-19T22:08:42-05:00 Nigel Schuster: Passing testcases are in separate
    directory. Output of stats
546 5e39ba7 2016-11-19T21:55:03-05:00 Nigel Schuster: Merge
547 25263fe 2016-11-19T21:51:31-05:00 Nigel Schuster: Removed travis from build, removed
    super verbose output
548 0554ad9 2016-11-19T21:42:28-05:00 Nigel Schuster: Using precise lli version
549 04e5c4a 2016-11-19T18:30:32-05:00 oracleofnj: Add more operators to interpreter
550 e4a190c 2016-11-19T17:14:04-05:00 oracleofnj: Add argument to main and remove
    _expected from filenames
551 7cd2b3a 2016-11-19T16:53:12-05:00 oracleofnj: Merge branch 'master' into fix-test-
    cases

testing_list
616 6e42afa 2016-11-17T00:27:13-05:00 GitHub: Merge branch 'master' into testing_list
617 e40734b 2016-11-16T23:25:01-05:00 Ishaan: Added more test scenarios
618 41ef578 2016-11-16T17:50:03-05:00 GitHub: Merge pull request #49 from Neitsch/consume-
command-line-args
619 3cbf089 2016-11-16T17:45:58-05:00 oracleofnj: Fix merge conflict
620 1570836 2016-11-16T16:51:05-05:00 GitHub: Merge pull request #45 from Neitsch/doc
621 a8fbced 2016-11-16T16:38:49-05:00 Nigel Schuster: Fixed minor syntax error
622 c2f37c8 2016-11-16T16:30:43-05:00 Nigel Schuster: Merge
623 2fa73be 2016-11-16T16:05:37-05:00 oracleofnj: Set return code to length of argv[1]
624 bc21af6 2016-11-16T15:54:12-05:00 Ishaan: Added initial testing list
625 cd0d156 2016-11-16T15:50:39-05:00 oracleofnj: Start processing command line args
626 4a1fcac 2016-11-16T13:55:46-05:00 GitHub: Merge pull request #46 from Neitsch/number-
type
627 f1b481e 2016-11-16T11:04:44-05:00 Nigel Schuster: Added number type that defaults to
int
628 8944b9a 2016-11-16T00:19:33-05:00 GitHub: Merge pull request #44 from Neitsch/fix-arg
629 92fb7a3 2016-11-15T23:57:37-05:00 Nigel Schuster: Added a little documentation
630 bcbde36 2016-11-15T23:49:07-05:00 GitHub: Merge branch 'master' into fix-arg
631 fa1741a 2016-11-15T23:03:23-05:00 GitHub: Merge pull request #43 from Neitsch/more-
llvm-gen-js
632 57b2162 2016-11-15T22:39:38-05:00 Nigel Schuster: Using subranges instead of ranges
everywhere
633 9407677 2016-11-15T22:31:03-05:00 oracleofnj: Add hash table for common functions and
add dereference-the-range
634 46elfd5 2016-11-15T21:38:51-05:00 oracleofnj: Eliminate some copy & paste
635 660c049 2016-11-15T20:54:33-05:00 GitHub: Merge pull request #42 from Neitsch/llvm-gen
636 25b23cd 2016-11-15T17:23:54-05:00 Nigel Schuster: Fixed column retrieval for 1x1
637 3f02203 2016-11-15T17:17:02-05:00 Nigel Schuster: Fixed tests
638 26b8fcf 2016-11-15T17:15:08-05:00 Nigel Schuster: Merge
639 e347a87 2016-11-15T17:12:26-05:00 Nigel Schuster: Using more generic flag for values
640 aed28b3 2016-11-15T17:08:07-05:00 oracleofnj: Add is_subrange_1x1
641 cf5cbf0 2016-11-15T14:51:40-05:00 oracleofnj: Merge branch 'llvm-gen' of https://
github.com/Neitsch/plt into llvm-gen
642 c71d469 2016-11-15T14:51:19-05:00 oracleofnj: Replace String.equal with =
643 4b34abd 2016-11-15T14:41:37-05:00 GitHub: Merge branch 'master' into llvm-gen
644 a80a6d0 2016-11-15T14:41:07-05:00 oracleofnj: Add compile option to main
645 8ad5a19 2016-11-15T14:33:40-05:00 GitHub: Merge pull request #40 from Neitsch/
interpreter
646 3f0362a 2016-11-15T14:28:44-05:00 GitHub: Merge branch 'master' into interpreter
647 c0c95a2 2016-11-15T14:16:13-05:00 Nigel Schuster: Merge
648 d5f4024 2016-11-15T13:44:44-05:00 Nigel Schuster: Moved failing TCs

```

649 42fd9ef 2016-11-15T12:21:57-05:00 oracleofnj: Fix bug in import
650 9c567c9 2016-11-15T11:11:30-05:00 Nigel Schuster: Working on imports, fixed most
    testcases
651 aa61ac9 2016-11-15T09:31:42-05:00 Nigel Schuster: Allocating scope object
652 cf1ebf9 2016-11-13T23:09:30-05:00 oracleofnj: Rewrite main to take options; fix bug
    where import didn't know about first filename
653 5749538 2016-11-13T21:59:28-05:00 Nigel Schuster: Added main function
654 d6daff3 2016-11-13T20:26:14-05:00 GitHub: Merge pull request #41 from Neitsch/
    LRM_String_Update
655 0a5d484 2016-11-13T18:45:29-05:00 oracleofnj: Revert "Generating function header"
656 6afe599 2016-11-13T18:44:58-05:00 Ishaan Kolluri: Added changes relating to strings.
657 137d7e2 2016-11-13T18:39:33-05:00 oracleofnj: Merge branch 'interpreter' of https://
    github.com/Neitsch/plt into interpreter
658 118bfc5 2016-11-13T18:38:34-05:00 oracleofnj: Allow single slice on RHS; make hashtag
    work
659 e376270 2016-11-13T17:55:41-05:00 Nigel Schuster: Added type arguments for functions
660 5cfb519 2016-11-13T17:26:23-05:00 Nigel Schuster: Set more types up
661 bf1d8bb 2016-11-13T15:30:35-05:00 Nigel Schuster: Merge branch 'interpreter' of https
    ://github.com/Neitsch/plt into interpreter
662 f83a0bc 2016-11-13T15:30:28-05:00 Nigel Schuster: Generating function header
663 3addcc8 2016-11-13T14:38:11-05:00 oracleofnj: Make size(expr) an operator instead of
    built-in function
664 9a74e14 2016-11-13T14:22:44-05:00 oracleofnj: Changing size() to be an operator
665 d6d2eaa 2016-11-13T00:08:41-05:00 oracleofnj: Add closure to interpreter_variable
666 64fba82 2016-11-12T22:38:39-05:00 oracleofnj: Added bsearch to show logic bug
667 66ffdb1 2016-11-12T19:21:07-05:00 oracleofnj: Add alpha version of function calls
668 376b29a 2016-11-12T17:17:23-05:00 oracleofnj: Add string as value type
669 08c61ee 2016-11-12T17:14:47-05:00 oracleofnj: Clean up discrepancies
670 a18d5fc 2016-11-08T11:38:22-05:00 oracleofnj: Fix bug with x[-1]
671 962f812 2016-11-07T23:27:08-05:00 oracleofnj: Refactor scope for interpreter; resolve
    variables on demand; make selections work properly
672 47bbef1 2016-11-06T22:05:55-05:00 oracleofnj: Minor adjustments to interpreter to work
    with mapped AST
673 fddc6bc 2016-11-06T18:32:17-05:00 oracleofnj: Eliminate extraneous nulls in JSON
674 ffddb17 2016-11-06T18:15:40-05:00 oracleofnj: Turn statement and function lists into
    StringMaps
675 6810003 2016-11-05T19:47:57-04:00 oracleofnj: Fix pattern matching warning
676 7107a46 2016-11-05T18:01:34-04:00 oracleofnj: Add function to check range literals for
    legality at parse time
677 80b13d1 2016-11-05T15:13:10-04:00 oracleofnj: Handle selections better
678 6cbb009 2016-11-04T15:48:58-04:00 oracleofnj: Count to 1,000,000 using tail-recursive
    versions of List.map and cartesian product
679 9b2252d 2016-11-04T15:25:13-04:00 oracleofnj: Show enter and exit
680 3585e43 2016-11-04T02:21:38-04:00 oracleofnj: See how high it can count recursively
681 38cf541 2016-11-04T02:15:50-04:00 oracleofnj: Get the easy parts of the interpreter
    working
682 5d81d6e 2016-11-03T17:17:51-04:00 oracleofnj: Start working on interpreter
683 0078cee 2016-11-01T23:40:57-04:00 oracleofnj: Got a non-tail-recursive version of
    topological sort working
684 85df175 2016-11-01T15:39:10-04:00 oracleofnj: Irrelevant highlighting thing
685 84c719a 2016-11-01T14:39:49-04:00 oracleofnj: Rearrange nested functions
686 557dc4e 2016-11-01T13:50:52-04:00 oracleofnj: Add circular import test case
687 c476798 2016-11-01T13:35:46-04:00 oracleofnj: Fix syntax errors
688 af5a31d 2016-11-01T13:31:49-04:00 GitHub: Merge pull request #37 from Neitsch/import-
    rec
689 d451cc4 2016-11-01T13:31:33-04:00 GitHub: Merge pull request #38 from Neitsch/import-

795 7542b5d 2016-10-20T11:16:35-04:00 Nigel Schuster: Added dimension section
796 995cf83 2016-10-19T12:28:09-04:00 Nigel Schuster: Started working on Functions
797 40c2a5a 2016-10-19T03:43:06-04:00 ishaankolluri: Initial LRM Commit part 1
798 02a5c17 2016-10-18T18:38:21-04:00 Ishaan Kolluri: Added LRM initial info
799 d8794e9 2016-10-17T19:47:42-04:00 GitHub: Merge pull request #9 from Neitsch/
    documentation
800 70aalb9 2016-10-16T13:36:23-04:00 Nigel Schuster: Added PDF Latex template
801 5111202 2016-10-14T19:59:45-04:00 GitHub: Added a bunch of stuff to the grammar: (#8)
802 da967e4 2016-10-12T13:24:50-04:00 Jared Samet: CFG Grammar (#6)
803 fea4e4b 2016-10-08T11:42:39-04:00 GitHub: There is no need to constantly build all
    branches. (#2)
804 7a5ccfc 2016-10-08T11:31:31-04:00 Nigel Schuster: Added greeting and newlines (#4)
805 10b17f7 2016-10-08T11:31:08-04:00 GitHub: Imported microc (#5)
806 726456f 2016-09-20T09:45:07-04:00 Nigel Schuster: [test] Add sample greeting to repo
    (#3)
807 9a2183d 2016-09-15T18:44:00-04:00 Nigel Schuster: Added merlin config
808 163e176 2016-09-14T18:51:53-04:00 Nigel Schuster: Moved whole build to script
809 d401eea 2016-09-14T18:43:58-04:00 Nigel Schuster: Added oasis opam package
810 ba7fd9c 2016-09-14T18:38:58-04:00 Nigel Schuster: Added ocaml configure (maybe this
    helps travis)
811 a461eae 2016-09-14T18:26:10-04:00 Nigel Schuster: Configuring opam environment for
    travis
812 ba2df2f 2016-09-14T18:19:26-04:00 Nigel Schuster: Added ocaml native compiler to apt
    package list
813 a8e5958 2016-09-14T17:24:36-04:00 Nigel Schuster: Added some more (possibly necessary
    opam packages
814 c54f5e3 2016-09-14T17:18:32-04:00 Nigel Schuster: Missed opam option

```

```
815 b10adf0 2016-09-14T17:13:57-04:00 Nigel Schuster: Fixed opam install
816 124f7f3 2016-09-14T17:08:09-04:00 Nigel Schuster: Fixed YML error
817 4909fa8 2016-09-14T17:03:54-04:00 Nigel Schuster: Using avsm source
818 4b24046 2016-09-14T16:58:33-04:00 Nigel Schuster: Allow sudo
819 e7b50db 2016-09-14T16:56:57-04:00 Nigel Schuster: Fixed setup order
820 f6d7ac4 2016-09-14T16:50:02-04:00 Nigel Schuster: Manually installing apt packages
821 f4084ab 2016-09-14T16:40:55-04:00 Nigel Schuster: Test commit
822 d7c5e9a 2016-09-14T13:15:43-04:00 Nigel Schuster: Initial commit
```

10. Special Thanks

We'd like to thank Bruce Verderaime for the [gdchart](#) library, which we modified and shipped to provide Extend with graph plotting functionality. Additionally, we'd like to credit Thomas Boutell for the `gd` library, on which `gdchart` relies. The copyright notice is in the repository.
